App Modernization with QDS to Transform and Migrate your Applications to Azure

Planning to migrate to Azure? Do you have any thoughts, like how to move your business-critical services securely and dependably to the cloud? If no, use our recommendations to get to see how to break down existing IT assets, evaluate what you have, recognize the advantages of moving specific services to Azure, and plan for a viable migration.

During the lifespan of every IT environment, to increase efficiency, maintain security and improve cost-effectiveness, enterprises must assess the best path to manage, simplify and optimize their application to modernize it.

QDS is helping customers to provide clear, precise, and well-monitored datacenter migration which has the power to change an organization's overall operating environment. These changes can have long-lasting effects on day-to-day efficiencies and overall business process and procedures.

Keys to success:
- Assessment for the overall applications in an environment
- Clear Road Map for Workloads, Data and Application Migration
- Improved Security
- Transformation
- Cost Savings
- Optimization

Application Modernization on Azure - at a glance!

With outdated application stacks and legacy deployment methods, IT teams struggle to keep up with changing business needs. At the same time, migrating your applications to a modern platform for cloud-native capabilities can be daunting. For organizations looking for a technology partner to help them migrate their existing on-premises applications to Azure Platform-as-a-Service, Insight provides a complete service with a best-practice approach to security, governance, and cost control.

QDS's service offering delivers the foundational framework for repeatable best practice Cloud Application Modernization, utilizing Microsoft architecture blueprints and Azure DevOps enabled Continuous Integration/ Continuous Delivery process. This offering is suitable for organizations who have undertaken the Insight Application Modernization assessment, to help understand your application landscape and determine the highest value applications to be modernized to Azure PaaS.
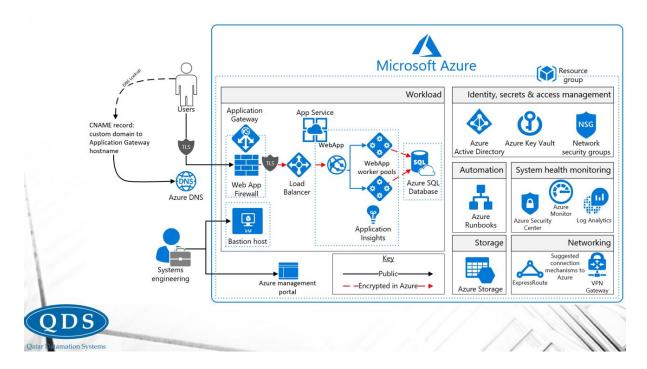

For several years we have been providing our customers with accelerated innovation and scale by leveraging agile methodologies and support companies of all sizes and industries in the planning, implementation and operation of IT infrastructure, management, and software solutions. We can do this and are always one step ahead of our competitors. Our team will evaluate your chosen app and will apply a human-centric approach to understand desired experiences and develop wireframe concepts, architecture recommendations, and cost estimates for future build and hosting with Microsoft Azure.

Overview & Deliverables:

- Conduct collaborative workshops to understand business challenges and needs
- Evaluate current application architecture and user experience
- Work with business and technical stakeholders to understand goals and requirements
- Provide high-level wireframe concepts
- Architecture recommendations
- High-level cost analysis for future application roadmap, build, and hosting with Microsoft Azure
- Trust QDS to seamlessly assume day-to-day cloud management and monitoring activities
- Access Azure intelligence with QDS's experts to explore customization options for Servers and Applications
- Bypass pre-packaged offers and partner with QDS to optimize Azure to your needs
- Rely on QDS as the extension of your in-house team
- Get MSP from our team available 24×7
