

Data Platform Modernization Jumpstart

As IT and data management teams continue to face more demands for cost efficiencies, scale, reliability and security, they have started realizing that addressing all these imperatives is increasingly difficult with legacy and siloed systems.

Challenges with the current legacy environment and a growing need to take advantage of the Cloud means the question organizations are asking is not 'if' but 'how' they should modernize their infrastructure?

Most organizations cannot just set-up new infrastructure for innovation and agility. They must work through, and around existing systems. Modernizing these systems, especially those which host data, can be complex and disruptive, with key concerns around strategy, execution process, performance, security, governance, and cost benefits of the new environment.

Accelerate your data platform modernization journey with confidence

Our data platform modernization jumpstart engagement helps you address these challenges. Through a high-intensity engagement comprising of assessment and hands-on execution, we ensure that you are armed with the knowledge to make the transition to the cloud with confidence.

Our Delivery Process

 <p>Discover</p> <p>Understand your data landscape and inventory SQL database assets and application stack.</p>	»	 <p>Assess and Prepare</p> <ul style="list-style-type: none"> Conduct a technical review of the current data infrastructure to understand complexities, dependencies, licensing, and in-house expertise. Jointly explore Azure and design the Landing Zone for your workload. 	»	 <p>Migrate</p> <p>Implement the Landing Zone, convert source schema to work in the target, and migrate necessary schema, data, and objects, followed by data sync and cutover after testing.</p>	»	 <p>Train</p> <p>Train the team on Azure Data Services and hand-off the platform to your team.</p>
--	---	---	---	---	---	--

Final Deliverables

 **Duration: 3 Weeks**  **Cost: \$25,000**

 <p>Assessment report of up to 5 SQL databases, along with recommendations to fix them.</p>		<p>Fully operational and secure cloud environment for your SQL workloads.</p>	 <p>Documentation of new environment: Scripts, credentials and any other knowledge transfer</p>
