

## Move Beyond e-Discovery with RelativityOne

RelativityOne gives you a complete set of flexible tools in one secure, expert platform to tackle every aspect of e-discovery and beyond. With an open framework, RelativityOne allows you to design, build, and integrate proprietary applications on top of the platform to meet your unique challenges.

### Investigations

Stay ahead of risks with one comprehensive platform. With your data secured in a single platform, your teams can manage investigations from beginning to end, even when working with outside vendors. Dashboards, data visualizations, and digestible reports give you the insight you need to investigate the merits of a claim and take action based on what you find.

A senior executive for a publicly traded company was fired for underperformance. On his way out the door, the executive made a serious allegation that the company was falsifying financial reports. [Drinker Biddle](#) needed to quickly examine the facts. The team set to work straightaway, pulling the email box contents for the former executive, his peers, superiors, and direct reports, and loading the data into Relativity. By exploring the evidence and using granular tagging and coding designations to organize the information and track the story as it unfolded, they were able to shut down the whistleblower by proving with certainty that the executive fabricated the claim.

### Information Governance

Across the globe, data privacy and protection regulations are providing organizations and regulatory groups with enough work to keep them busy for years to come. Managing shifting regulatory requirements that differ from region to region while keeping up with data requests can be a daunting challenge. With RelativityOne, you can better understand and control your data to respond quickly as new requests come in.

Federal agencies face large backlogs of requests and intense pressure to stay on pace in responding, and these requests have increased up to 20% annually. Deloitte built a FOIA application to leverage Relativity's data processing, analytics, technology-assisted review, and redaction functionality with a workflow designed to meet the unique needs of FOIA processing, including the ability to automate redactions—a game-changing combination of features for this cumbersome process.

### Mergers & Acquisitions

M&A activity brings vast amounts of information to parse through. You need to home in on the critical data for pre-merger due diligence, post-merger integration, and the contract review process. Machine learning, visual data analytics, and reporting capabilities in RelativityOne can be the key to make the review process smarter, faster, and more efficient. Save time and money by eliminating manual reviews so your team can get through the paperwork faster to deliver value to your clients.

When a large global technology company was gearing up for a looming transaction, Reed Smith was tasked with managing and tracking contract negotiations from multiple parties across 55 clauses of a Master Service Agreement (MSA) and strategizing for the impending deal. Jumping into the contracts on a Friday morning, they utilized the functionality of [Heretik's Viewer](#), a contract management application seamlessly integrated with Relativity. The application helped to categorize contract types, identify relevant sections, and organize key elements within the contracts themselves to cut the review time by 70%—getting their weekend back and closing the deal by Monday.
