

# Redoflow Requirements Assessment

D365 Business Central

## Sisällys

Service Introduction .....	3
----------------------------	---

In this document is introduced Redocap Ltd. Process consulting models and results. The need for consultation is different for every customer, so models and results introduced in this documentation are mainly guidelines for the start of effective collaboration. The consultants of Redocap Ltd. aim to support customers' needs as effectively as possible. Operating models are formed individually for the customer.

# Service Introduction

The assessment is separated to three stages: assess, SWOT-analysis, and requirements mapping.

## **Stage 1: Assess**

A two-hour long meeting with the agenda of going through the client's business, operations, processes and needs. The goal is to get a clear of the functions that are required from the new system.

## **Stage 2: SWOT-analysis**

A SWOT-analysis is created based on the assessment meeting. The SWOT-analysis includes all the strengths, weaknesses, opportunities, and threats which the customer may face during the acquirement and implementation of a new system. The aim of SWOT-analysis is to give a clear picture of what needs to be considered on a high level when looking for a new system.

## **Stage 3: Requirements mapping**

During requirements mapping, all the client's operations are reviewed on a visual map. The map presents all the operational areas, their relations to each other, and the requirements for each area. The Requirements map can be used as a directive document for the acquirement of a new system.
