Guidance for the Skill & Will Matrix App

Create & Analyze Teams

Organize and view your teams with ease. The App allows you to create new teams, manage team members, and view team dynamics in a simple, intuitive interface.

Performance Trends Over Time

Effortlessly track and analyze team performance, behavior, and dynamics in real-time. The app includes a graphical representation of the skill and will scores over time, allowing you to identify all trends and patterns.

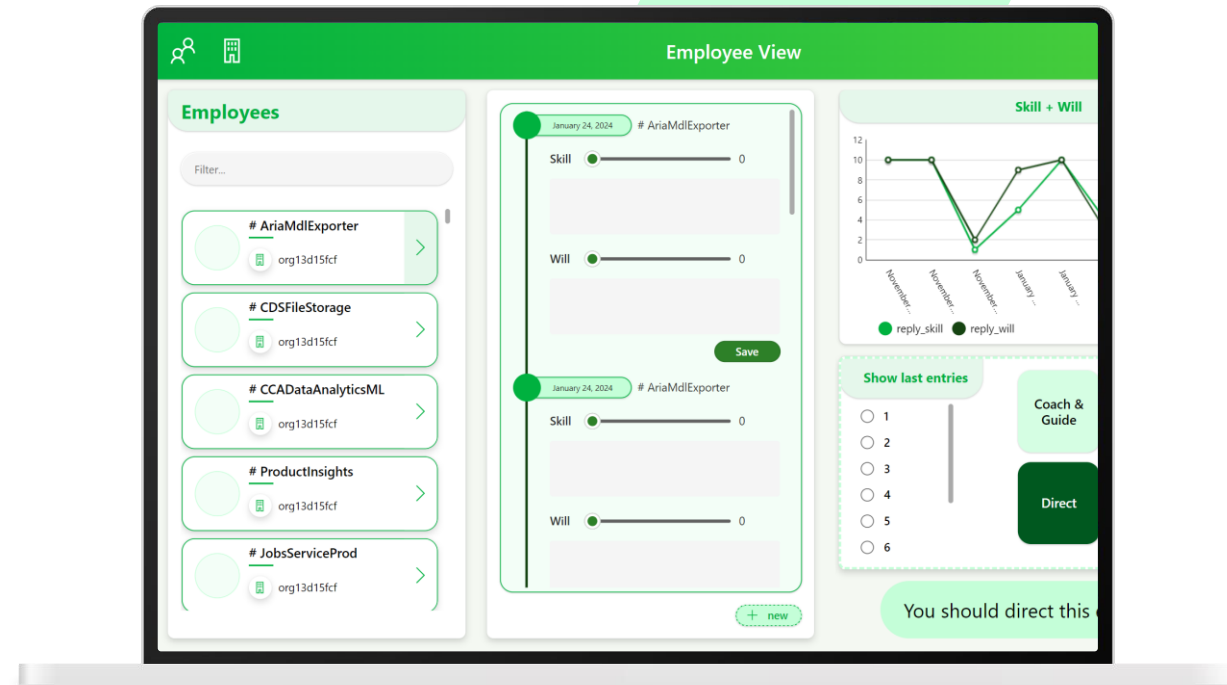

Real-Time Analytics & Guidance

The Skill&Will App provides a matrix to determine the best management approach. This strategic tool helps you understand at a glance the leadership style that each team or employee needs.

Employee Skill & Will Tracking

Monitor and assess the skill and will levels of each employee. The Skill&Will App offers an employee view where you can track individual progress and adapt your management strategy accordingly.

