Frequently asked questions

Search

- SharePoint
- SharePoint Foundation
- SharePoint Online
- SharePoint Online

Microsoft SharePoint is a cloud-based service that helps organizations share and manage content, knowledge, and applications.

- Empower teamwork
- Quickly find information
- Seamlessly collaborate across the organization

The resources on this page are designed to get you started. Depending on the needs of your organization, you may want to about [migration](#) and [governance](#) options before you start rolling SharePoint out to your users. If you're ready to get started, about [collaboration](#) options and how to create a [modern intelligent intranet](#). As you roll out SharePoint to your organization, then get the most out of these tools.

About the Accelerator

The Accelerator by WM Reply is a set of standalone components that can be added to SharePoint Online. The Accelerator components work alongside the native SharePoint functionality and *plug the gaps* in areas that we have identified as playing an important role in SharePoint solutions.

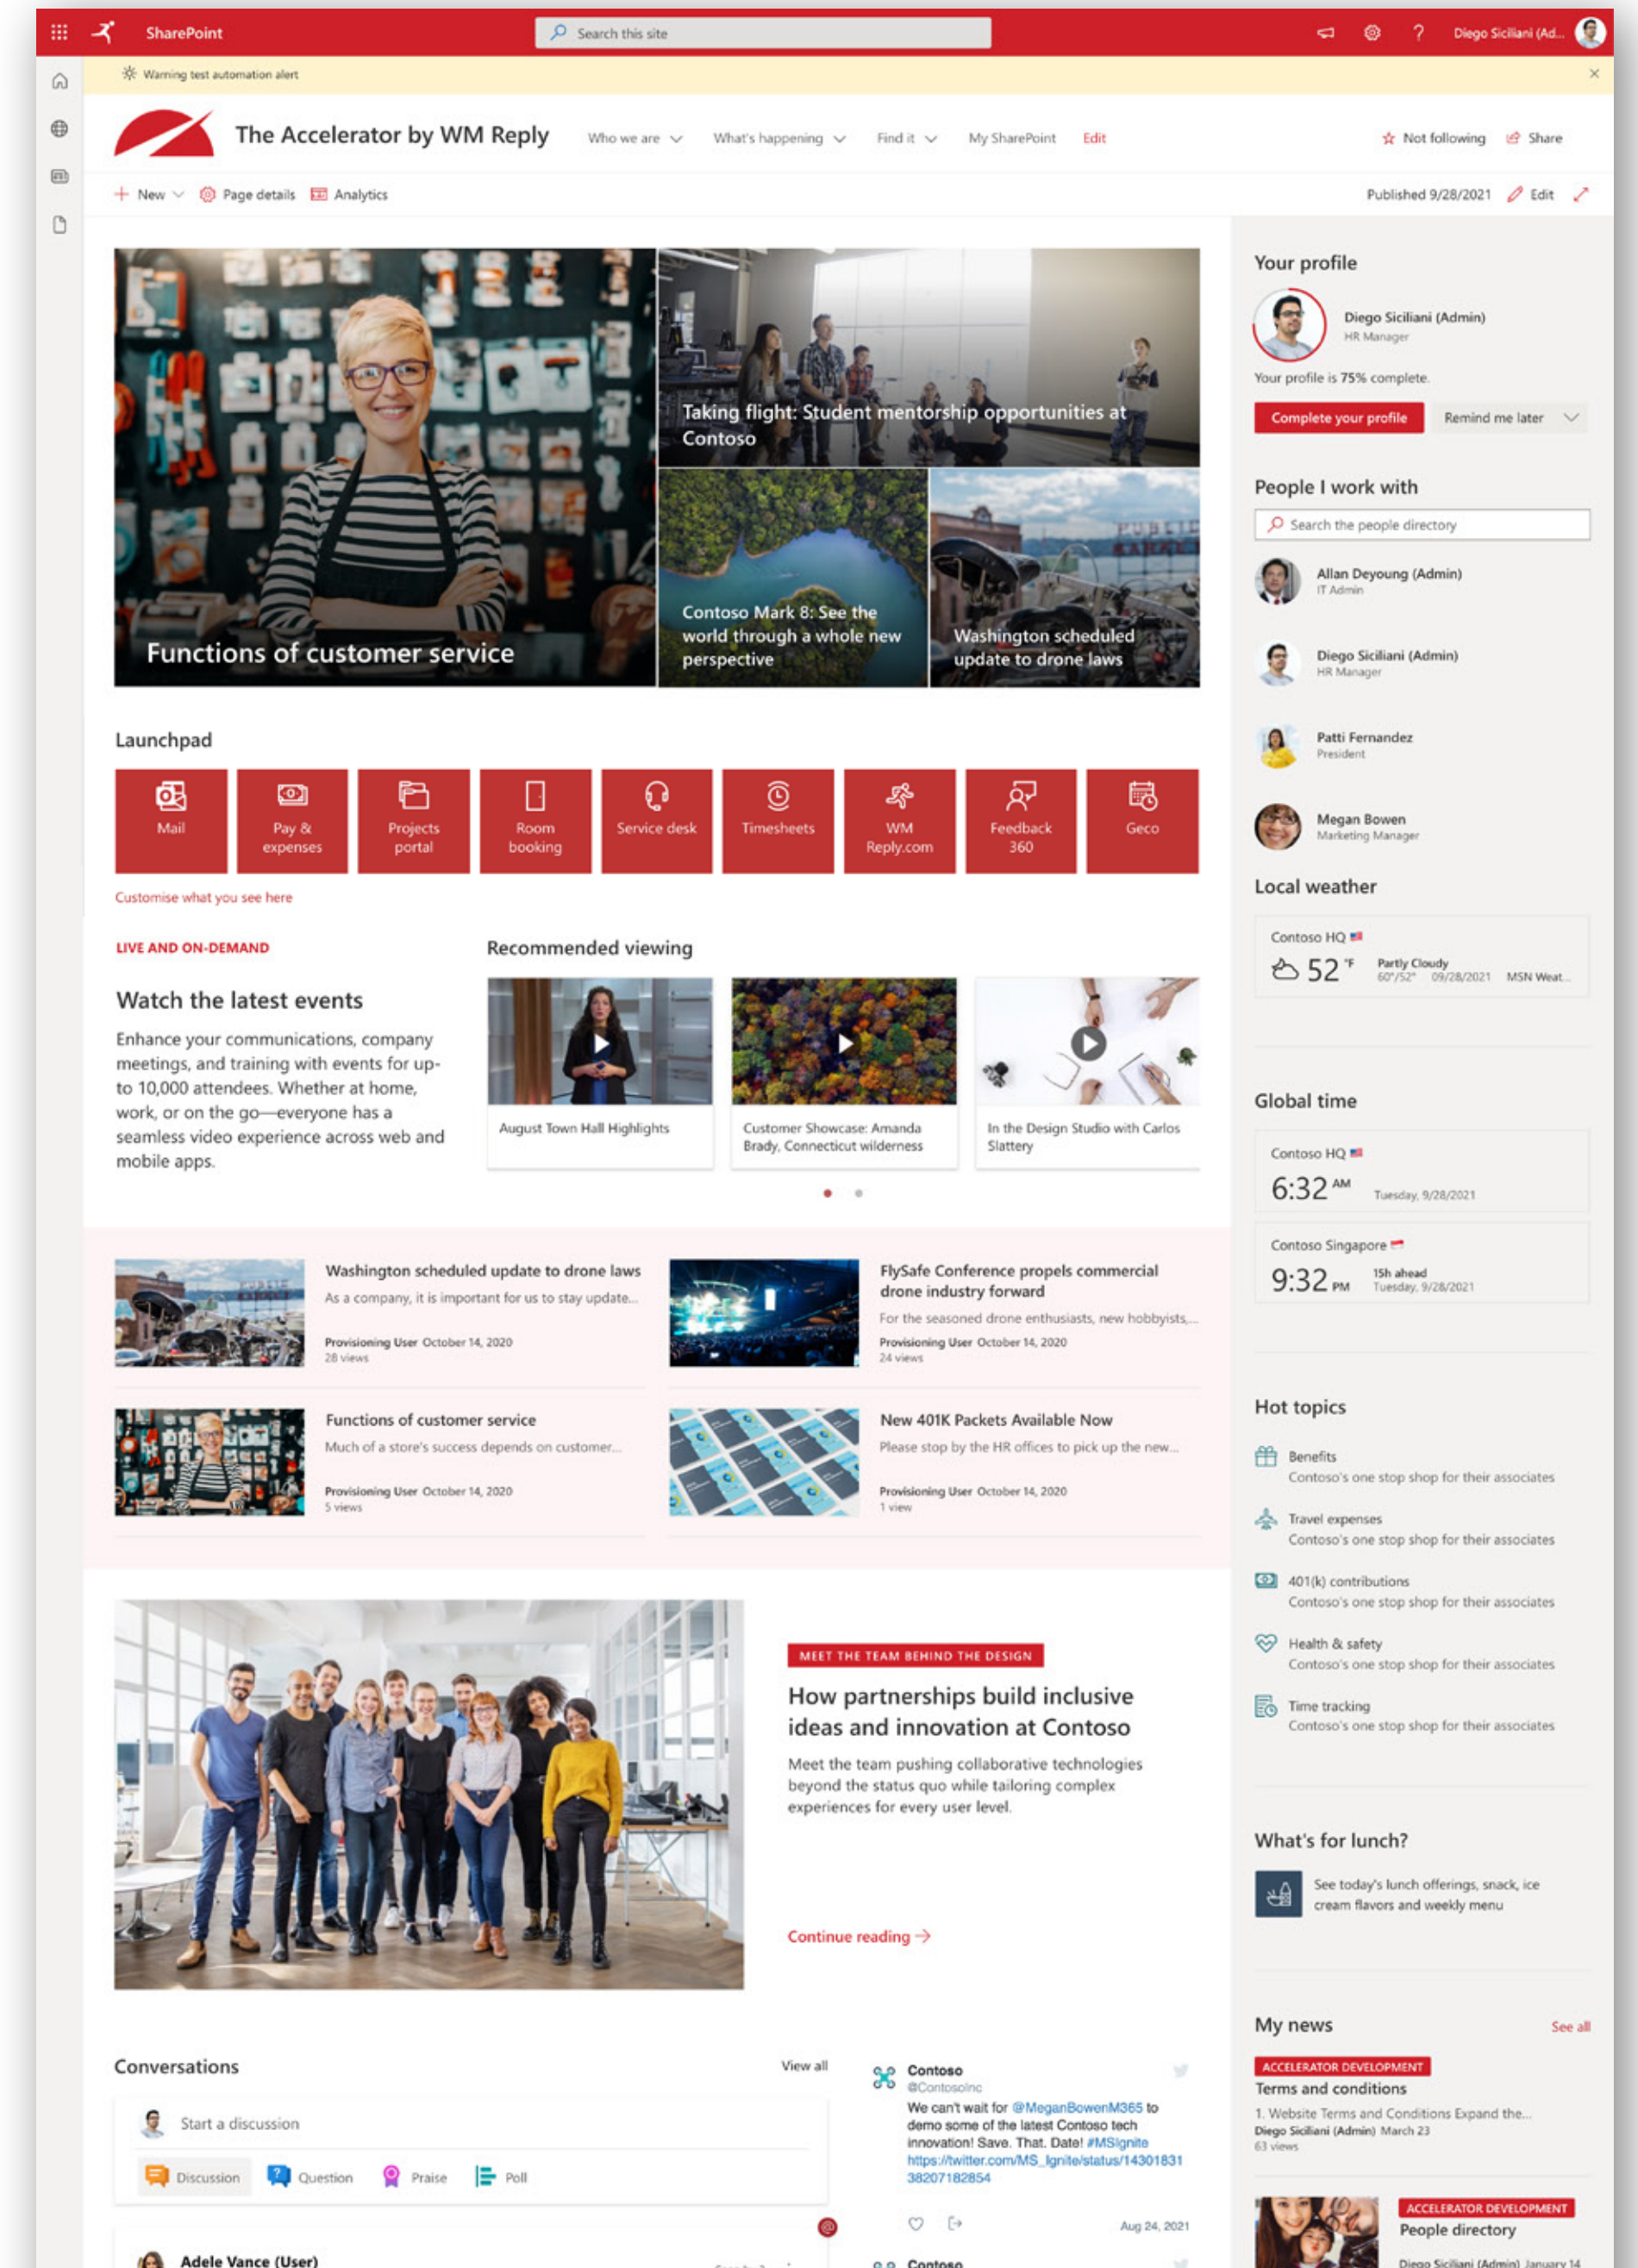

Digital Workplace

Content Creation

Enterprise Readiness

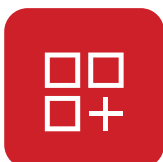

Each component has been developed with the following goals:

- Complementing native functionality
- Consistent with an evergreen model of continuous improvement
- Standalone / no commitment to a specific vendor required

