

CLOUD TRANSFORMATION ASSESSMENT

Quadra **Nubis**
Cloud Transformation Assessment

BASED ON THE
AZURE CAF FRAMEWORK

THE BUSINESS CASE

- More than \$1.3 trillion in IT spending will be affected by the shift to the cloud by 2022.
- 94% of enterprises use the cloud
- 66% of enterprises already have a central cloud team or cloud center of excellence

A robust and resilient cloud adoption model is the foundation for business agility and growth.

THE CHALLENGES

- Most enterprises still stick to a traditional IT model, rooted in legacy processes, tools and systems.
- Cloud adoption is considered as a bolt-on strategy, and not a holistic operating model
- The risk of failure is increasing because of complexity of IT architectures.

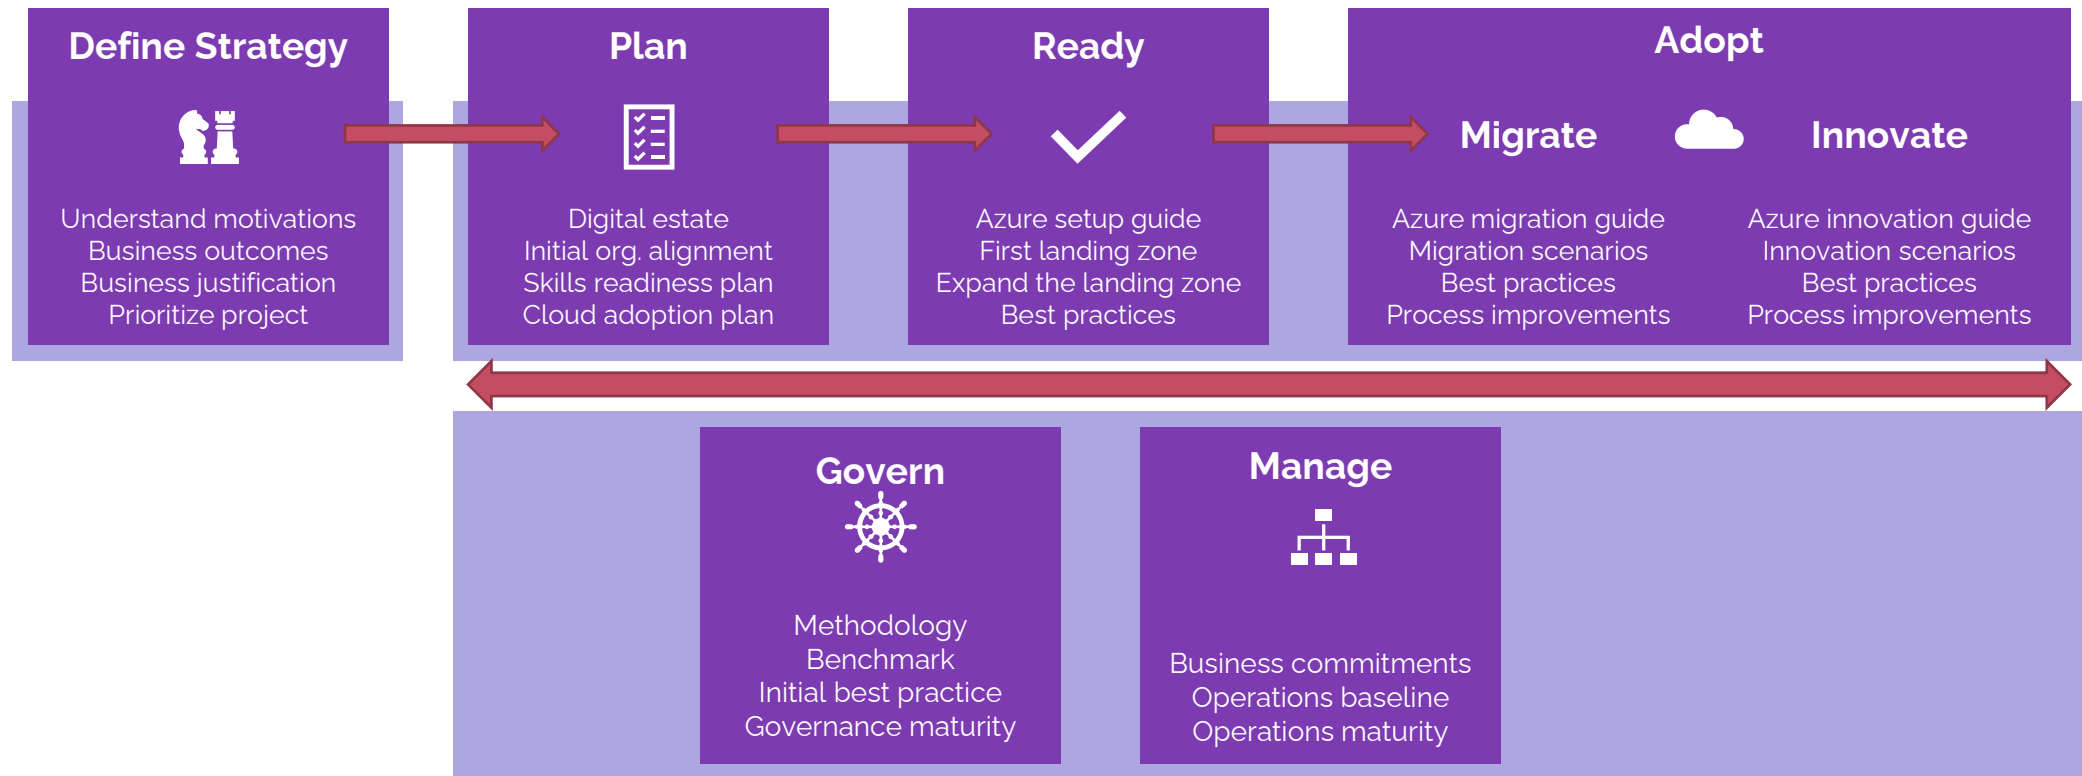

**IT needs to become a value-driver and
an enabler of business growth**

THE SOLUTION

- The **Cloud Adoption Framework (CAF)** is a collection of tools and documentation, built on real life experiences in helping businesses of all sizes move through the iterative cycles in leveraging the cloud.
- The foundational principle of CAF is to help adopt a growth mindset and build an agile, digital organization.

