### Essential DevOps

Recovery of custody of sources

Delivery automation

Application monitoring

### Application Monitoring

Choose the indicators relevant to your business and its developments in technology solutions and capture both events and technical metrics, as well as availability of vital components for operations.

### Recovery of custody of sources

Gain control over source codes held by third-party providers by gradually restricting the entry of production versions that are not in the source repository.

### Delivery automation

Automate the activities that make up the solution delivery phase, from the assembly of software packages, to their installation in the test, approval and production environments, in parallel with the execution of the tests required at each stage.

### Outcome

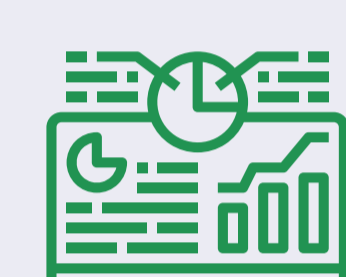

#### Real-time control

Better visibility on the demands of customers and users, organizing the team's work and increasing the effectiveness of the results.

#### Eliminate repeated tasks

Features such as build and release pipelines, eliminate manual and repetitive tasks that consume your team's time and still generate frequent delivery errors.

#### Protect your business

Implement quality techniques and processes in test automation and avoid harmful impacts that can cause risks to the business.

## Why choose ESX

### Experience speaks louder

We have as a legacy the recognition of the best ALM partner company in the world by Microsoft, with experience and experience in several complex scenarios and organizations from different sectors.

### Advisory Approach

Our consultants evaluate the business aspects to understand objectives, priorities and risks, which allows them to direct solutions and approaches with more assertiveness and aligned with top management.

### Future roadmap

At the end of the work, if you want to follow another level of maturity in the DevOps processes and practices, we generate the Master DevOps program roadmap, with its priorities, objectives, investment estimates, benefits and return.

### Master DevOps

Design Thinking with agility and Devops

Formation of multidisciplinary teams

Elimination of deployment windows

### Elimination of deployment windows

Completely remove the update windows of the applications and increase the maturity of the approval processes by applying tests with users (UAT), going through the complete automation of pipelines, the use of feature flags and sophisticated deployment and release strategies.

### Design Thinking with agility and DevOps

We use the Design Thinking methodology to address critical points throughout the development cycle and promote innovations, supporting the management of backlogs with agile testing methods, hypothesis validations and deployments.

### Formation of multidisciplinary teams

We have gathered all the skills necessary to build and evolve products and services with agility and transparency, breaking through silos and facilitating the sharing of learning with a history of deliveries, traceability and performance metrics.

### Outcome

#### More in tune between the technology and business teams.

By promoting transparent interactions between teams, deliveries become more effective and aligned with the final objectives.

#### Less time to market

The efficiency obtained with the optimization of processes and automation of activities allows to significantly reduce the time to launch and improve services and products.

#### Increased security level

Without losing agility, ensure the intrinsic implementation of security processes and automations of the application and its infrastructure, even if there are changes in technologies and teams.

#### Better governance support

Process automation supports compliance and governance frameworks, promoting transparency in the business areas.

### Our DevOps program is different

**Adoption of Cloud:** We incorporate into your roadmap sustainable strategies for the adoption and use of Cloud services, respecting your current scenario and following the evolution of your applications.

**DataOps:** We build your operational intelligence base by connecting essential project data with the analytical power of AI, to provide teams with scalable and agile insights, support automation practices and promote continuous business efficiency.

**Specialists:** There are more than 7 years of history, 300 projects carried out and 100 clients served in Brazil and abroad. Our consultants are in constant training and are active leaders in the technical community
