

ENTRA GLOBAL SECURE ACCESS

FUTURE-PROOF YOUR NETWORK: DIVE INTO MICROSOFT SECURITY SERVICE EDGE

COMPREHENSIVE CLOUD PROTECTION: EXPLORING MICROSOFT SECURITY SERVICE EDGE

Microsoft Global Secure Access is an identity-centric solution that converges network, identity, and endpoint access controls. This allows secure access to any application or resource from any location, device, or identity. Perfect for today's hybrid and modern workforce, it helps overcome traditional security challenges such as inconsistent controls, security gaps, high operational costs, and complex legacy systems. Ongoing Monitoring and Adjustment: MSSE allows for real-time adjustments in user access based on permissions or risk level changes. Boost Employee Productivity: Minimise latency and maximise performance with Microsoft's vast global network ensuring fast access to apps and resources.

We recommend Global Secure Access for its ability to transform your organisations approach to cybersecurity:

- **Enhanced Security:** Integrates seamlessly with tools like Microsoft Defender for Endpoint and Sentinel to provide a unified response to threats.
- **Reduced Complexity:** Simplifies security management by centralising multiple functions into a single cloud service, easily managed through a comprehensive dashboard.
- **Improved Network Performance:** Optimises traffic routing via the nearest Microsoft edge point of presence to reduce latency and bandwidth use, while securing access to cloud services.

We will conduct a Entra Global Secure Access workshop and assessment with you to determine what existing or new user Security Service Edge capabilities can be moved to Entra Global Secure Access.

Entra Internet
