

# POWER BI SENTINEL

'The Power BI Toolkit'

## What Is It?

Sentinel is a Software as a Service application that sits alongside your PowerBI.com account, enhancing your use of Power BI.

## What Does It Do?

**Automated Backups:** You configure which reports you want backed up, and Sentinel automatically backs up the PBIX files to your Azure blob storage account. You can then roll back, recover deleted reports, etc.

**Change Tracking:** Sentinel scans the metadata structure of your reports, and allows you to compare different versions over time. This can help track down why and when something broke or changed.

**Data Lineage:** Power BI can become quite unwieldy when you have a lot of datasets/reports. Sentinel provides easy and quick visibility of what data sources are being used, and by which datasets/reports. This helps you manage your data governance, GDPR, etc. more effectively.

**Automated Documentation:** Sentinel provides in-browser documentation of your datasets; the table structure, relationships, measures and calculated columns. It also provides a PDF download for offline use.

## Who's It for?

The **free\* Community** licence is for anyone who wants to save time generating documentation, or tracking what they've changed within their own reports.

\*This is available after signing up to Professional for the first month.

The **Professional** licence is for Power BI power users; it adds documentation download and backups; designed for those who want a safety net of disaster recovery, and also supports Shared Workspaces.

The **Enterprise** licence is for companies who want to provide the functionality to all of their Power BI users, Data Lineage helps corporate data compliance management, and an enterprise wide backup policy provides a complete disaster recovery plan for the organisation.

	Community	Professional	Enterprise