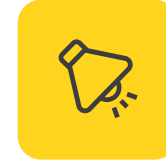

Contents

Digital Workplace

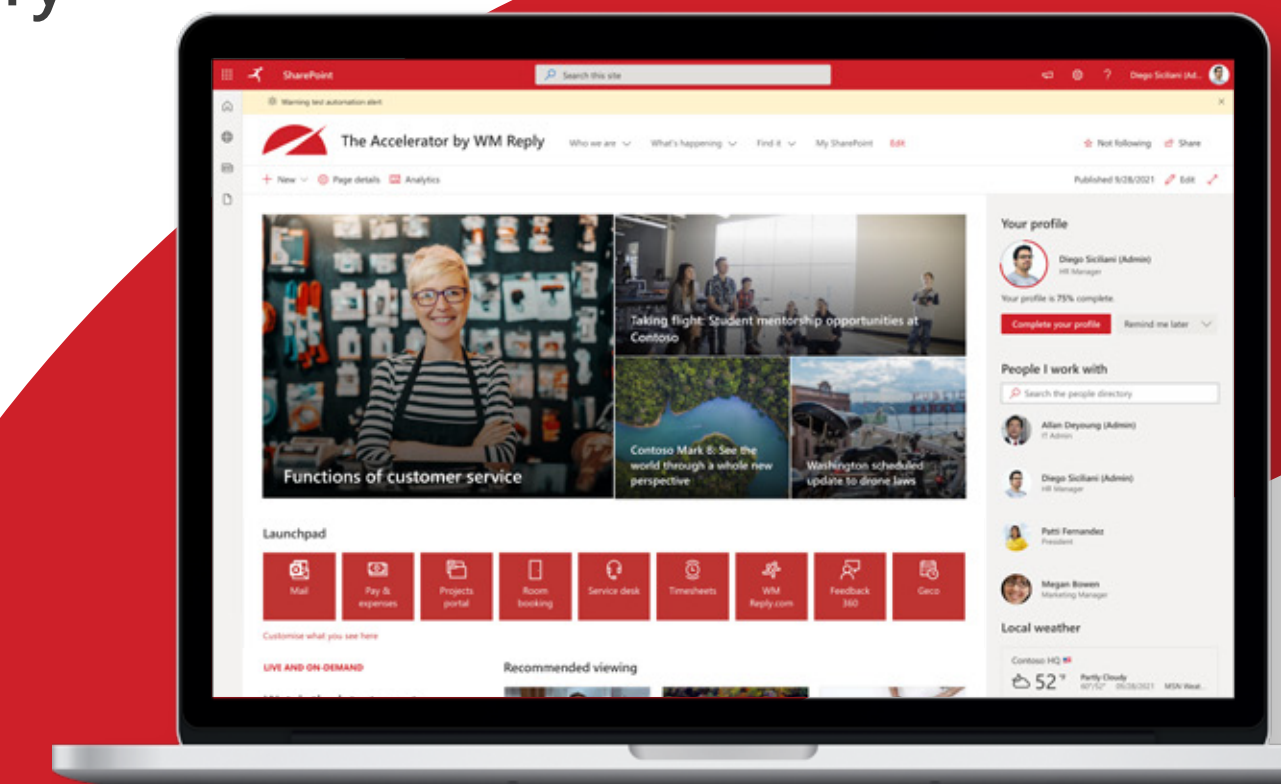

-  Launchpad
-  Launchpad Directory
-  People Directory
-  Noticeboard
-  Share Price
-  Audience Subscription
-  Rate My Day

Content Creation

-  Image Map
-  Accordion
-  Tabs
-  Carousel
-  Spotlight
-  Table of Contents
-  Page Authors

