

AZURE VIRTUAL DESKTOP 4-WEEK POC

+++++

With Azure VDI services, you can access your Windows 10 and 11 desktop and applications from virtually anywhere. QuoStar can help deliver a secure and scalable user environment that can be accessed on any device with an internet connection using the Azure Virtual Desktop client.

WHAT WE WILL DO

QuoStar will build a proof of concept Azure virtual desktop environment for you to trial. Your team will be able to access this environment for 30 days to test its capabilities.

With this POC environment, you can experience the benefits of a virtual desktop infrastructure and assess how it can improve your business operations.

- ★ **Qualifications of business applications** and the compatibility within an Azure desktop, and how best to optimise them. Testing of key applications where feasible as part of the POC.
- ★ **A secure Azure Virtual Desktop environment**, which includes a 'gold' image template for up to three different use cases. This will include Microsoft 365 applications.
- ★ **Review and feedback** on your current infrastructure to ensure that the Azure Virtual Desktop environment is fully integrated and optimised for your business requirements.

Let QuoStar help you set up a seamless and reliable virtual desktop infrastructure that meets your business needs.

Please note that this environment is designed for testing purposes only and will contain limited customer data.

WHAT VDI DELIVERS

A Simplified Environment

The Azure Virtual Desktop environment reduces complexity, making it easier for you to manage and maintain your infrastructure.

Rapid Onboarding

The Azure Virtual Desktop environment allows for the rapid deployment of new users and enables easy access from any location, improving workforce productivity and collaboration.

Optimised Infrastructure

With the Azure Virtual Desktop environment, you can optimise your infrastructure costs by reducing hardware and maintenance expenses, while also taking advantage of cloud scalability and performance.

Enhanced Security & Risk Management

Azure Virtual Desktop environment provides a secure infrastructure to minimise the risk of cyber threats and data breaches, while also offering advanced security features such as multi-factor authentication and conditional access.
