

Zero Trust with Entra ID

Securing identities and access for Microsoft 365, Dynamics 365, Azure and across clouds with Microsoft Zero Trust

Industry & High-level Summary

Organizations face hybrid work, rapid cloud adoption, and rising regulatory pressure. Perimeter security no longer suffices. A Zero Trust strategy anchored in Microsoft Entra ID puts identity at the center, validates access continuously, and enforces least-privilege across Microsoft services like Microsoft 365, Dynamics 365 and Azure and non-Microsoft environments (SaaS, AWS/GCP, on-prem).

Primary challenges

- Fragmented identity systems across clouds
- Credential theft and phishing attacks
- Compliance pressure for secure access and auditing

Ideal solution

A Zero Trust identity platform with centralized control, automated policy enforcement, and seamless multi-cloud integration. Powered by Microsoft Entra ID and IaC automation

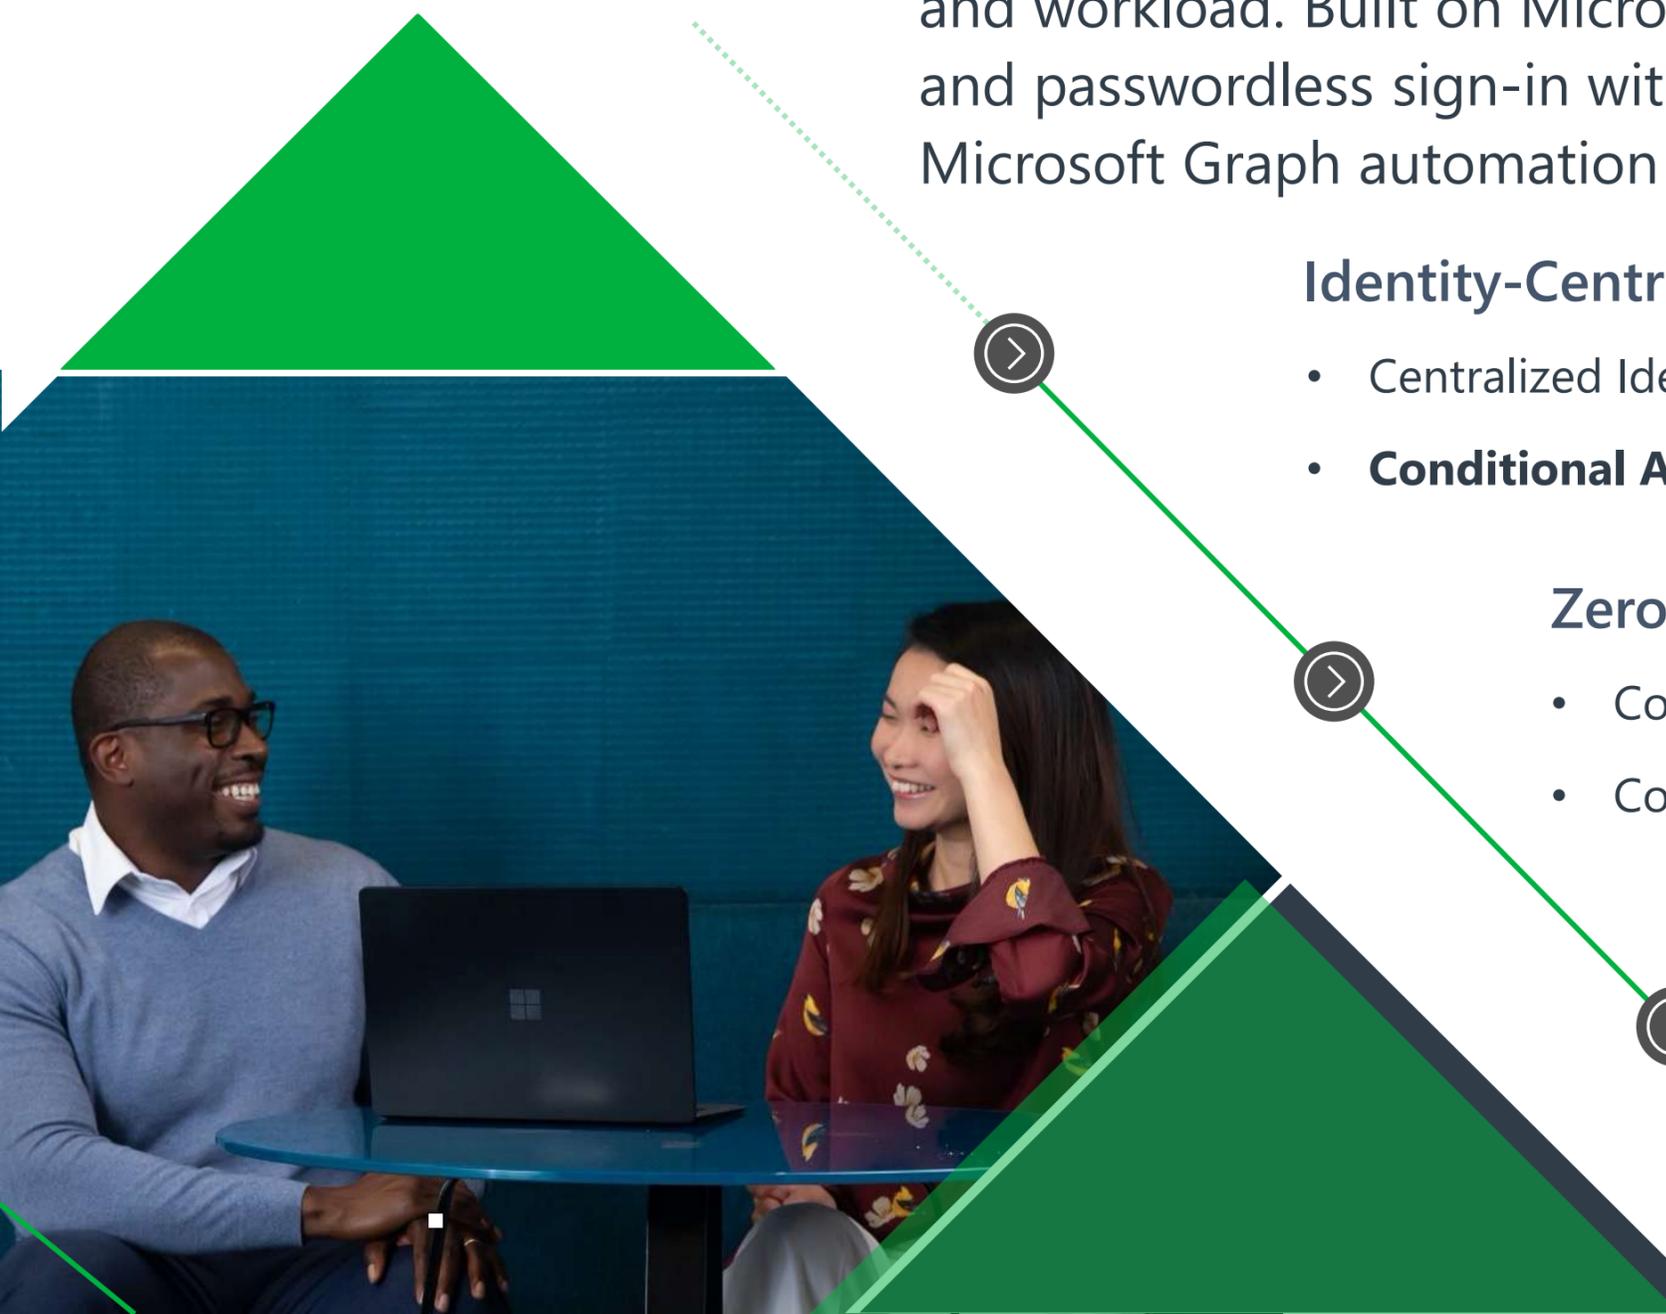

Desired outcomes

- Reduced identity-related risks
- Faster, compliant onboarding and access management
- Consistent Zero Trust enforcement across hybrid/multi-cloud

Entra Zero Trust Framework by Reply

Our Zero Trust solution helps organizations secure access for every user, device and workload. Built on Microsoft Entra ID, it combines Conditional Access, MFA, and passwordless sign-in with automated deployment using Bicep and Microsoft Graph automation (PowerShell).