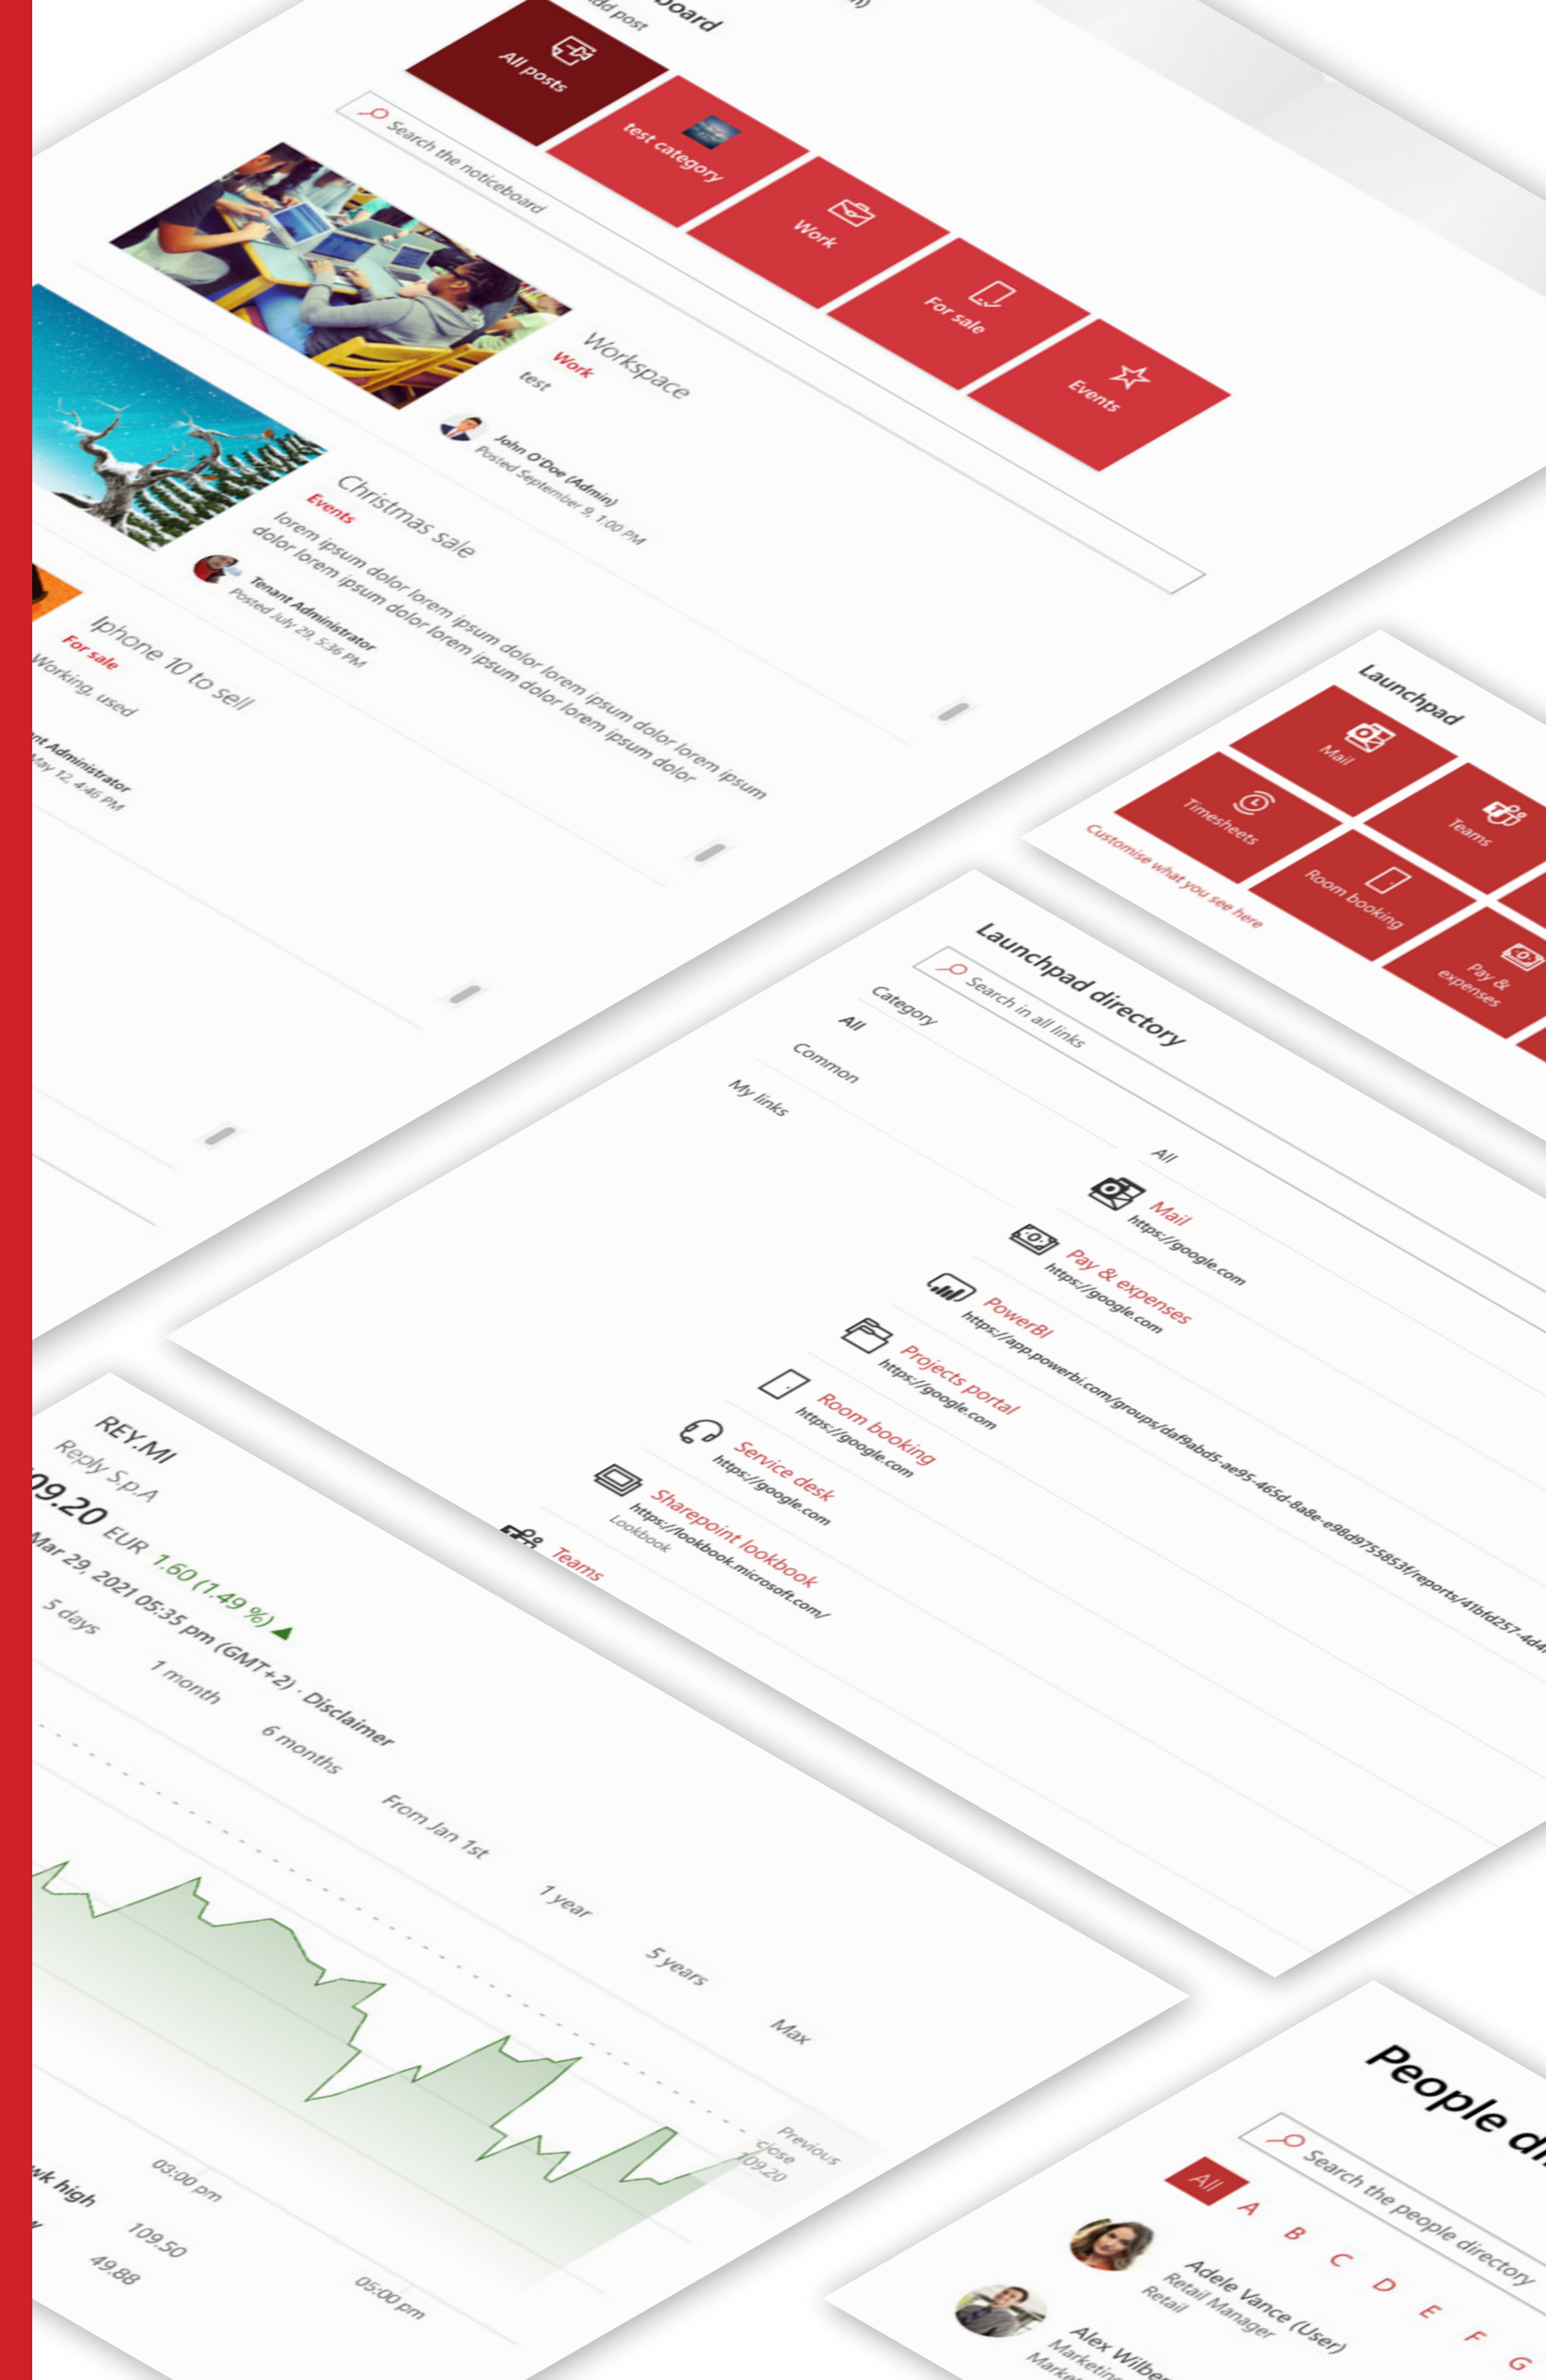

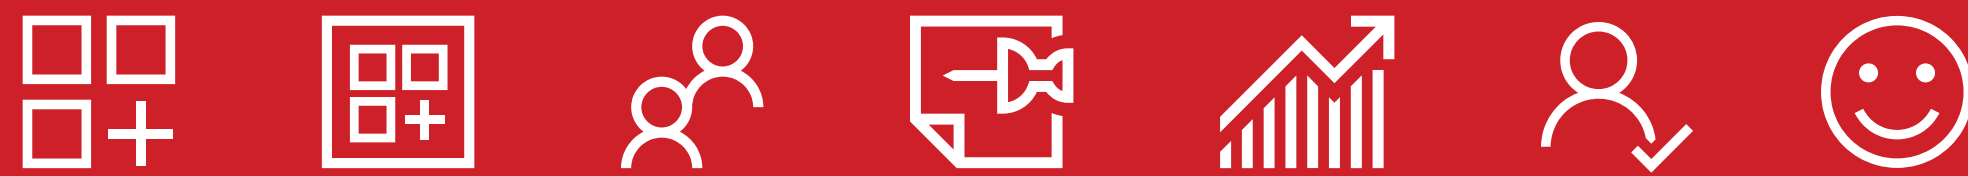

Enterprise Readiness

-  Content Manager Dashboard
-  Page Tour
-  Site Analytics
-  Alerts
-  Alerts Directory
-  User Profile
-  Page Tags

Digital Workplace

Components that allow you to place your SharePoint site at the centre of your digital workplace, surfacing information from across Office 365 and beyond.

