Regain for CSV to vCard Converter Working Guideline

Looking for a fast and accurate way to **convert CSV contacts to vCard (VCF)**? The [Regain CSV to vCard Converter](#) is a powerful, user-friendly tool designed to simplify contact migration across platforms and devices. Whether you need to import contacts into Outlook, Office 365, Exchange Server, or your mobile device, this tool ensures flawless conversion with complete field mapping and data accuracy.

Supported File Formats & Platforms

File Formats Supported:

- **CSV (Input)**
- **vCard (VCF – Output)**
- **Also supports PST, MSG, ICS file types**

Compatible Email Clients:

- **Microsoft Office 365**
- **Microsoft Exchange Server**
- Outlook and other vCard-compatible applications

This wide compatibility makes Regain an ideal solution for professionals managing contact transfers in corporate environments or personal accounts.

Key Features of Regain CSV to vCard Converter

- Converts large CSV files into vCard format in bulk
- Supports **vCard versions 2.1, 3.0, and 4.0**
- Preserves full contact details: names, phone numbers, email, addresses, job titles, and more
- Offers custom field mapping for precise data alignment
- Compatible with cloud and desktop email platforms

How It Works

1. Open the application and load your CSV file.
2. Preview contact entries and map CSV fields to vCard fields.
3. Choose your vCard version and destination.
4. Click **Convert**—your VCF file is ready for import!

Why Choose Regain?

Whether you're migrating contacts to **Office 365**, syncing with your **Exchange Server**, or importing them to a phone or CRM, **Regain [CSV to vCard Converter](#)** makes the process simple, accurate, and stress-free.
