

# Meet the company that will transform your business

Our consultants are at your service to answer any questions, show more details about our consultancy, and discuss solutions to your business challenges.

## Services

**DevOps Consulting**

**Cloud Consulting**

**Professional Outsourcing**

**Managed Squads**

**Software Projects**

## The largest companies in Brazil trust our solutions

**10 year**  
history

**+100**  
clients

**+500k**  
consulting hours

**+500**  
allocated professionals

## Who we are

### Very different from the others

We are not like the big consulting companies that are more concerned with putting their plan into action at all costs and treat your company as one more client in their portfolio. We want to add to what is essential, respecting your culture, structure, and governance.

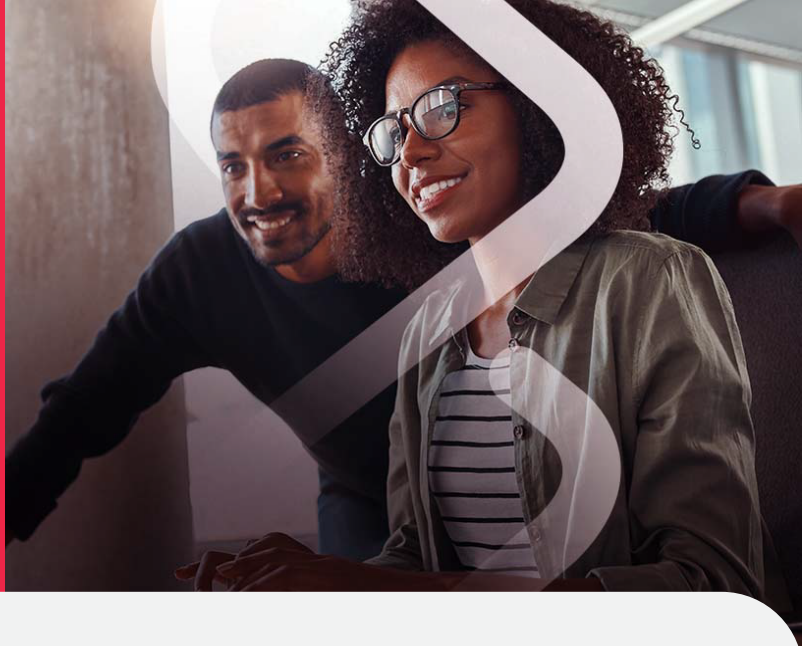

### Far beyond a Bodyshop

Here, we go the extra mile. We don't just serve as a recruitment and selection company. We help you build adjusted and resilient squads and follow up with all the allocated professionals closely.

## Our Motto: Technology is not enough

In a market of constant chaos, we believe the only possible way to build an IT area with high performance is when we look beyond technology.