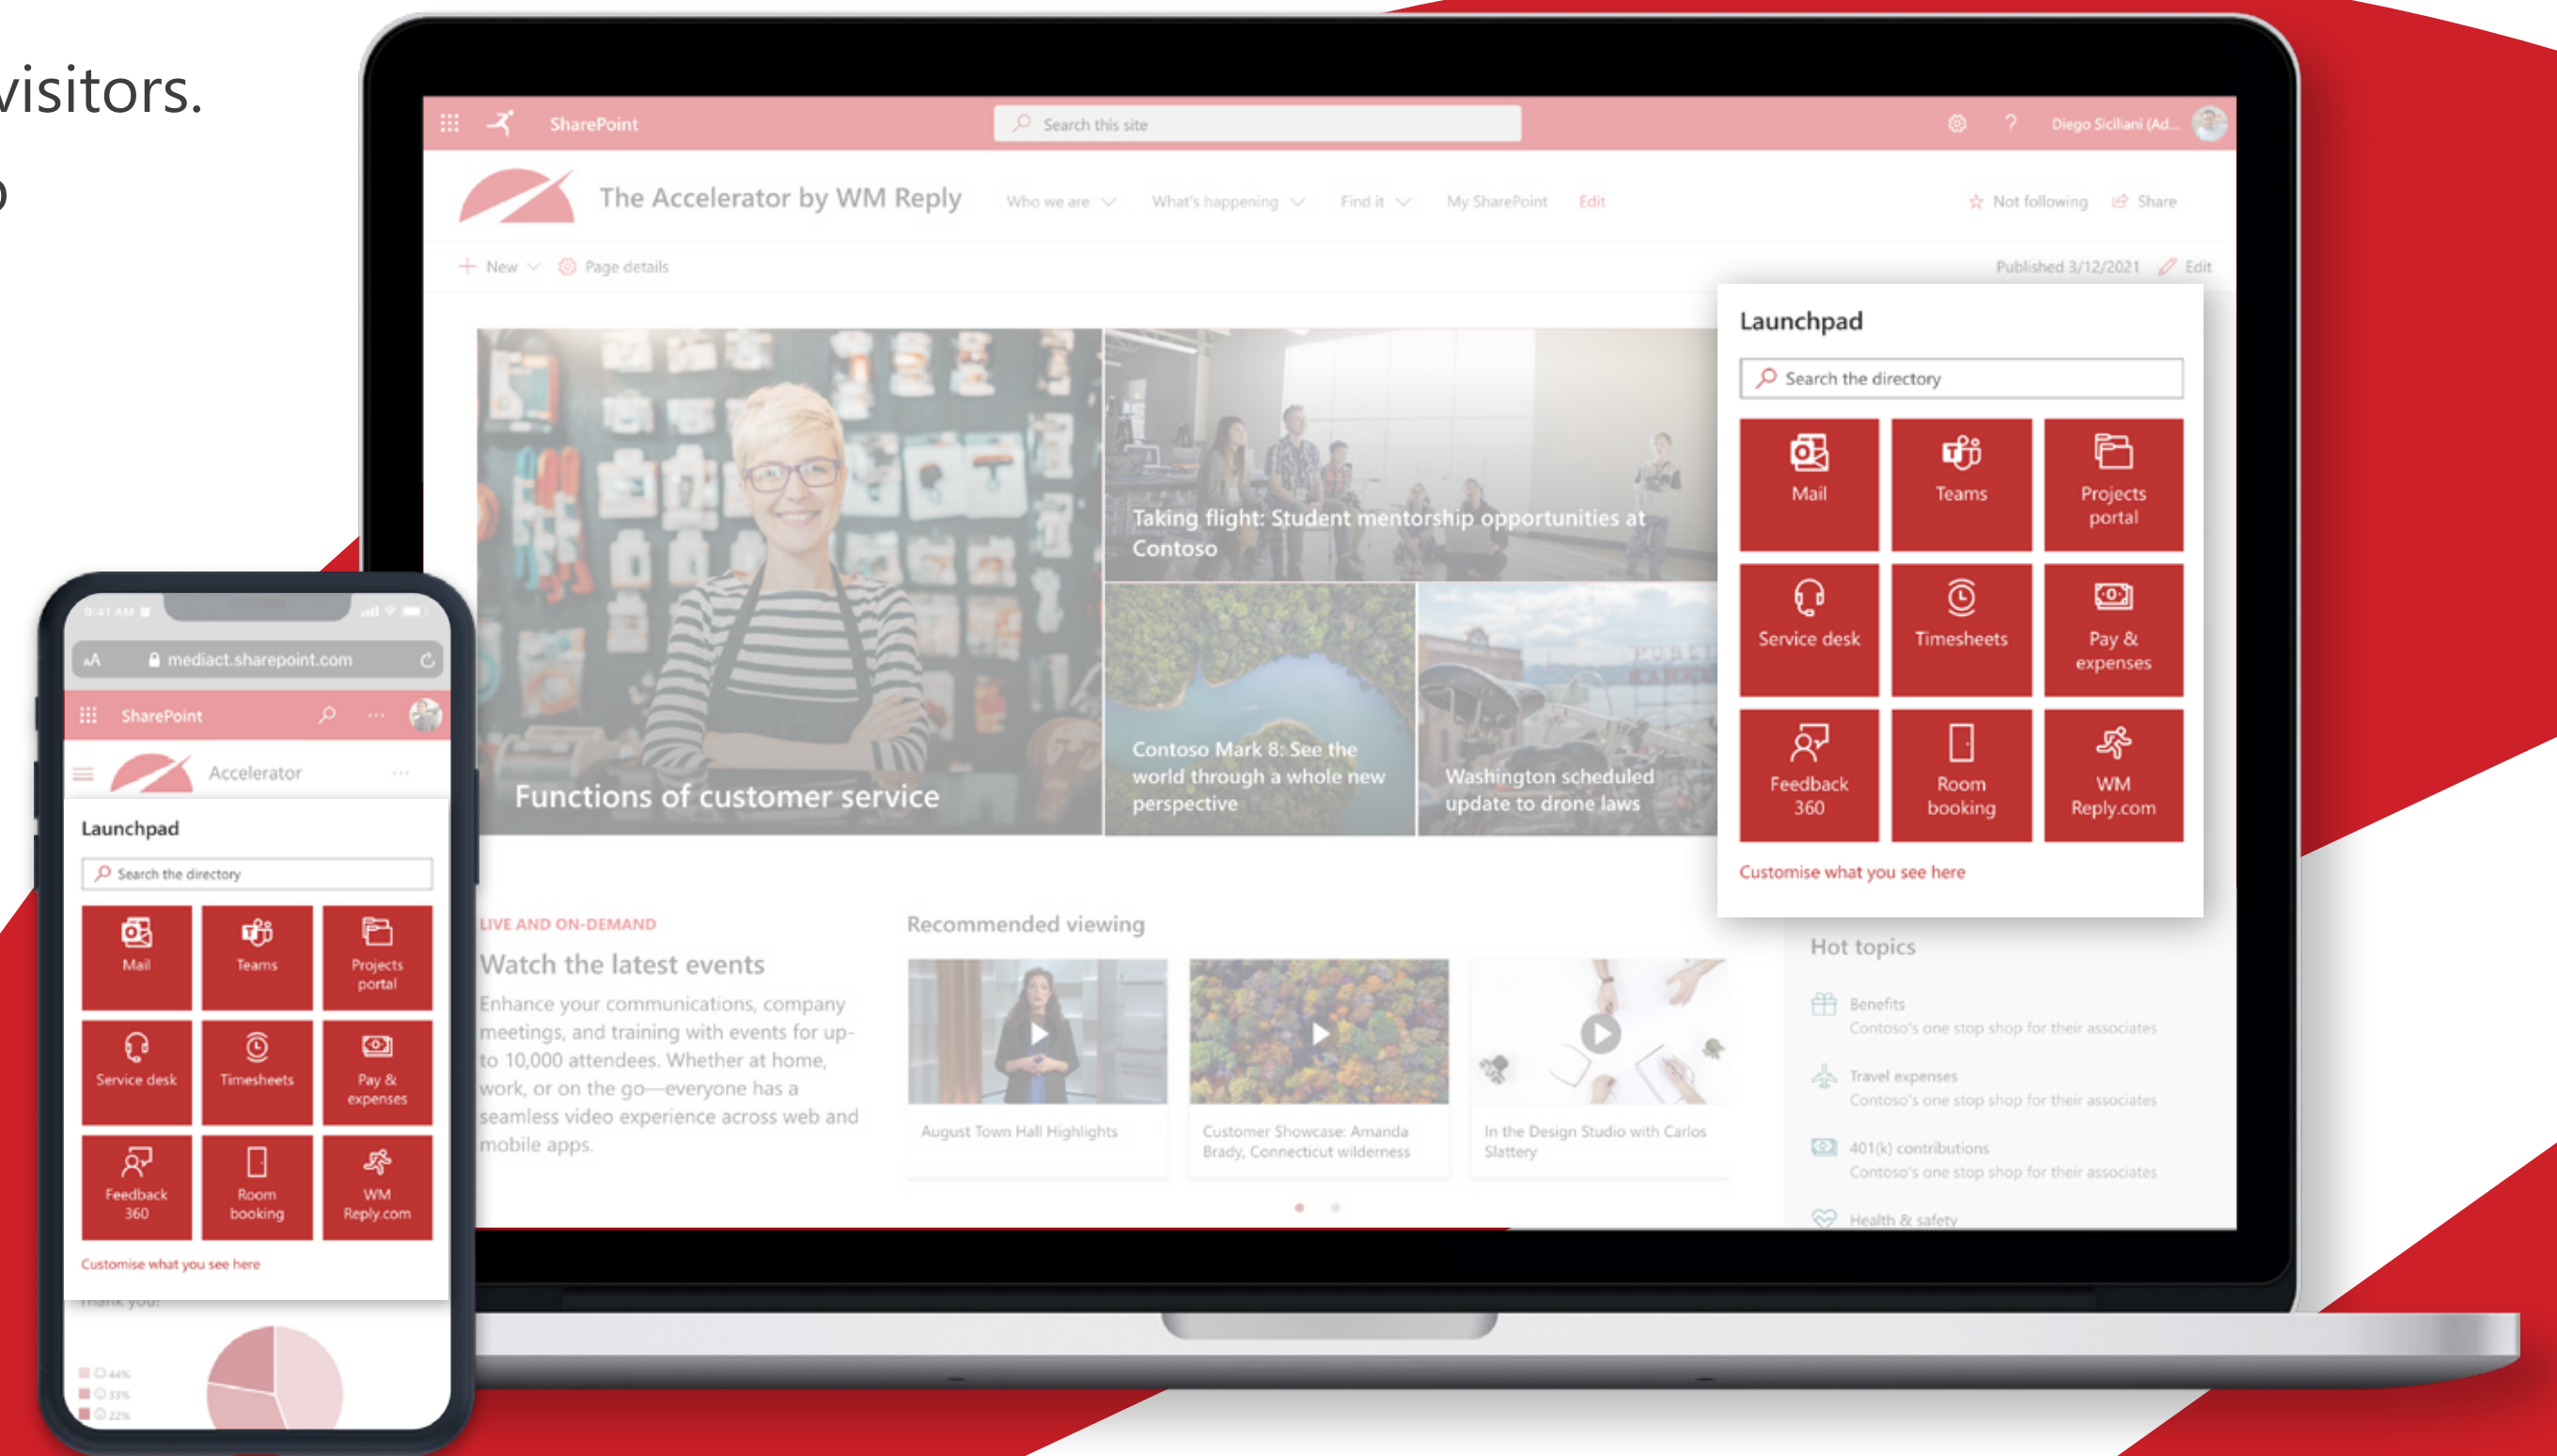

Launchpad

Great for: intranet home pages

The Launchpad web part displays a curated list of links to site visitors. Content authors can set links to be mandatory and targeted to specific audiences. In addition, users can add their own links.

Features

- Links managed centrally
- Audience targeting supported
- Users can add their own links
- Fully responsive for mobile devices

