

[DATA LOSS PREVENTION]

Prevent the unauthorized sharing, transfer, or use of sensitive data

Data loss prevention (DLP) is a vital security solution that detects and prevents the unauthorized sharing, transfer, or misuse of your organization's sensitive data and ensures compliance with regulations like HIPAA and GDPR.

[CHALLENGES WE RESOLVE]

Our experts safeguard your sensitive information across various platforms including on-premises systems, cloud environments, and endpoint devices, helping you protect the integrity, confidentiality, and availability of your organization's data. The main challenges we help our clients resolve include:

Classifying and monitoring sensitive data

Applying rules for identifying sensitive information and maintaining a compliant data security strategy.

Detecting and blocking suspicious activity

Preventing sensitive data from leaving your network, whether through email, being copied to USB drives, or by other means.

Automating data classification

Tracking data creation, storage, and sharing to improve classification quality and enforce policies to keep sensitive data from unauthorized sharing.

Maintaining regulatory compliance

Providing reports for compliance audits and ensuring adherence to standards like HIPAA and SOX; also helping with data retention planning and staff training.

Monitoring data access and usage

Tracking who accesses data and their actions to prevent insider threats. Managing digital identities and controlling access based on roles.

Improving visibility and control

Offering insights into sensitive data, potential risks, and providing suggested paths forward.

[PROCESS]

With our team's expert insights, we help you:

1. Understand your data

Locate all the places your sensitive data is stored.

2. Protect your data

Determine data's sensitivity and business impact so you can knowledgeably assess the risks.

3. Prevent data loss

Enforce controls to prevent data loss (e.g., rights management, encryption at rest and in transit)

4. Govern your data

Ensuring data is continuously discoverable by the right people, trusted, and can be protected.

"Ravenswood has supported us from several angles, from designing and implementing identity management solutions to running in-depth workshops and pilots to plan and test a robust data loss prevention program. These efforts are making a measurable impact on the strength of our data security"
