

Office 365 Tenant to Tenant Migration

Engage a Quorum expert to assess your existing Microsoft 365 Tenant to help migration to a new Microsoft 365 Tenant.

We will conduct a Microsoft 365 Tenant to Tenant Migration Workshop and Assessment with the customer to identify workloads, migration requirements and approaches to move organisations data between Microsoft 365 Tenants.

Quorum has worked across mergers, acquisitions and divestitures to navigate tenant-to-tenant migrations, delivering seamless and intuitive migration solutions. With the development of our own internal IP and processes, we've tackled major migrations with some of Australia's largest brands. As no tenant-to-tenant migration is the same, we utilise a tried and tested approach to tackle challenges of any scale.

We navigate the practical and regulatory requirements of major tenant-to-tenant migrations, whether one tenancy is moved into another or both organisations are migrated into a new target tenant.

With each tenant-to-tenant migration presenting unique challenges and considerations, Quorum's approach is a sophisticated combination of application-specific products and expertise gained from years of first-hand experience. We navigate potential issues such as downtime during migrations, the re-profiling of applications, objects or containers existing across multiple sources, tenant switching, workloads without migration paths and more.

Through careful planning, robust communication, thorough tooling and strategic execution, we deliver successful tenant-to-tenant migrations that ensure business continuity and security.

By Conducting the Microsoft 365 Tenant to Tenant Migration Assessment the customer will capture the following key outcomes helping to migrate workloads between Microsoft 365 Tenants

- Customer stakeholder workshops to discuss current and future states.
- Understanding of current Microsoft 365 Tenant Usage
- Overview of existing service usage, integration, and migration approach:
 - Identity and Access Management
 - Exchange Online
 - OneDrive for Business
 - Teams
 - SharePoint
 - PowerBI
 - End User Compute
 - Mobile Device Management
 - Azure AD Applications
- Migration Tool requirements