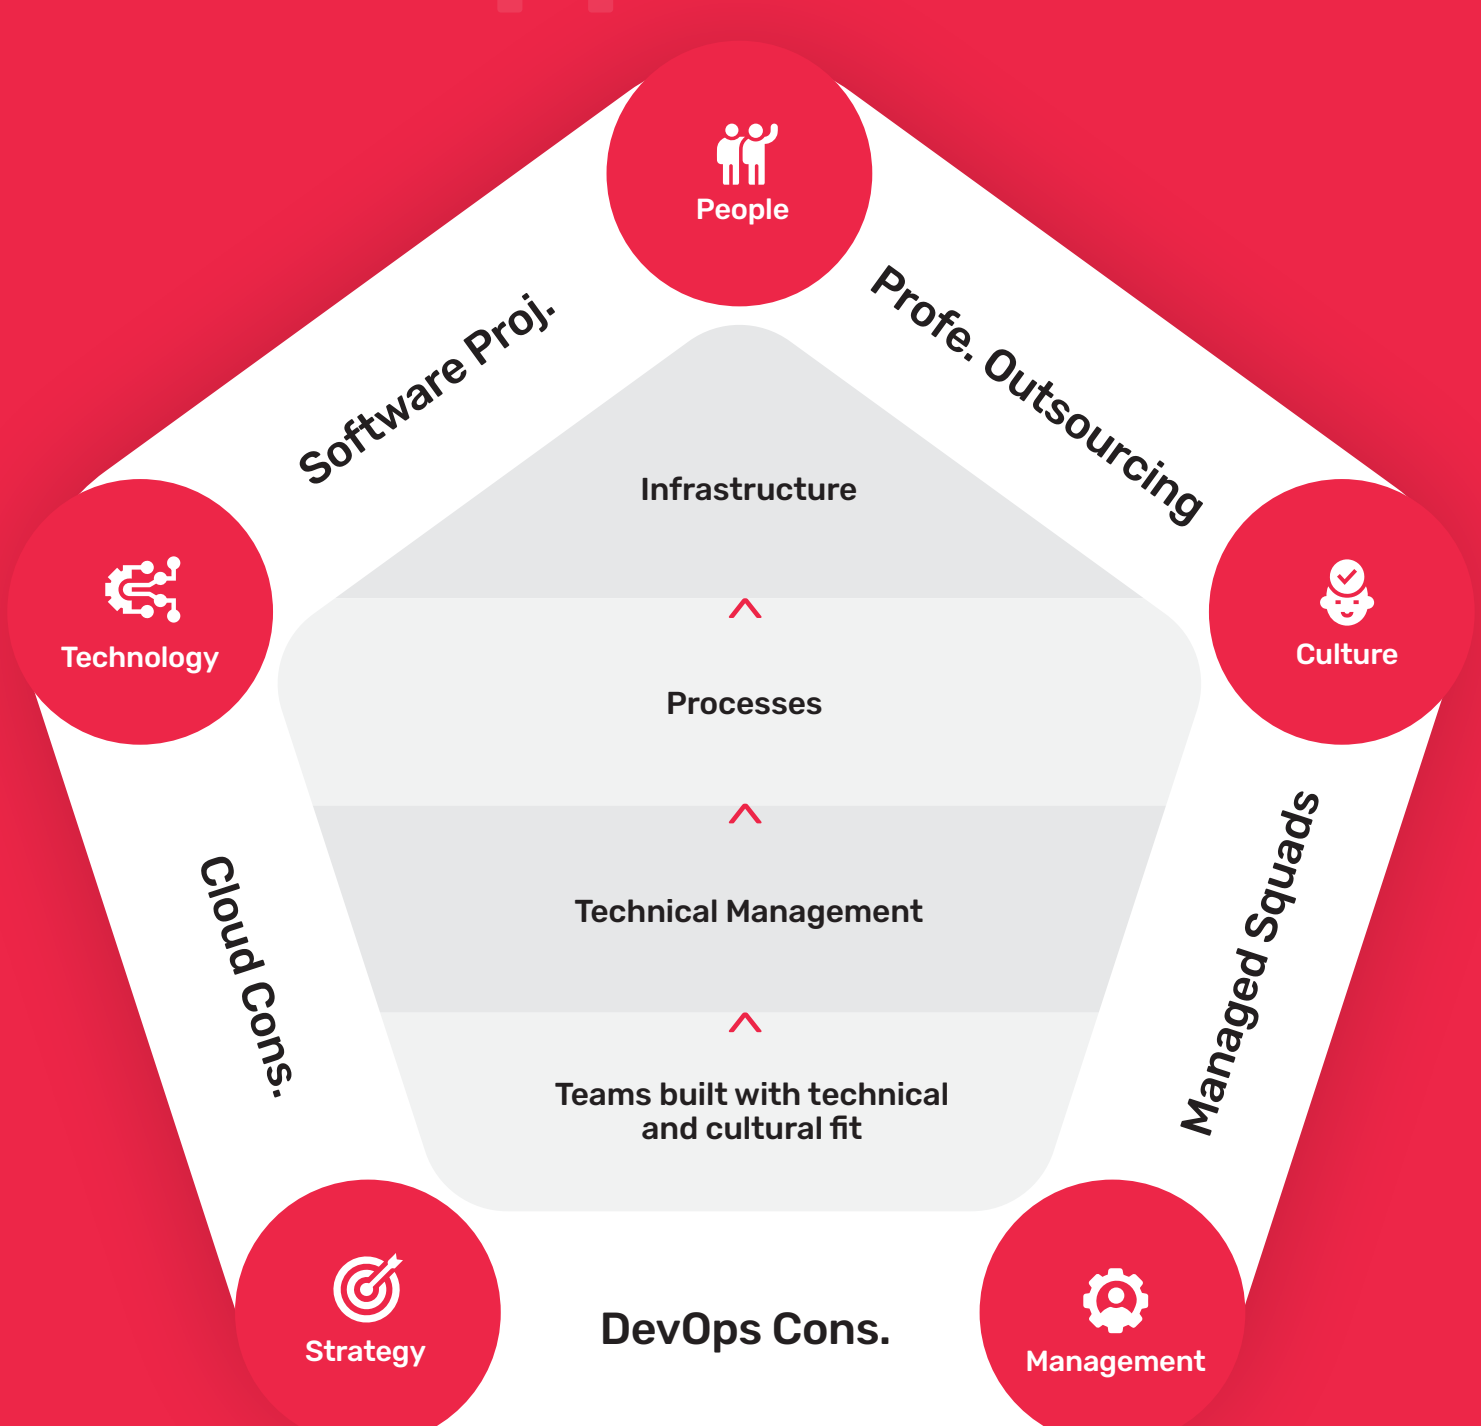

## How do we operate?

We act as an extension of your technology team and serve as the right hand of Managers so that they can be less reactive to workloads and manage the 5 fundamental pillars of high-performance IT.

