Managed Extended Detection & Response (XDR) Service

Quorum Cyber

Cyber-attacks continue to increase in frequency and sophistication, causing greater risk, uncertainty and harm to organisations in every industry around the world. Businesses are operating larger and ever-more complex IT environments that require a broader set of skills, deeper knowledge and yet more funding to defend themselves than ever before. At the same time, cyber skills remain in short supply worldwide, making the competition for talent fiercer than ever.

Quorum Cyber's new flagship Managed XDR service provides comprehensive security across your whole IT estate, freeing your teams to concentrate on your core business. Our solution focuses on business results and outcomes while reducing the total cost of ownership (TCO) to give you a clear return on investment (ROI) – regardless of the size, complexity and geographical footprint of your business.

XDR Is Greater Than The Sum Of Its Parts

Our Managed XDR (Extended Detection & Response) combines the strengths of Microsoft's two families of Defenders into one single service:

Managed XDR =

Microsoft 365 Defender and Microsoft Defender for Cloud

+ Microsoft Sentinel

Today, 785,000 organisations in 120 countries use Microsoft Security products, benefitting from the more than $1 billion that the company invests in security every year. With our Managed XDR service, which is entirely run on Microsoft technology, customers entrust us to take full responsibility for cyber security across their whole organisation, allowing them to achieve more with less.

Employing the all-seeing Microsoft Sentinel in our XDR service, we monitor absolutely everything, from any vendor, in your IT ecosystem, be it on-premises or in the cloud, in Operational Technology (OT) or the Internet of Things (IoT). We scan laptops, smartphones and other devices through to email, networks, identities, virtual machines, databases and firewalls, and any type of operating system and any cloud environment, including from Amazon Web Services (AWS), the Google Cloud Platform (GCP) and Microsoft Azure.

Our premium service includes our Microsoft Sentinel Managed Detection & Response (MDR) as standard to give you complete peace of mind every day of the year.

Learn more about MDR on our dedicated page.

Superior Features Of Managed XDR

The 'Managed' component of our Managed XDR service means that our experienced threat hunters will proactively monitor your environment on a daily, weekly and monthly basis, ensuring you have the best security protection possible as Microsoft continues to update features and products. Our threat experts will investigate any suspicious activity that's flagged by our automated threat monitoring technology.

This approach makes the most of human intelligence and creativity combined with time-saving software. We'll help you streamline your portfolio of products and licences to ultimately adopt a single security ecosystem to take full advantage of Microsoft's $1 billion per year investment in cyber security.

Greater optimisation brings greater efficiency and productivity, saving time, energy and resources so that your team can focus on your main business goals rather than be distracted with cyber security issues that are our team's bread and butter. Our management of the XDR service also guarantees that you'll always have the most up-to-date software to protect you from whatever threats emerge.

With permission, XDR analyses every nook and cranny of your organisation's IT landscape, from a temperature sensor to a robot on the factory floor, to detect unusual activity anywhere and prompt our analysts to investigate. No stone is left unturned in our proactive hunt for potential threats. In addition, our engineers execute 'safe attacks' in a monthly MOT and talk you through any vulnerabilities to continually improve your security posture in light of the latest cyber incidents around the world.

Key Customer Benefits

Managed XDR is flexible and scalable to suit any organisation of any size, and promises an impressive set of outcomes:

- Gain the peace of mind of having comprehensive cyber security across your entire IT environment
- Significantly reduce the chances of a successful cyber-attack
- Rapidly contain suspicious incidents
- Shorten the dwell time of a cybercriminal
- Minimise damage of any breaches that do occur
- Shrink TCO by consolidating to a single vendor security ecosystem
- Save the expense of building and running an in-house cyber security team
- Maximise use of existing technologies and licences to realise value for money
- Understand your risk profile and improve your security posture against the latest threats
- Run a monthly cyber-attack simulator and security MOT check to assess any vulnerabilities and strengthen defences
- Increase your team's productivity by freeing their time and energy
- See any cyber incidents and how they're being managed in real time via our customer portal, Clarity.
