

Microsoft Azure Well Architected Review: Two-Day Workshop

Gain insight into existing Azure environments and workloads and get on the path to a well architected cloud environment.

Today, many organizations don't have in-house access to deep cloud expertise when constructing their cloud platform. If the platform and portfolio aren't well architected, chances are that customers will face numerous challenges, including cost overruns, configuration issues, performance loss and security risks.

The Rackspace Well Architected Review is derived from Microsoft's Well Architected Framework. It's used to assess Microsoft® Azure® environments and workloads, and determine how they stack up against the five pillars of architectural excellence: cost optimization, operational excellence, performance efficiency, reliability and security.

Your Well Architected Review will document current deficiencies and establish priority issues. This assessment enables your organization to confidently build workloads aligned with best practices, gain actionable intelligence on potential issues, and create a deeper understanding of where to focus your workload optimization efforts.

Workshop overview

The Well Architected Review workshop will provide foundational knowledge to help you gain a deeper understanding of your current Azure environment and workloads.

Key benefits and activities

- An end-to-end review of existing application and architectural design to identify critical optimizations
- The identification of critical risks to the design and implementation of an application
- Delivery of prioritized and actionable recommendations to address all areas of concern and for cost optimization

Workshop timeline

Day one	Day two
<ul style="list-style-type: none">• Define business requirements• Define technical requirements• Identify necessary tooling	<ul style="list-style-type: none">• Review existing Azure deployments and perform assessment• Evaluate existing environment against Microsoft five pillars of architectural excellence• Provide guidance on improvements• Review priority issues and build mitigation plan for next steps

Deliverables

- ✓ Well Architected Review assessment and workshop
- ✓ Executive summary with prioritized recommendations
- ✓ Red/Amber/Green review of your environment with prioritized recommendations
