# LogMill

Handle errors and monitor your app's health with ease

Going live? You should be prepared for everything.
Fix errors and monitor the health of your app with Logmill.
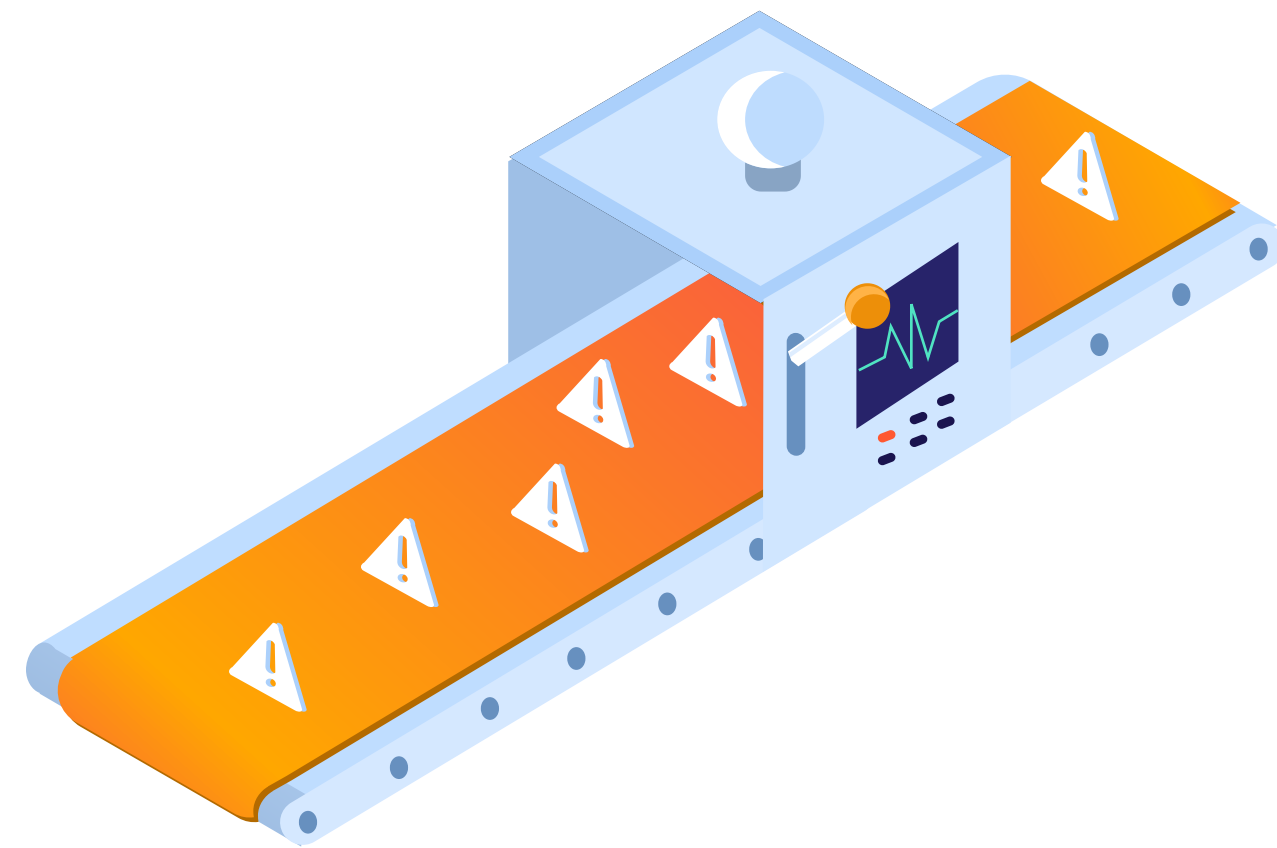

**Full control
of your apps**

**Error
logging**

**Smart
sensors**

Error logging

If you are a developer, tester or member of a customer support team, Logmill.io will be your new best friend. Fast, precise and easy to use. This tool will provide you with every piece of information needed to.

Work effectively in teams

Teamwork is always more effective. Use Logmill.io with your teammates or even clients. You can assign user to different teams, with different roles, based on their projects and environments. Restrict access to sensitive information.

Monitor your app's health

? Project 1	○ Live
UP 1d 22h 15m	UP TIME **85%**

? Project 2	○ Live
INVESTIGATING 1d 22h 15m	UP TIME **85%**

? Project 3	○ Live
DOWN 1d 22h 15m	UP TIME **85%**

? Project 3	○ Live
MAINTENANCE 1d 22h 15m	UP TIME **85%**

Smart sensors are the power behind LogMill's health monitoring. They will scan if your app's processes don't work as they should so you can fix errors fast. In short: Logmill will work for you.

Count on detailed insights

Detailed data can be seen on messages, sensors and email screens. Logs are grouped for a better overview.

Sensor	Live	Staging	QA	Development	Size	Action
● Application Status `every 30 mins`	●	●	●	●	◔	?
● ERP Windows Service - ERP Connection `every 60 mins`	–	●	●	●	◑	?
● ERPWindows Services - ProcessSapQueue `every 2 hours`	–	●	●	●	◕	?
● ERPWindows Services - ProcessSapToERPFiles `once a day`	●	●	●	●	○	?
● ERPWindows Services - Sap Update NetPr `every 60 mins`	●	●	–	●	◔	?
● ERP Windows Service - ERP Connection `once a week`	●	●	●	●	○	?