CAF helps you to build a digital operating model for your business

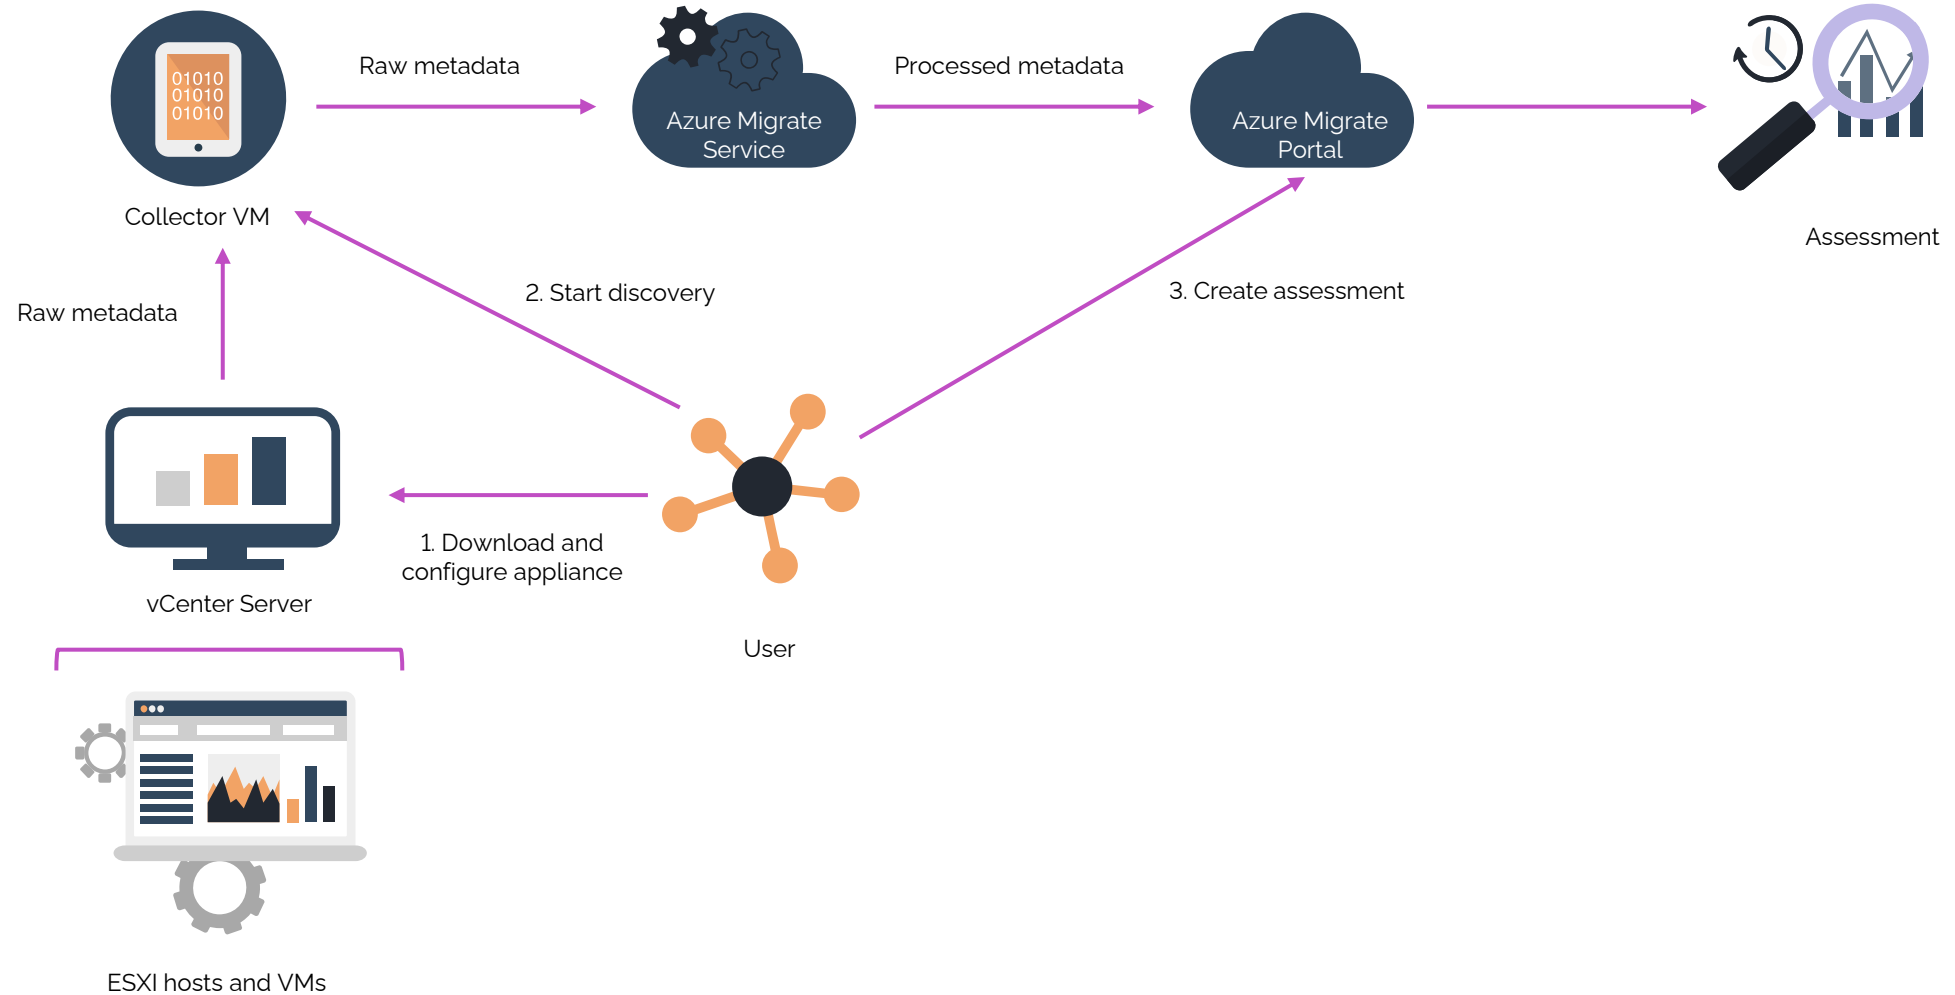

MICROSOFT AZURE CAF

GET CAF READY OFFER

- Outcomes of this 1-week assessment program are:
 - Assessment of the existing workloads
 - Compatibility of the existing workloads to migrate to Azure
 - Best hosting option for the assessed workloads
 - Cost estimation to run the workloads on Azure

WORKLOAD ASSESSMENT

BUSINESS BENEFITS

- Deliver an essential requirement for a successful cloud adoption and migration.
- Help you to assess workloads to check the compatibility, evaluate cost, modernization, and deployment tooling.
- Validate or challenging the assumptions made during earlier discovery and assessments by looking more closely at rationalization options.

**Help you choose the right 'R'
Rehost, Refactor, Rearchitect,
Rebuild or Replace**
