

Introducing

eMission Cloud View

An Energy Efficiency & Emissions Solution by Publicis Sapient

Fast, accurate emissions and energy data for your entire organization - all in one place.

The need to monitor, report and reduce energy and emissions is increasing for most organizations. eMission Cloud View is the answer. A Cloud-based solution that uses ML and AI to provide real-time data and forecasting for internal and external stakeholders and help you navigate towards Net Zero:

- Helps you to manage greenhouse gas emissions across your enterprise
- Enables you to identify opportunities to drive OPEX savings and reduce energy consumption
- Allows accurate and timely reporting of emissions
- Helps present and review investment considerations to the investor community
- Supports 3rd party emissions verifications and assessments
- Supports internal/external energy efficiency audits and assessments

The Six Modules: Our solution allows data modeling across these six areas.

Energy Efficiency and Emissions Reporting:

Standardizes reporting to understand cross value chain contributions from a corporate to a facility level.

Operations and Process Optimization:

Makes recommendations for actions that can be taken to reduce emissions, plus for cost savings through process optimization.

Forecasting and Benchmarking:

Enables stakeholders to understand key emissions drivers across the portfolio. Shows which drivers are leading to inefficiencies. Allows internal and external benchmarking.

Emissions Lifecycle Management:

Helps digitize workflows relating to energy and greenhouse gas management and saves manual inputting.

Auditing:

Identifies anomalies and outliers, which indicate misreporting of metrics and could lead to costly non-compliance.

Emission Modeling:

Identifies technical assumptions behind metrics and quickly updates them as things change i.e. regulatory changes.

Interested?

Let's talk about how **eMission Cloud View** could benefit your organization.
