Our Solution for your Challenges

M365 Baseline Check helps your organization to improve the security level of your Microsoft cloud environment.

Get a deep insight at your settings and activities and compare them with a security baseline created by PwC. You get recommendations based on your cloud risks and your alignment with security best practices.

Visibility
Understand cloud security objectives and risks and get deep insights across all your Microsoft cloud settings, activities and resources.

Control
Get a Microsoft license and product independent control framework based on cloud security best practices and different standards like COBIT, NIST, ISO27017, CIS Controls, BSI.

Guidance
Increase security with built-in intelligence and recommendations that you can take to protect your environment without impacting user productivity.

Challenges

- You might be unable to know the level of security in your M365 SaaS cloud environment.
- You use M365 E3/E5, EMS or Windows licenses and are not aware about all security features included.
- You might want to compare your security status with current best practices and standards.

Solution

- Use M365 Baseline Check to understand your current cloud security configurations and processes.
- Get deeper insights about your M365 cloud security services and all advanced features behind them.
- Discuss main risks and recommendations as well as quick wins from the resulting report.
- Based on a roadmap showing all recommendations within a time-related context you can design your own cloud security program.

Your Benefits

Azure baseline Check provides an overview of the cloud security situation and tailored recommendations for its optimization.
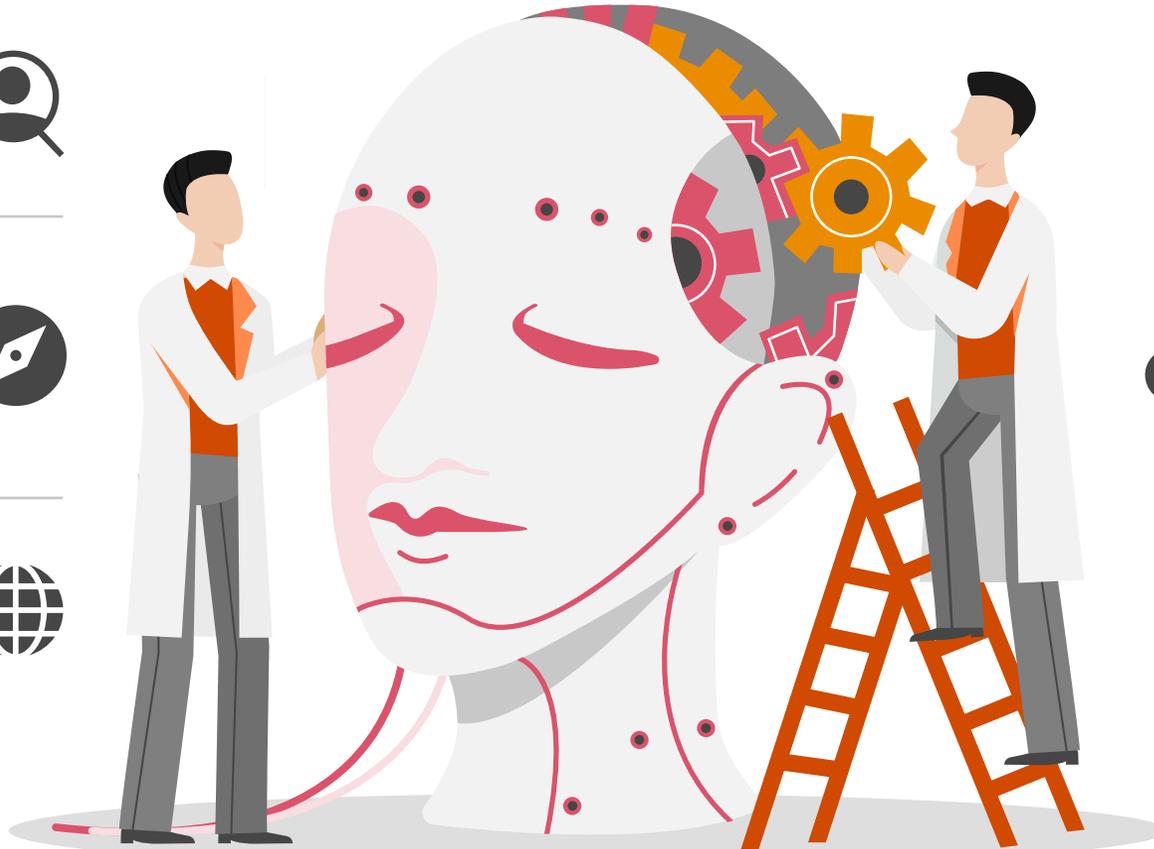

Microsoft independent control framework based on **best practices** and standards

40+ **easy to implement** technical controls for a secure first baseline

Step 1 of the holistic Cloud Assessment Suite for **tailored** Microsoft security

Extended scope beyond technical controls including associated cloud processes

An simple cloud security roadmap including quick-wins to **rise security** in your cloud environment

Streamline your security service/tool portfolio with unused security features **already integrated in your license**

M365 Baseline Check…

…is part of the overall PwC Cloud Assessment Suite (CAS) for a holistic cloud security
