

Having

25⁺ years

experience in Application Development vary from critical and core system to new business initiative along with cloud adoption has brought unique expertise and services that corporate need to sustain in this new VUCA era.

PT. Ecomindo Saranacipta

Establish Digital Ecosystem

Within the last few years, Ecomindo has assisted organizations to realize their vision to have competitive and innovative advantage among their competitors. Based on our experience, some of the challenges that business and IT will have are

Organization culture with “waterfall mindset” that may not be aligned to deliver business initiative within months instead of year.

Needs for legacy system can still be used and integrated into the modern architecture.

Enable effective experimentation and rapid iteration, to minimize risk and faster feedback cycles.

Creating a platform that scale as per business growth, be as small as possible when initiated and scale as needed once the initiative is validated (and can be monetized).

Ensure availability and uptime of the system to meet business objective.

As part of establishment of digital ecosystem, Ecomindo offers below services to make sure customer has confidence starting their initiative and a long-time partner that can be trusted as the business grows.