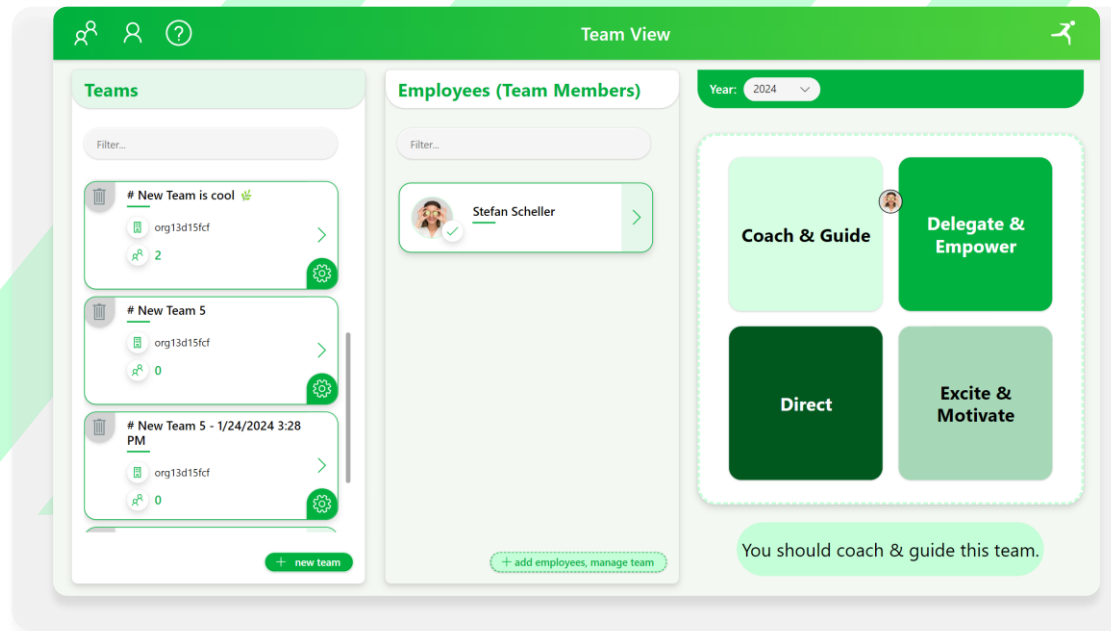

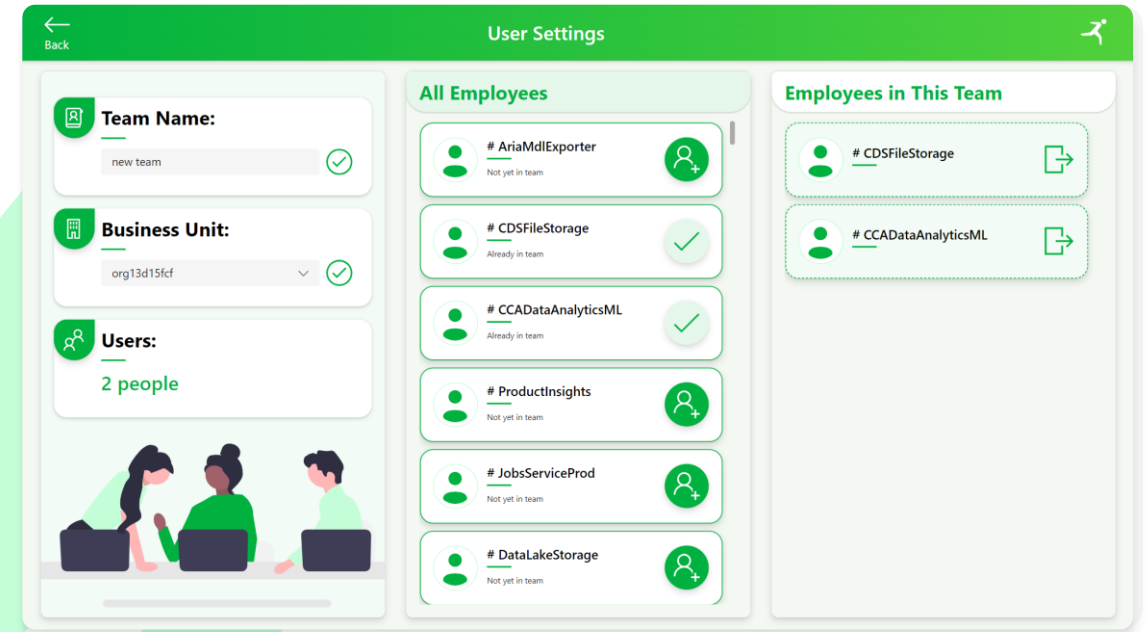

THERE'S A LOT IN THE BOX!

User Management & Security Roles

Skill Will Matrix: Organization Manager

The Organization Manager is the highest possible business role for this application. A person with this role has the most rights, i.e. they can view all app-related elements and data records of the entire organization (across all business units and teams). They may also be able to make administrative settings directly in the app.

Skill Will Matrix: Unit Manager

The Unit Manager sees all elements in his visibility area, i.e. in his business unit and the business units below it. A person is always assigned to a business unit on the Microsoft Power Platform (change possible). If necessary, the unit manager has the option of making administrative settings for their business unit directly in the app.

Skill Will Matrix: Basic User

The basic user only sees elements that affect them or are relevant to them. As a rule, this is data that has been generated by them or is generated for them. This role is therefore predestined for the majority of users.

The security roles build on each other. An Organization Manager is not only assigned the "Organization Manager" role, but also "Basic User" and "Unit Manager". The "Unit Manager" therefore also receives the "Basic User" role.

Sharing Apps

After you have installed the app from the AppSource, share the app with employees (visibility) and then assign security roles (visibility of elements) to the employees.

Share Canvas Apps with your Organization

Introduction of Hierarchy Levels

To utilize the hierarchy levels, you can create business units. You then assign employees to a business unit. An employee can (basically) only work in one business unit.
