

Turn your AI policy into action

RexCommand helps organizations take control of AI governance with centralized oversight, automated workflows, and audit-ready documentation.

Track every AI system in use, eliminate shadow AI, and enforce policies from development through deployment. RexCommand makes responsible AI scalable.

AI inventory			
ID	NAME	RISK LEVEL	STATUS
	ChatGPT	High	Under review
	OpenAI Dall-E 2	Low	Approved
	Microsoft Copilot	Moderate	Draft
	n8n	Low	Approved
	Customer Retention Prediction Engine	High	Under review

Put your AI governance program into motion

Centralize oversight across your entire AI landscape

Catalog and monitor every AI and ML system across your organization from a single, centralized hub. Eliminate shadow AI, track ownership and usage, and manage your entire AI portfolio with confidence.

Enforce governance from development to deployment

Enforce governance at every stage of the AI lifecycle by automating policies, triggering risk reviews, and integrating with existing workflows. Ensure compliance is continuous and embedded, not reactive or manual.

Demonstrate compliance with global frameworks

Demonstrate compliance with global regulations by aligning with frameworks like NIST, ISO 42001, GDPR, and the EU AI Act. Maintain a complete audit trail and export reports instantly to stay ready for reviews and audits at any time.

Governance you can trust, ROI you can prove

80% boost in trust and innovation¹

4 in 5 organizations believe adopting responsible AI practices strengthens internal trust and accelerates innovation.

3x more likely to roll out AI²

Organizations with strong data and AI governance are 3x more likely to move from AI pilots to full-scale deployment.

18% higher revenue³

Companies that embed AI governance report an average revenue increase of 18%, driven by safer, faster AI adoption.

How it works

1

Build your AI policy

Lay the foundation for responsible AI from day one. Apply your existing policies or use our built-in templates to get started fast.

2

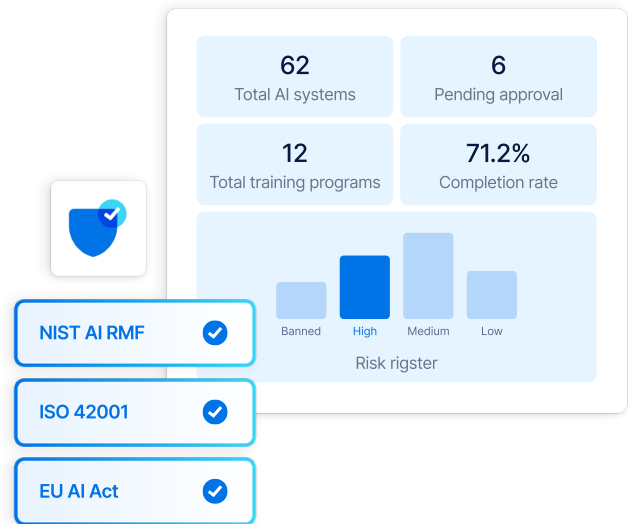

Register every AI system in use

From Copilot and ChatGPT to n8n and internal models, create a dynamic inventory of your organization's AI tools.

3

Maintain approval workflows

Add checkpoints like risk reviews or human sign-off before going live. Every AI deployment follows a repeatable process with clear ownership.

What makes RecordPoint different?

RexCommand delivers purpose-built AI governance you can trust, with centralized visibility, policy automation, and audit-ready oversight across every AI system in use.

Enterprise-grade governance built to scale with AI

Our foundation in classification and lifecycle management brings proven, scalable governance to AI, across every data format, source system, and use case.

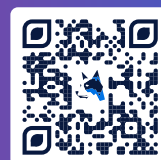

Policy enforcement, not just risk reporting

Governance means control — not just visibility. We enforce policies in real time and govern how data is accessed, used, and protected in all your AI tools.

Full-spectrum AI lifecycle visibility

Track systems, datasets, risk approvals, and audit history in one place, ensuring nothing slips through the cracks.
