# Microsoft 365 Secure Remote Work Workshop

Rackspace Application Services will lead a Microsoft 365 Secure Remote Work Workshop with the objective to uncover the best suited remote work scenario and empowering employees to stay connected whilst maintaining security & control.

We will identify potential blockers, risks and challenges and provide a mitigation and remediation proposal. We will review the Security and Compliance posture across the collaboration platform and advise on the suitable protection measures to meet business objectives and requirements.

Our methodology:

- Understand customer's concerns and the current implementation of remote working
- Deep Dive into the Security concerns of remote working
- Explain and compare Microsoft 365 services with existing remote working tools, with a view to examine how Microsoft 365 services can help overcome remote working concerns and challenges
- Agree suitable M365 applications and features for Secure Remote Work implementation
- Initiate training for the IT operations teams by conducting IT admin trainings and provide guidance on how to support Remote Work scenarios
- Adoption Roadmap creation

Your journey with us:

- Discover and analyse your current environment and workload, including an assessment of your security posture with regards to remote working.
  - Discovery questionnaire to capture environment data
  - Conduct M365 Secure Score Analysis to assess the current security posture
  - Utilise reports and analysis tools within the M365 suite to capture key information for productivity analysis
- Identify the functional features and security controls that are applicable to your environment
- Provide security best practices on Guest Access and External Sharing
- Reimagine the way of collaboration, understand how to make use of the collaboration features within M365 towards your productivity objectives
- Review relevant industry or business operation specific ideas from the Microsoft Productivity Library
