

App in a week

Unlock the potential of PowerApps in five days.

Apps can make an organization a lot **more efficient and mobile**. Unfortunately, due to the required investment to develop native apps, it's reserved for the truly business critical processes. Less crucial tasks such as filling in incident reports or having a checklist for maintenance checks are often overlooked. During our 'App in a week' challenge, we pick one of these less critical processes and create a **minimum viable product** through Microsoft Power Apps, helping you be more efficient.

SMALL APPS, BIG IMPACT

Microsoft Power Apps is a *low code/no code platform* that lets you build small applications almost as easy and quickly as creating a PowerPoint. Even employees without much IT knowledge can design apps to work more efficiently in a matter of only a few mouse clicks. For instance, they may not need full details of a Dynamics CRM entry, so they create their own Power App showing only a small subset such as email and phone number at a fraction of the cost and time of a native app. With *over 300 connectors*, it's easy to integrate multiple software packages into your app, bringing about a big impact on your efficiency by smoothly solving small challenges. Moreover, since *Power Apps run on the Microsoft Cloud*, security and governance of your app and connected software are guaranteed at an enterprise level. Power Apps can also help digitize paperwork. Warehouse supply orders, for example, can easily be replaced by creating a Power App that allows users to fill in order details on a phone or tablet and feed it directly into Dynamics 365 or other back-end systems.

A MINIMAL VIABLE PRODUCT IN FIVE DAY

In our 'App in a week' challenge, we build a *power App that solves one of the issues your business is faced with in just five days*. At the end of the road, we'll deliver a minimum viable product that can be used within your organization.

QUBIX'S SECRET SAUCE

The *backbone* of Power Apps is *Microsoft's Dataverse and Power Automate*, that respectively taps into Dynamics 365 and Office 365. Qubix takes a unique position within the market. Not only are we a *Microsoft Gold Partner* with extensive knowledge of Office 365, we also master Dynamics 365 in order to cover both sides of the Power App equation (canvas app and model-drive app). Our expertise in these software platforms together with the Power Platform enables us to spot quick wins that will improve efficiency and digitization of your business.

Price fixed at €3,950

Leverage the Power Platform to turn your use case into a working app within five days.
