Modernise & Migrate to The Cloud With Confidence!

Place Your Business Modernisation Plan In the Hands of The Dynamics Experts with QUANTIQ's NAV to the Cloud Service

It's official. Business Central is Microsoft's modern ERP solution that's powering successful digital transformation across industry and commerce. Launched in April 2018, Business Central has proven itself to be a complete, end-to-end ERP package in the cloud and on-premise. This whole solution is flexible enough to work with any organisation, regardless of size or industry. And, priced per user, it's an affordable option full of the potential to grow or evolve depending on your needs.

But what if you already have NAV? To upgrade to something new, with a long future ahead full of seamless upgrades and promised future-developments, it can be hard to visualise what that process would look like. But we can do that bit for you. Our team are highly experienced at evaluating ERP systems, even ones with plenty of unique client specific developments, and especially those built on NAV. We've modernised and upgraded countless ERP systems over the years, so you can be sure we'll account for every one of your processes and operations when we assess your system and design your roadmap to Business Central. Interested in what our NAV to the Cloud packages can do for you...?

Two Specialist Services Available

The Upgrade Suitability Assessment

A 2-Day Assessment designed to assess your current NAV implementation and establish if the existing solution can be upgraded to Business Central, including consideration of all existing developments being migrated as Business Central extensions.

This package is suitable for you if you're using an older or very bespoke version of NAV and would like to measure if your organisation is eligible for a Business Central solution.

A 3-Stage Review, led by QUANTIQ, which includes:

- 2-hour call with our Consultant to review the usage of the system at a very high level
- Full-day Technical Review of software and developments
- An in-depth Upgrade Suitability Analysis document including:
 - Detail of the objects which have been modified in the existing NAV implementation
 - Which developments are
 - Suitable for migration to Extensions
 - Would need to be redesigned in order to work
- Recommendation on which product the client should upgrade to (Business Central (cloud), Business Central (On Premise), NAV 2018)
- License comparison between existing and recommended product

During this process, one of our Consultants measures your current NAV system as well as a high-level review your unique organisational usage of the system. Our Consultant will share their findings with one of our Developers to create a complete picture of your current NAV system, including all developments, before conducting a thorough Technical Review to measure the suitability for your developments to migrate as Business Central Extensions. Our expert consultants and developers are among the best in the world, with deep technical knowledge, so no system is too complicated. Our team are able to determine what the roadmap to Business Central will look like for your organisation, including options to upgrade from even the oldest and most customised NAV solutions.

The Upgrade Assessment Package

A 5-Day Assessment designed to fully evaluate your current NAV solution, with any and all existing developments, capturing what the process would look like for your organisation to upgrade to Business Central, including key considerations and functionality / process migration recommendations.

This package is suitable for you if you want to capture exactly what a move to the cloud would look like for your organisation with specific consultation around your unique functionality and process requirements.

A 3-Stage Review, led by QUANTIQ, which includes a Consultant reviewing your:

- Technology
- Onsite functional processes
- Custom functionality & developments measuring the suitability for Extensions & cloud deployment

During this process, one of our Consultants measures the three areas for review: your Technology, your Functional Processes and the Technicalities of your existing NAV solution. Throughout these reviews, our Consultant will share their findings with one of our Developers to create a complete picture of your current NAV system and determine what the roadmap to Business Central would look like for you. Our expert consultants and developers are among the best in the world, with deep technical knowledge, so no system is too complicated. Our team are able to discuss various options for Business Central upgrades for even the oldest or most customised NAV solutions.

As a Consulting organisation, we are passionate about ensuring our clients are best positioned to make the most of the Technology at their disposal. So, in addition to an overview of what an Upgrade would be like, our team will share some advice (specifically for your team, processes and context) on how you could simplify your processes, save time and raise productivity with a move to Business Central.

Key Service Features:

- Full initial review of your existing on premise system, processes & customisations
- Personalised upgrade suitability analysis & recommendations
- Project plan Roadmap based on the above including on boarding and training recommendations & financial projections to enable informed project financial reviews

NAV is on its way to retirement, so it's probably time to upgrade to a future-proofed solution. Think this is something that could benefit your Team? Find out more by contacting us through our website, or emailing info@quantiq.com.
