Create custom business applications
& automated connected workflows
without writing code

Solve existing pain points, modernise
highly customised workflows &
connect silos

Quickly resolve enterprise workflow
and reporting challenges

QUANTIQ's App in a Day

QUANTIQ's **App in a Day** workshops provide a day-long, hands on, immersive experience empowering organisations of all types and sizes to explore how "low code/no code" **Power Apps** provide incredible flexibility to create seamless, enterprise-grade solutions that streamline new or existing business applications cost-effectively.

In this all-day interactive training, your team will:

- Learn how to quickly create custom business applications and automated, connected workflows without writing code, leveraging the Microsoft Power Platform technologies: Power Apps and **Power Automate**.
- Explore How Microsoft Power Apps could be deployed within your organisation to solve existing pain points, modernise highly customised workflows and connect data silos.
- Understand how **Dataverse** technology from Microsoft can help you easily connect legacy and third party structured and unstructured data, to feed your new agile Power Apps solutions and quickly resolve enterprise workflow and reporting challenges.

The App in a Day Experience

App in a Day is a customer workshop delivered on a customer exclusive basis. It is designed to accelerate your team's Power Apps, Power Automate and Dataverse experience and allow you to quickly evaluate the suitability of the technologies for your organisation. QUANTIQ's App in a Day delivery commences with a preparatory call to discuss your aims for the workshop and understand your current experience of the Microsoft Power Platform to enable us to potentially adapt the workshop to your needs. We will present a high-level overview of the technology during this preparatory call to refresh your knowledge.

In the workshop Delegates will build at least one Power App to address a real time business issue using key Power Apps features such as **Model Driven Apps**, **Canvas Apps** and leveraging **Dataverse** (previously the **Common Data Service** CDS).

- All training will be delivered by QUANTIQ's Power Platform Consulting Team. Your team just need to bring their Windows-based device and we will supply the course material.
- Post-delivery of the workshop we will engage the delegates to review their experience and discuss next steps on their Power Apps journey

Why Consider App in a Day?

App in a Day is recommended for any type of organisation where there are challenges with existing business applications, that may require- costly customisations or highly specific and/or complex workflows. Organisations with siloed applications, where manual interactions are currently required to connect or manage input and outputs, are particularly encouraged to attend.

- **100% funding is available** from Microsoft for qualifying organisations. In this case, QUANTIQ will manage the application and approval process on behalf of clients. Funding decisions are streamlined and normally confirmed within 5 working days.
- Alternatively, organisations can self-fund the cost of the workshop, which is **£2,000**, with a maximum restriction of 8 delegates per workshop to ensure appropriate levels of interaction.

Please note: All workshops are delivered via Microsoft Teams during the current pandemic. Additional delegate numbers can be considered however this would require additional QUANTIQ Consultants, therefore an additional cost, in workshop delivery to ensure all delegates receive the required assistance and support.
