SQL Server Migration to Azure SQL Managed Instance

WHAT WE OFFER

SQL Managed Instance provides different levels of isolation. These levels provide a high level of isolation and security for your data. We walk with you through the journey of moving your on-premise SQL server instances or SQL on VM to the Azure SQL Database Managed Instance.

Accelerate application modernisation with the latest SQL Server capabilities in the cloud. SQL Managed Instance provides an entire SQL Server instance within a managed service, so you can continue to use familiar tools and SQL Server features such as cross-database queries and linked server.

Reliance Azure SQL Managed Instance migration service leverages the industry standard security of Azure SQL Database to remediate potential threats in real time with intelligent threat protection and proactive vulnerability assessment alerts.

Boost productivity and operate more efficiently by benefiting from the 99.9% uptime of Azure SQL Database Managed Instance while letting the service perform time-consuming and complex tasks on your behalf. Features such as built-in high availability, disaster recovery and automated backups are extra benefits you derive from Azure SQL Database Managed Instance.

WHAT OUR CUSTOMERS ARE SAYING

"We started using Azure to host my services in the mid of 2018 and I must say the experience has been nothing but stellar. Their migration was quick and was performed smoothly. We did not need to modify configurations."

– Edward Ilalokhoin, I.T Department, AppZone Group
