

RapidFort Quick Facts

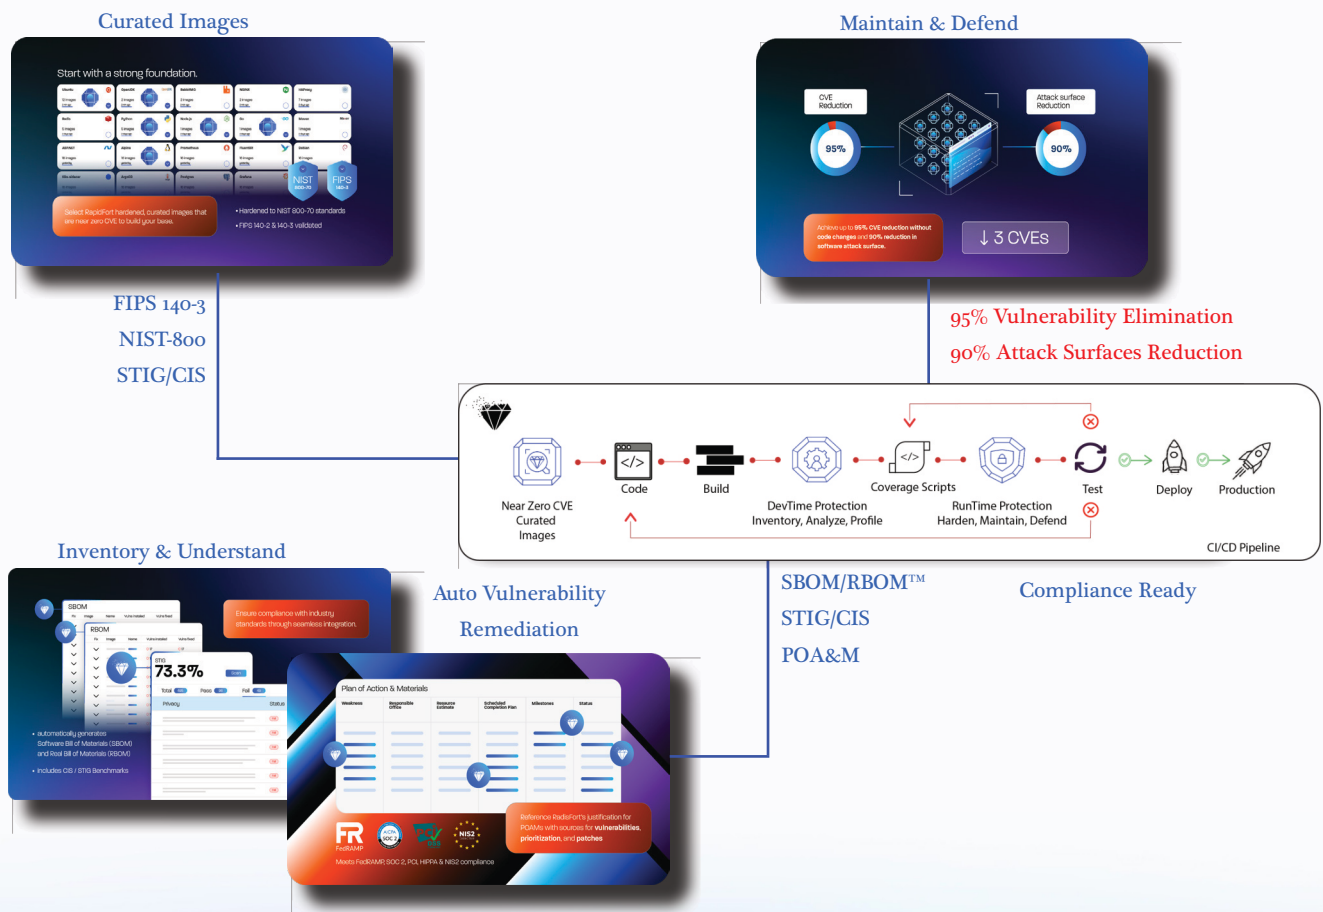

Near-Zero CVE Images, Hardened to NIST 800 - 70 Guidelines
FIPS 140-3 Validated, STIG/CIS Benchmarked

As organizations increasingly adopt containerized environments, security, compliance, and software supply chain security have become critical priorities. Choosing the right security-focused container solution is essential for mitigating risks, maintaining regulatory compliance, and ensuring software integrity.

RapidFort is a trusted security provider that delivers a comprehensive container hardening and CVE remediation solution. With 95% CVE remediation, RapidFort enhances security across the container build process and production by leveraging:

- Inventory & Understand : DevTime Protection Tools
- Remediate & Automate - Curated Near Zero CVE Images
- Maintain & Defend - RunTime Protection Tools

RapidFort supports Long-Term Support (LTS) Linux distributions, ensuring stability and broad compatibility for enterprises and government agencies.

Reduce Development & Infrastructure Costs

Speed up Software Releases

Fast-Track Compliance

Security and Compliance

- Built on widely trusted LTS distributions, including:
 - Ubuntu, Red Hat, Debian, Alpine
- Ensures long-term stability and compatibility
- Patches only upstream CVEs

Government and Enterprise Compliance

- DISA STIG Benchmarking
- FIPS 140-2 and FIPS 140-3 validated
- Preferred DoD Vendor - IronBank

Vulnerability Management and Attack Surface Reduction

- Daily image builds with continuous patching
- Software Attack Surface Management (SASM)
- Patches & eliminate vulnerabilities at build time.

Transparency and Operational Reliability

- Full visibility into image builds, updates, and security patches.
- Ensures enterprises can track, validate, and audit security measures.
