

Windows 365

We will conduct a Windows 365 Workshop and Assessment with the customer to identify user persona's, remediation activities and migration options to move from legacy VDI platforms to Windows 365.

As organisations embrace cloud technologies and hybrid working, they're also looking to replace legacy on-premises VDI platforms with Modern ones that are easier to manage. With Windows 365 you can adopt this approach to simplify management, improve security and accelerate deployment.

The Windows 365 workshop and assessment provides the following:

- An experienced Quorum Consultant and Project Manager for 12 days to drive the engagement.
- A High level design document that will contain information on current state, future state, remediation requirements and strategies for adoption.

By conducting our assessment we will provide the design blueprint for Windows 365. The assessment delivers the following outcomes:

- Customer stakeholder workshops to discuss current and future states.
- Understanding of current VDI landscape
- High Level Solution Overview
- Best Practice and guidance recommendations for:
 - Identity Requirements
 - Connectivity Requirements
 - User Persona's
 - Security and Compliance Requirements
 - Monitoring Requirements
 - Management and Maintenance
 - Backup & Disaster Recovery
- Remediation Items
- Risk Matrix