## Our Approach

## Some of our most successful cases

### TOTVS

We built the largest installation of the Microsoft Azure DevOps platform (TFS at the time) outside of the United States and facilitated the transition for over 3,000 developers.

### HDI Seguros

With DevOps we migrated all the company's environments to the Google Cloud Platform

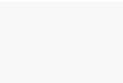

### Veloe

We built and are maintaining the entire CI/CD treadmill of the company, with pipelines for Microservices architectures and the consolidation of their repositories in the AWS Cloud.

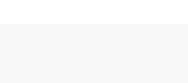

### MAG Seguros

We migrated a legacy database that is over 100 years old, as well as maintaining a full DevOps program.

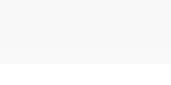

### LINX Pagamentos

We migrated a legacy database that is over 100 years old, as well as maintaining a full DevOps program.

### Rede Globo

We built a resilient technology team, with more than 50 professionals, for a program of total migration of the media collection of the largest communication group in Brazil and one of the largest in the world.

### Localiza

Catalizamos, com DevOps, o programa de migração de todos os

Services Portfolio

We optimize your company's technological development cycle, making your projects faster and simpler.

We promote closer collaboration between business, development, and IT operations teams.

By doing so, we increase your organization's ability to respond to market needs faster through more frequent, high-quality deliveries.

✓ We are a world reference in DevOps methodology and the best you could have to assist in your activation.

✓ We were elected by Microsoft as the best partners in the world in DevOps competency (2012)

## Pillars of our DevOps Consulting

### Tactics

We build more efficient and collaborative interactions between people, processes, and technologies, coordinating teams to deliver faster, more reliable, and better products.

### Automation

We increase productivity by eliminating repetitive tasks and human dependency on workflows, automating several steps in the test loop, integration, and continuous technology deployment (CI/CD).

### Governance

We incorporate strict version control and code quality processes during the development, approval, and production stages, increasing team efficiency and reducing the incidence of errors.

### Culture

We gradually improve the integration, communication, and collaboration between technology teams, breaking all existing silos, and building continuous cycles of learning and improvement, in addition to ensuring the adherence and perpetuity of the agile culture in your organization.

## What we do differently

### Experience and own framework

We have some of the biggest success stories of activating the DevOps culture in Brazil. We apply our work methodology that serves as a reference for other companies that want to optimize their development cycles.

### Integrated Security (DevSecOps)

We automatically build security into our framework, enabling secure software development from the start of the project and reducing security risks without disrupting development schedules.

### Data-Driven DevOps (DataOps)

We have incorporated performance reports on all project operations and repositories, which are updated in real-time and provide a much more efficient way to manage the development cycle and ensure project governance.

With DevOps we transform the **status quo** of technology teams, collaborating so that Managers and CTOs can achieve various business goals, such as:

	Accelerate the development cycle of a solution (Time to market)		Respond quickly to market demands, customer requirements, and competitor movements (Lead Time)
	Develop better, more reliable, and innovative products than your competitor		Increase productivity, reduce failures, and build higher-quality software (which increases customer satisfaction)
	Reduce the time to fix failures, as well as the impact of new updates in production		Breaking down silos that affect communication, learning, and project development
	Increase Market Share and Revenue		Develop more stable and reliable systems

### Performance Models

## Essential DevOps

In this operating model, we are pragmatic and focus on an essentialist diagnosis. With fast and affordable solutions we solve the most critical problems that prevent your business from progressing.

## Fast Value Delivery

## Master DevOps

Subsequently, if the need arises, we build a roadmap focused on activating up to 30 DevOps capabilities in the development cycle. This will require more time, but it can significantly raise the maturity level of your culture and development team.

## DevOps Capabilities

Feature Flag	Trunk-based Development	Immutable Infra	Horizontally Scalable Application	Business Monitoring	Loosely Coupled Architec
Environment provisioning	Resilient Software Architecture	Paired Dev/Prod Environments	Integrated Security	Continuous security testing	Application Monitoring
Cloud Cost Management	High Availability	Test Driven Development	Automated functional testing	Code Quality	Infra as Code
Test data management	Monitoring the Development Process	Continuous Integration	Database versioning	Logging	Disaster Recovery
On-premises Dev environment	Package Management	Build Automation	Release Automation/Pipeline	Font Management	Application Monitoring

Solve all the problems that prevent your company from developing technology with agility, quality, and security
