# Power Platform Center of Enablement

Enable the low-code revolution

500m apps will be built in the next 5 years, yet the majority of organizations struggle to find the technical talent to build apps. Activating citizen-developers and having them work alongside IT Pros and code first developers in an integrated CoE can revolutionize application portfolios and business processes. Getting this model right can be a delicate balance as organizations are pressed to do more with less.

- **Administrative necessity vs. business imperative**
  An ineffective CoE can stifle ingenuity and encumber business units with overarching policies and procedures that are separated from business outcomes and objectives

- **Insufficient focus on change management**
  Citizen-development is more than a set of low-code tools, it's a fundamental shift in the way that work is done, and it can permeate every process in place – it's essential that change management is top of mind

- **Limited exec and key stakeholder engagement**
  On-going engagement from key stakeholders is essential to continued growth an adoption as low-code becomes a key strategic initiative within the organization and major channel for innovation

- **Lack of demonstrable return**
  Developing a repeatable process to capture return on investment, efficiencies and business impact is paramount for a successful center of enablement

The solution

Unleash your organization's full potential with the Power Platform Center of Enablement

How a Low Code COE can impact your organization

The Power Platform Center of Enablement (CoE) combines our deep industry capabilities, services, and technology experience with Microsoft's intuitive and extensible low-code tools. We bring a holistic approach to fuel innovation across organizations to **drive proven and defined outcomes.**

Citizen-led innovation is more than tools and tech - it's a hearts and minds campaign and one that can **fundamentally transform both your culture and organization**. We do not have a one-size fits all approach around an operating model - our goal is to develop one that is **uniquely personal to you**. This is not rolling out a new set of tools that will only be replaced in a matter of months or years - this is a cultural shift in embracing new ways of working, challenging the status quo and **fueling innovation from within**.

Key benefits

1 — **Drive innovation at scale** through empowering your workforce with an intuitive and integrated set of low-code tools

2 — **Capture and realize value** by turning great ideas into transformative solutions that have real business impact

3 — **Maximize investment** by leveraging a connected set of tools with over 650 pre-built connectors to leading business applications

4 — **Control and govern** through tools that are natively built on Azure and inherit enterprise-grade security, certifications, and administrative controls

Case study

Leasing Document Extraction Automation

Challenge

A Property Management client used a very manual process to read, document, and review key terms across tens of thousands of leasing documents. Issues with current process were as follows:

- Inability to proactively detect unfavorable leasing arrangements and terms
- Cycle times to review key terms from leases took on average over a week
- Reporting on key data wasn't real-time enough to make decisions

Solution

The solution was developed with the Microsoft Power Platform utilizing a Canvas App, Power Automate, AI Builder for the lease data extraction, and Dataverse as the backend. The solution had user role management and various levels of approval options for the users. The solution integrated and automated the process of saving the leases to SharePoint as well as automated the extracted values into the client's ERP through standard connectors available in the Power Platform.

Results

With 10K leases and 23K amendments processed per year, this portal will save **40,000 hours per year** and **generate ROI of $1.2M.** There is an anticipated volume growth of 10% year over year and a potential to expand globally. Besides hours savings there is savings seen on processing times as well as a significant increase in quality.
