Velocity for Data

Accelerating the Speed of Data-Driven Initiatives

Velocity for Data helps companies gather valuable insights from data to drive actionable decisions based on identifiable trends, needs and targeted services. This ultimately transforms the experience of your customers, your employees and your workplace.

VELOCITY

Despite the exponential growth of data, it is becoming more difficult to meet the needs of customers, provide insight to employees, and make data-driven improvements to operations. Data is often spread across multiple locations or departments with limited or no access. The traditional approach to data analytics and reporting can take years to plan, requires costly investment in software and hardware, and demands a breadth and depth of hard-to-find expertise.
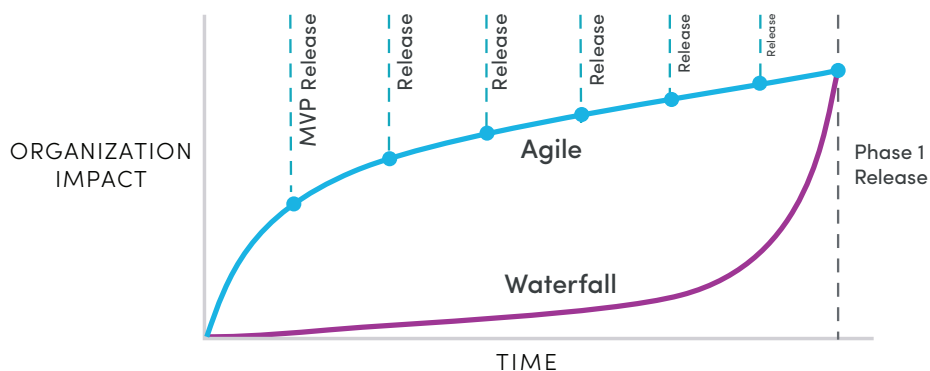

Quisitive's Approach

Traditionally, once requirements are defined, you must invest in expensive software and hardware before you can move toward your ultimate goal. Unfortunately, needs often change along the way, altering the entire scope of your project. Quisitive takes a different approach that accelerates results while reducing cost. We provide insights every few weeks to help you get the most out of your data. By leveraging the cloud, you only pay for capacity you use, when you use it. Digging deeper into your data, we can help you empower a more productive workplace.
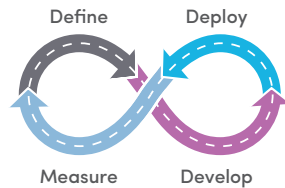

How it Works

We begin with collaborative sessions to define your vision and goals, prioritizing near and long-term objectives, and pinpoint both internal and external available data sets. We identify potential insights in your data, provide feedback, and utilize analysis and visualization tools for collaboration and easy-to-consume analytics. If your goals change, we quickly course-correct to ensure you receive insights you can actually use. Additionally, by leveraging the Microsoft Cloud, Quisitive provides you with world-class security to protect your data.
