

# Copilot Agent Quick Start

Accelerate your first Copilot agent and build a scalable foundation for future automation

Organizations want to rapidly adopt Copilot Studio but often lack clarity on where to start, how to build responsibly, and how to scale sustainably. Quisitive's **Copilot Agent Quick Start** gives your team hands-on experience, delivers your first working agent, and equips you with the roadmap, governance, and skills to confidently expand your agent portfolio.

## How It Works

- 1 Design Lab: Explore, Prioritize, Align**  
 Our experts facilitate targeted workshops to identify high-value agent opportunities, evaluate feasibility, and select the ideal MVP use case. This includes problem inventory, customer journeys, data-fit review, and prioritization of top contenders.
- 2 Copilot Studio Deep-Dive and Demo**  
 Your team receives a guided tour of Copilot Studio: topics, prompts, grounding, connectors, plugins, packaging, security fundamentals, and the "Art of the Possible."
- 3 Responsible AI & Governance Framework**  
 We establish the principles, controls, and safety features that will guide your ongoing Copilot agent development—covering privacy, DLP, exception paths, escalation, and governance guardrails.
- 4 Live Prototyping & Build-Along Sessions**  
 Quisitive works with your data and documentation to design, prototype, and build your first Copilot agent. Activities include:
  - > Designing conversation flows (up to 6 intents/topics)
  - > Configuring fallback & human handoff
  - > Connecting up to 2 knowledge sources
  - > Implementing up to 2 system integrations
  - > Developing prompts, grounding, and telemetry
- 5 Roadmap, Review & Enablement**  
 We conclude with a full project summary, agent demonstration, success metrics, and a prioritized roadmap for future agents.

### Ideal for:

**Business decision makers, CIO, CTO, IT leadership, and innovation teams** seeking rapid Copilot adoption with strong governance, practical training, and measurable value from their first agent.

### Deliverables

- > Fully functional MVP Copilot agent
- > Project summary & roadmap with recommended next steps
- > Governance guidance for secure scaling
- > Hands-on enablement for future agent development

### Timeline & Investment

**Length:** 4–6 weeks

**Cost:** \$45,000

(eligible for Microsoft funding)
