

KISS BUGS GOODBYE

Do any of these sound familiar?

We spend more time fixing bugs than shipping features!

It takes days to QA each release!

There aren't enough people to maintain our tests!

We can help with that

QA Wolf gets web applications to 80% end-to-end automated test coverage in weeks not years.

80%

E2E test coverage in 4 months

Anything from third-party integrations to extensions to visual diffing. All in exportable, open-source Playwright code.

3 min

Pass/fail results

We run your whole suite in parallel on our cloud. There's no infrastructure to manage or hidden fees for test runs.

100%

Flake free

There's a 24-hour team of QA engineers reviewing every failed test, reproducing and filing bugs, and fixing broken tests.

"My only regret with QA Wolf is that I didn't know about them two years ago."

—Ed St. Louis, VP of Engineering @ Xima
