

MSP Acceleration Platform

Fortress revolutionary Open XMDR platform simplifies access to Enterprise security , built for secops teams and service providers.

Transforming managed security with a revolutionary UI standardization, enables MSPs to boost their growth.

With out-of-the-box, multilayered integration and orchestration of security operations, Fortress consolidates multiple layer multi vendor solution.

First "pick-n-play" enterprise cybersecurity marketplace, setting new standards in innovation. Pick a New solution or connect existing services.

Merlin AI™ provides decision-making and recommendations-without any manual input.

Merlin AI™ simulates a human Reasoning activities allows for automation of in-depth investigation of multiple data sets , analyzing information and output it into relevant models and determines the best recommended action.

Key Benefits

Consolidate and operate cyber technologies tools and alerts under one dashboard

Automate mitigation to eliminate cyber-attacks in minutes

Utilize MerlinAI to find unknown, stealth or sophisticated attacks, improving end customer defense

Offer cutting edge technologies by accessing Fortress' enterprise-grade marketplace

Automatically protect clients from known threats, using data fusion and cross-correlation prevention technology

Automatically analyze and correlate alerts visualize full attack path of malicious operations

Redirect the SOC team to focus on the most important alerts

No up front costs, flexible control of licensing match SMB needs

Product Offering

MSSP-in-a-BOX for Managed Service Providers:

Provide Cyber-as-a-Service to enable end customers to check security off their list.

Provide enterprise-grade security with best of breed security technology.

Services

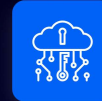

Endpoint Protection

Secures all devices against ransomware, malware, zero day, and fileless attacks and more.

Mail Protection

Blocks phishing, spoofing, malicious attachments, and more. We scan all cloud storage and drives to ensure no malicious files are present.

Cloud drive protection

Fortress ensures your cloud environment is secure by continuously scanning all cloud storage and drives to eliminate malicious files.

VMDR

VMDR identifies misconfigurations and critical vulnerabilities on applications, operating systems, and other devices within the organization.

Attack Simulator

Continuously monitor and measure the risk of attack paths, and prioritize by urgency level.

Web Protection

Use Fortress to prevent access to restricted or phishing sites and stop download of malware or malicious files.

About Fortress:

Fortress is an **Open XMDR platform** for Enterprise SecOps teams and service providers, a unified system that uses insights about external and internal threat landscapes to analyse attack methodologies, threat actors and existing vulnerabilities to create the strongest possible response, eliminating weaknesses and mitigating attacks.

Fortress is rewriting the rules of the game. We're bridging the cyber gap by giving **MSPs and MSSPs access** to cutting edge security tools and management capabilities, so they can easily defend and protect their customers.

Fortress was developed to **enable simplified access to Enterprise-grade Security**. For MSPs & SMBs who seek to get high visibility and responsivity without the required investment. As **veterans of the Israeli** cyber industry, we have spent decades tackling the complex security challenges that businesses face today.

We're dedicated to empowering service providers by providing them with **holistic protection and coverage for SMEs** that is catered to their unique security needs and challenges.