A decorative graphic on the left side of the slide. It features a large green triangle at the top, a dark blue triangle below it, and a smaller green triangle at the bottom. A white dotted line starts from the top triangle and descends through three circular icons containing a right-pointing arrow. A solid green line continues from the bottom icon, extending towards the right side of the slide.

Identity-Centric Security

- Centralized Identity and access with Microsoft Entra ID
- **Conditional Access** and risk-based policies

Zero Trust Enforcement Across Clouds

- Consistent policy deployment in **hybrid and multi-cloud**
- Continuous validation of users, devices and sessions

Automated and Scalable Deployment

- Customer-hosted orchestration & control
- Standardized Entra policies **at scale**
- Report-only pilots → phased, auditable rollout

Reply + Microsoft Entra ID

Together, we deliver a Zero Trust architecture tailored to multi-cloud environments. By integrating Microsoft Entra ID with our expertise in infrastructure & identity automation automation (Bicep + Microsoft Graph/PowerShell), customers gain **consistent security policies, simplified access management, and measurable compliance improvements.**

Strengthen security posture

Microsoft's Zero Trust model, delivered through Entra ID, enforces least-privilege access and continuous verification.

Simplify operations

Centralized identity management reduces complexity and lowers IT admin overhead.

Enable secure productivity

Employees gain seamless, secure access to apps and data from anywhere, improving collaboration and user experience.
