
SAP Migration Service to Microsoft Azure for SAP

Why Migrate to Microsoft Azure for SAP

Challenges

Ageing hardware that needs a refresh: why?

- High cost to run
- Performance issues, and
- A significant risk to business continuity.
- Out of support

The need/want to move to S4/HANA:

- Improve and update business processes
- System performance improvements
- Not enough business intelligence flexibility
- ECC approaching end of mainstream maintenance

Ideal Solution

New environment to match business need:

- Flexible, scalable solution that is cost efficient and reliable, and negates the need for new and future hardware investments.

An intelligent ERP suite designed specifically for in-memory computing:

- Solution that support latest cloud innovations
- Improved business insights through analytics
- Updated best practice business processes

Desired Outcomes

SAP running on up-to-date environment

- Painless migration to Microsoft Azure for SAP
- Minimum of business disruption
- Confidence in the delivery team
- Modern high performing architecture HA, DR

ERP solution to support business transformation

- Technology that supports the digital evolution
- Standardised Microsoft Azure landscape across all customer applications SAP, 365, AD.
