

## AZURE ASSESSMENT

+++++

The Microsoft Azure platform is an expansive and potent system. However, as the Microsoft stack continues to expand and your internal development evolves, costs can gradually increase, configurations may become neglected, and new features and enhancements may go unnoticed. Consequently, organisations may end up overspending or failing to take full advantage of the platform's paid offerings.

### WHAT WE REVIEW

#### Environment

Our team will perform a thorough evaluation of your existing Azure environment. If we determine that there are opportunities to enhance performance and optimise costs in a way that benefits your business, we will provide you with clear guidance on how to implement these improvements.

- ★ Compute service and scaling
- ★ Storage service/retention
- ★ Network connectivity and resource spread
- ★ Database usage, storage medium, service type & licensing
- ★ Resource Access and consumption methods

#### Cost Assessment

We will conduct a cost evaluation of your environment, analysing areas where Reserved Instances could be leveraged and reviewing the resource specifications (SKU) to ensure optimal performance and value are being achieved without compromising workloads.

#### Governance

Our team will thoroughly evaluate your current Azure governance and policy setup to ensure that you are effectively controlling and safeguarding your environment, as well as meeting and exceeding the industry best practice standards set by Microsoft.

- ★ Cost Management
- ★ Security Baseline
- ★ Resource Consistency
- ★ Identity Baseline

### WHAT YOU GET

#### Report

Our team will present you with a clear and practical report that is tailored to your specific environment, devoid of confusing technical terminology and full of actionable insights to help guide your next steps.

#### The report includes the following:

- ★ A detailed breakdown of potential cost savings
- ★ Recommendations for infrastructure changes that can enhance the value of your Azure setup
- ★ Governance recommendations to improve the security and standardisation of your environment, aligned with industry best practices.

This assessment is highly recommended for businesses that are uncertain about whether their Azure environment is being fully utilised according to current best practices and standards.

Our evaluation will identify any vulnerabilities or areas for improvement that can enhance the security and stability of your Azure infrastructure, providing you with greater confidence in your system.