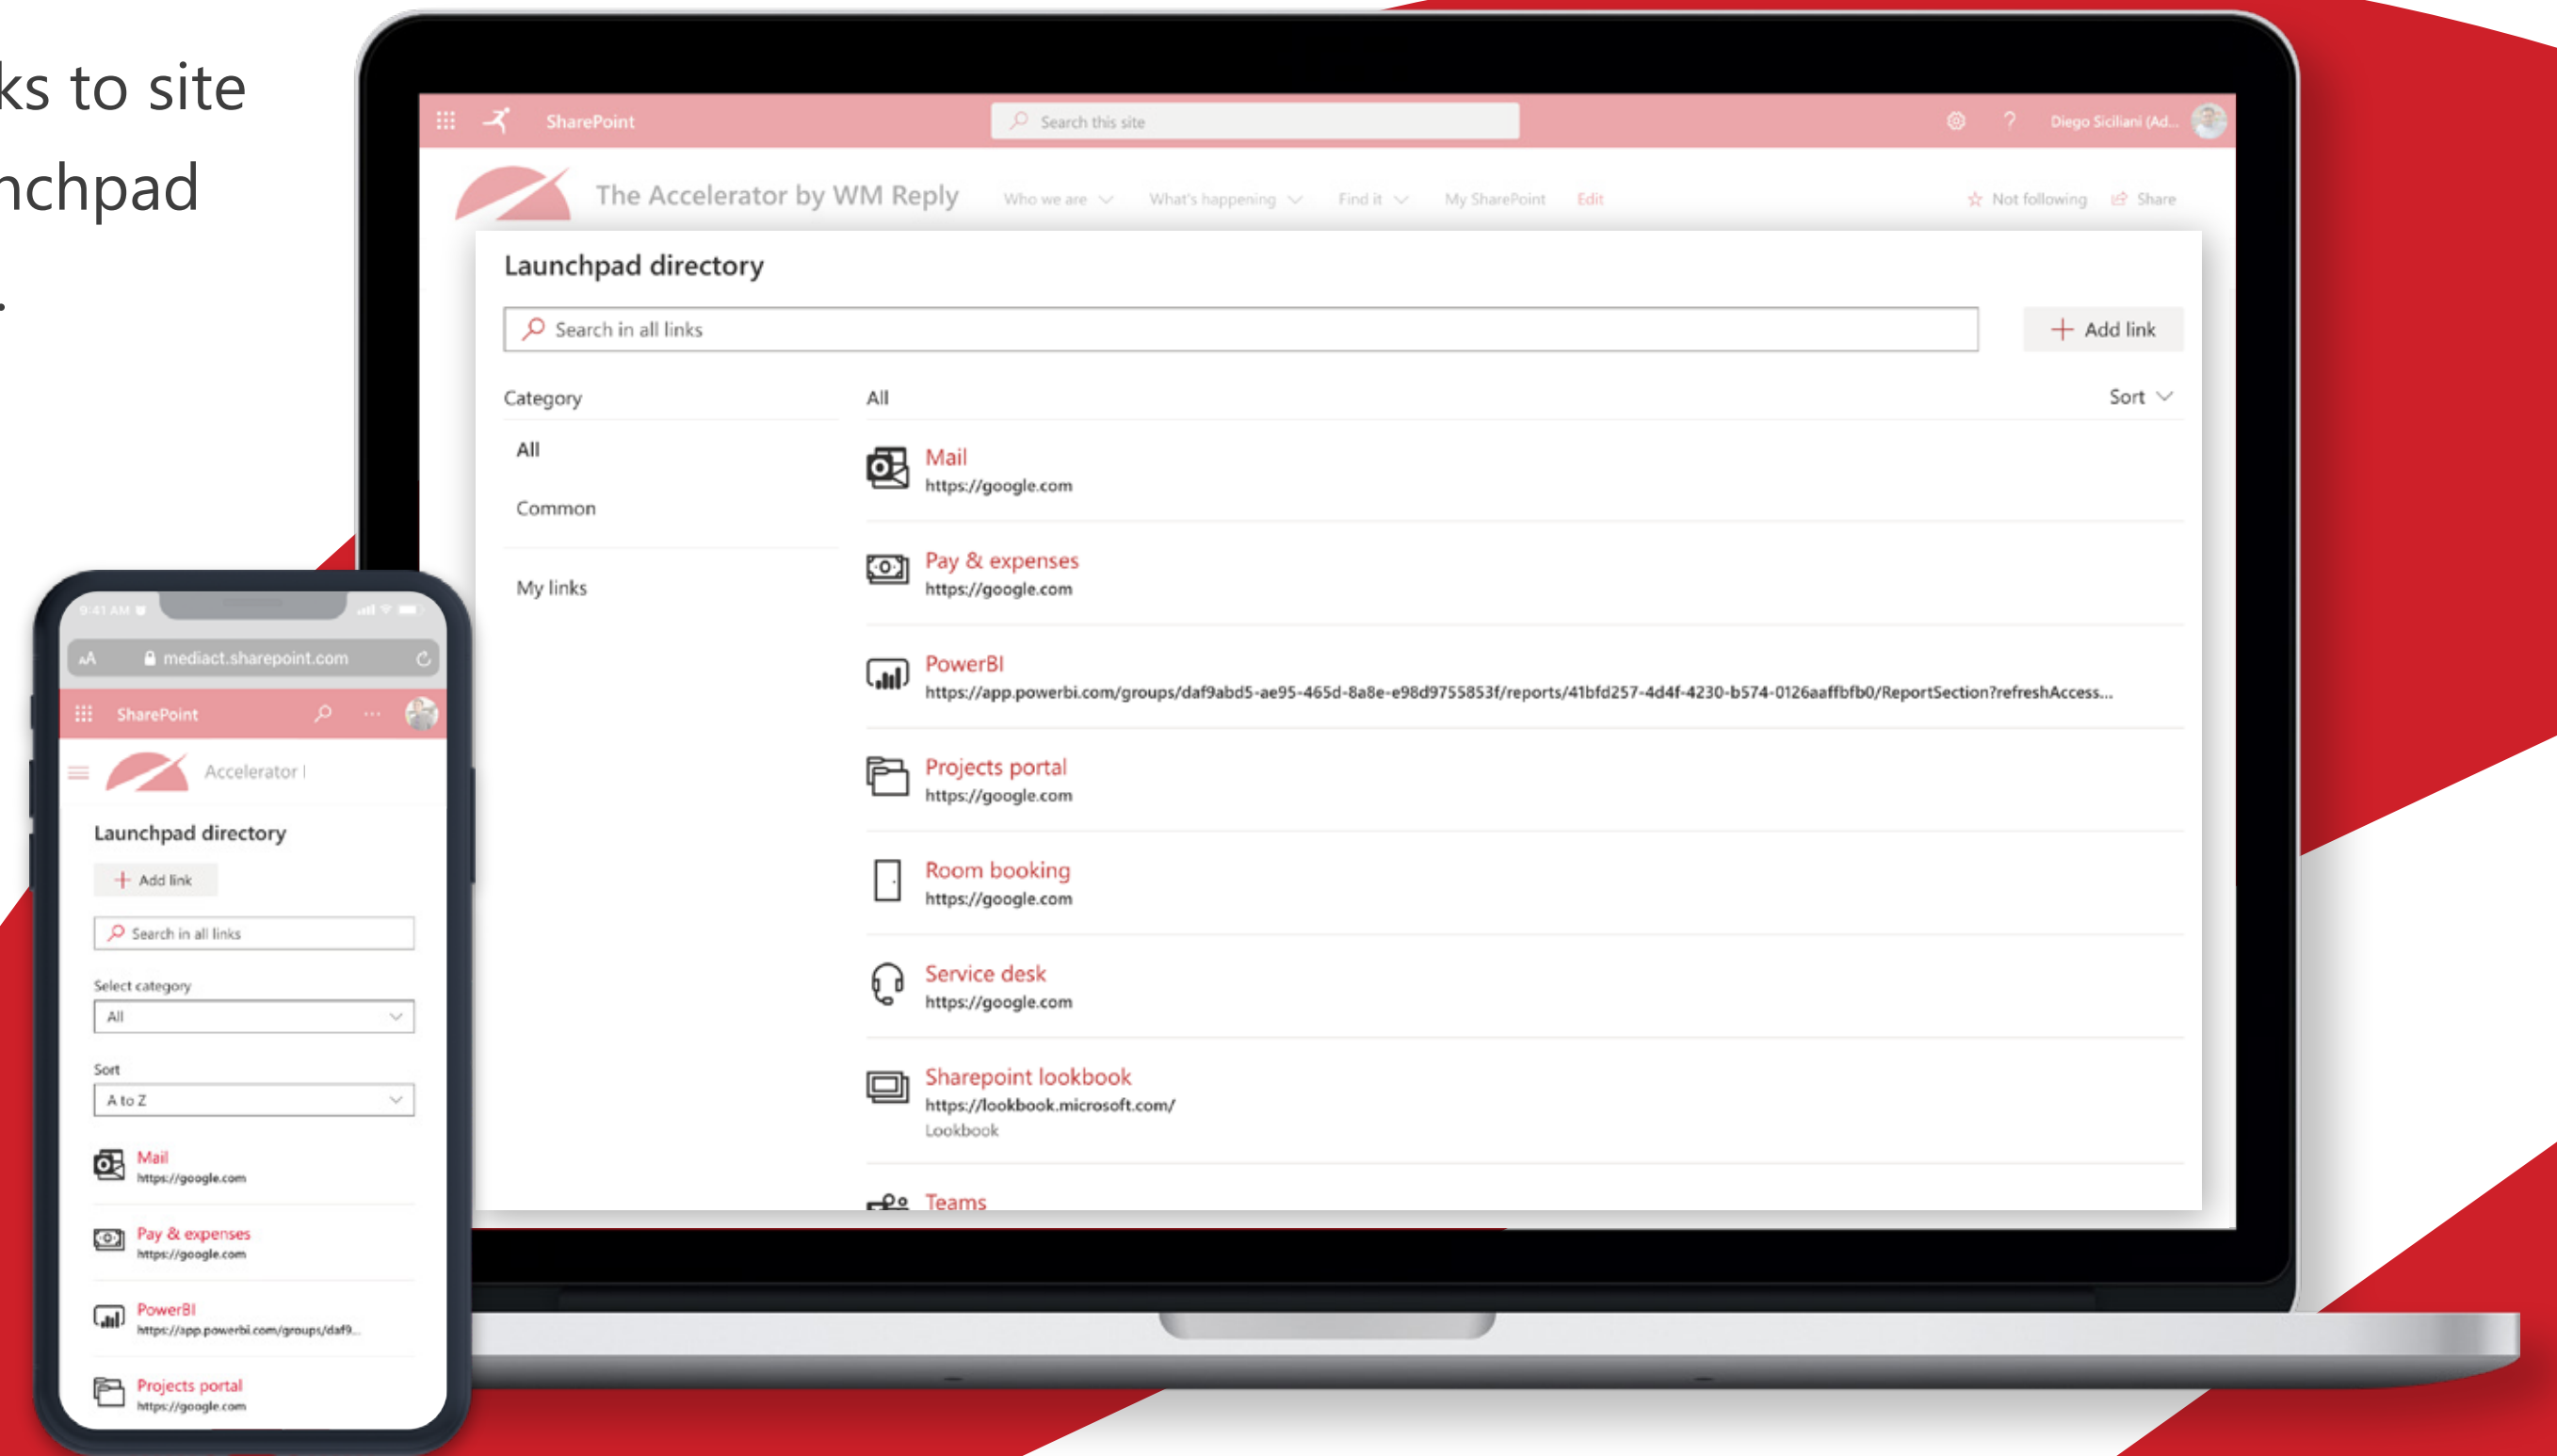

Launchpad Directory

Great for: intranets

The Launchpad Directory web part displays a curated list of links to site visitors and works alongside the Launchpad web part. The Launchpad directory ensures that all the links are available in one location.

Features

- Search all links and descriptions
- Filter links by category
- Fully responsive for mobile devices

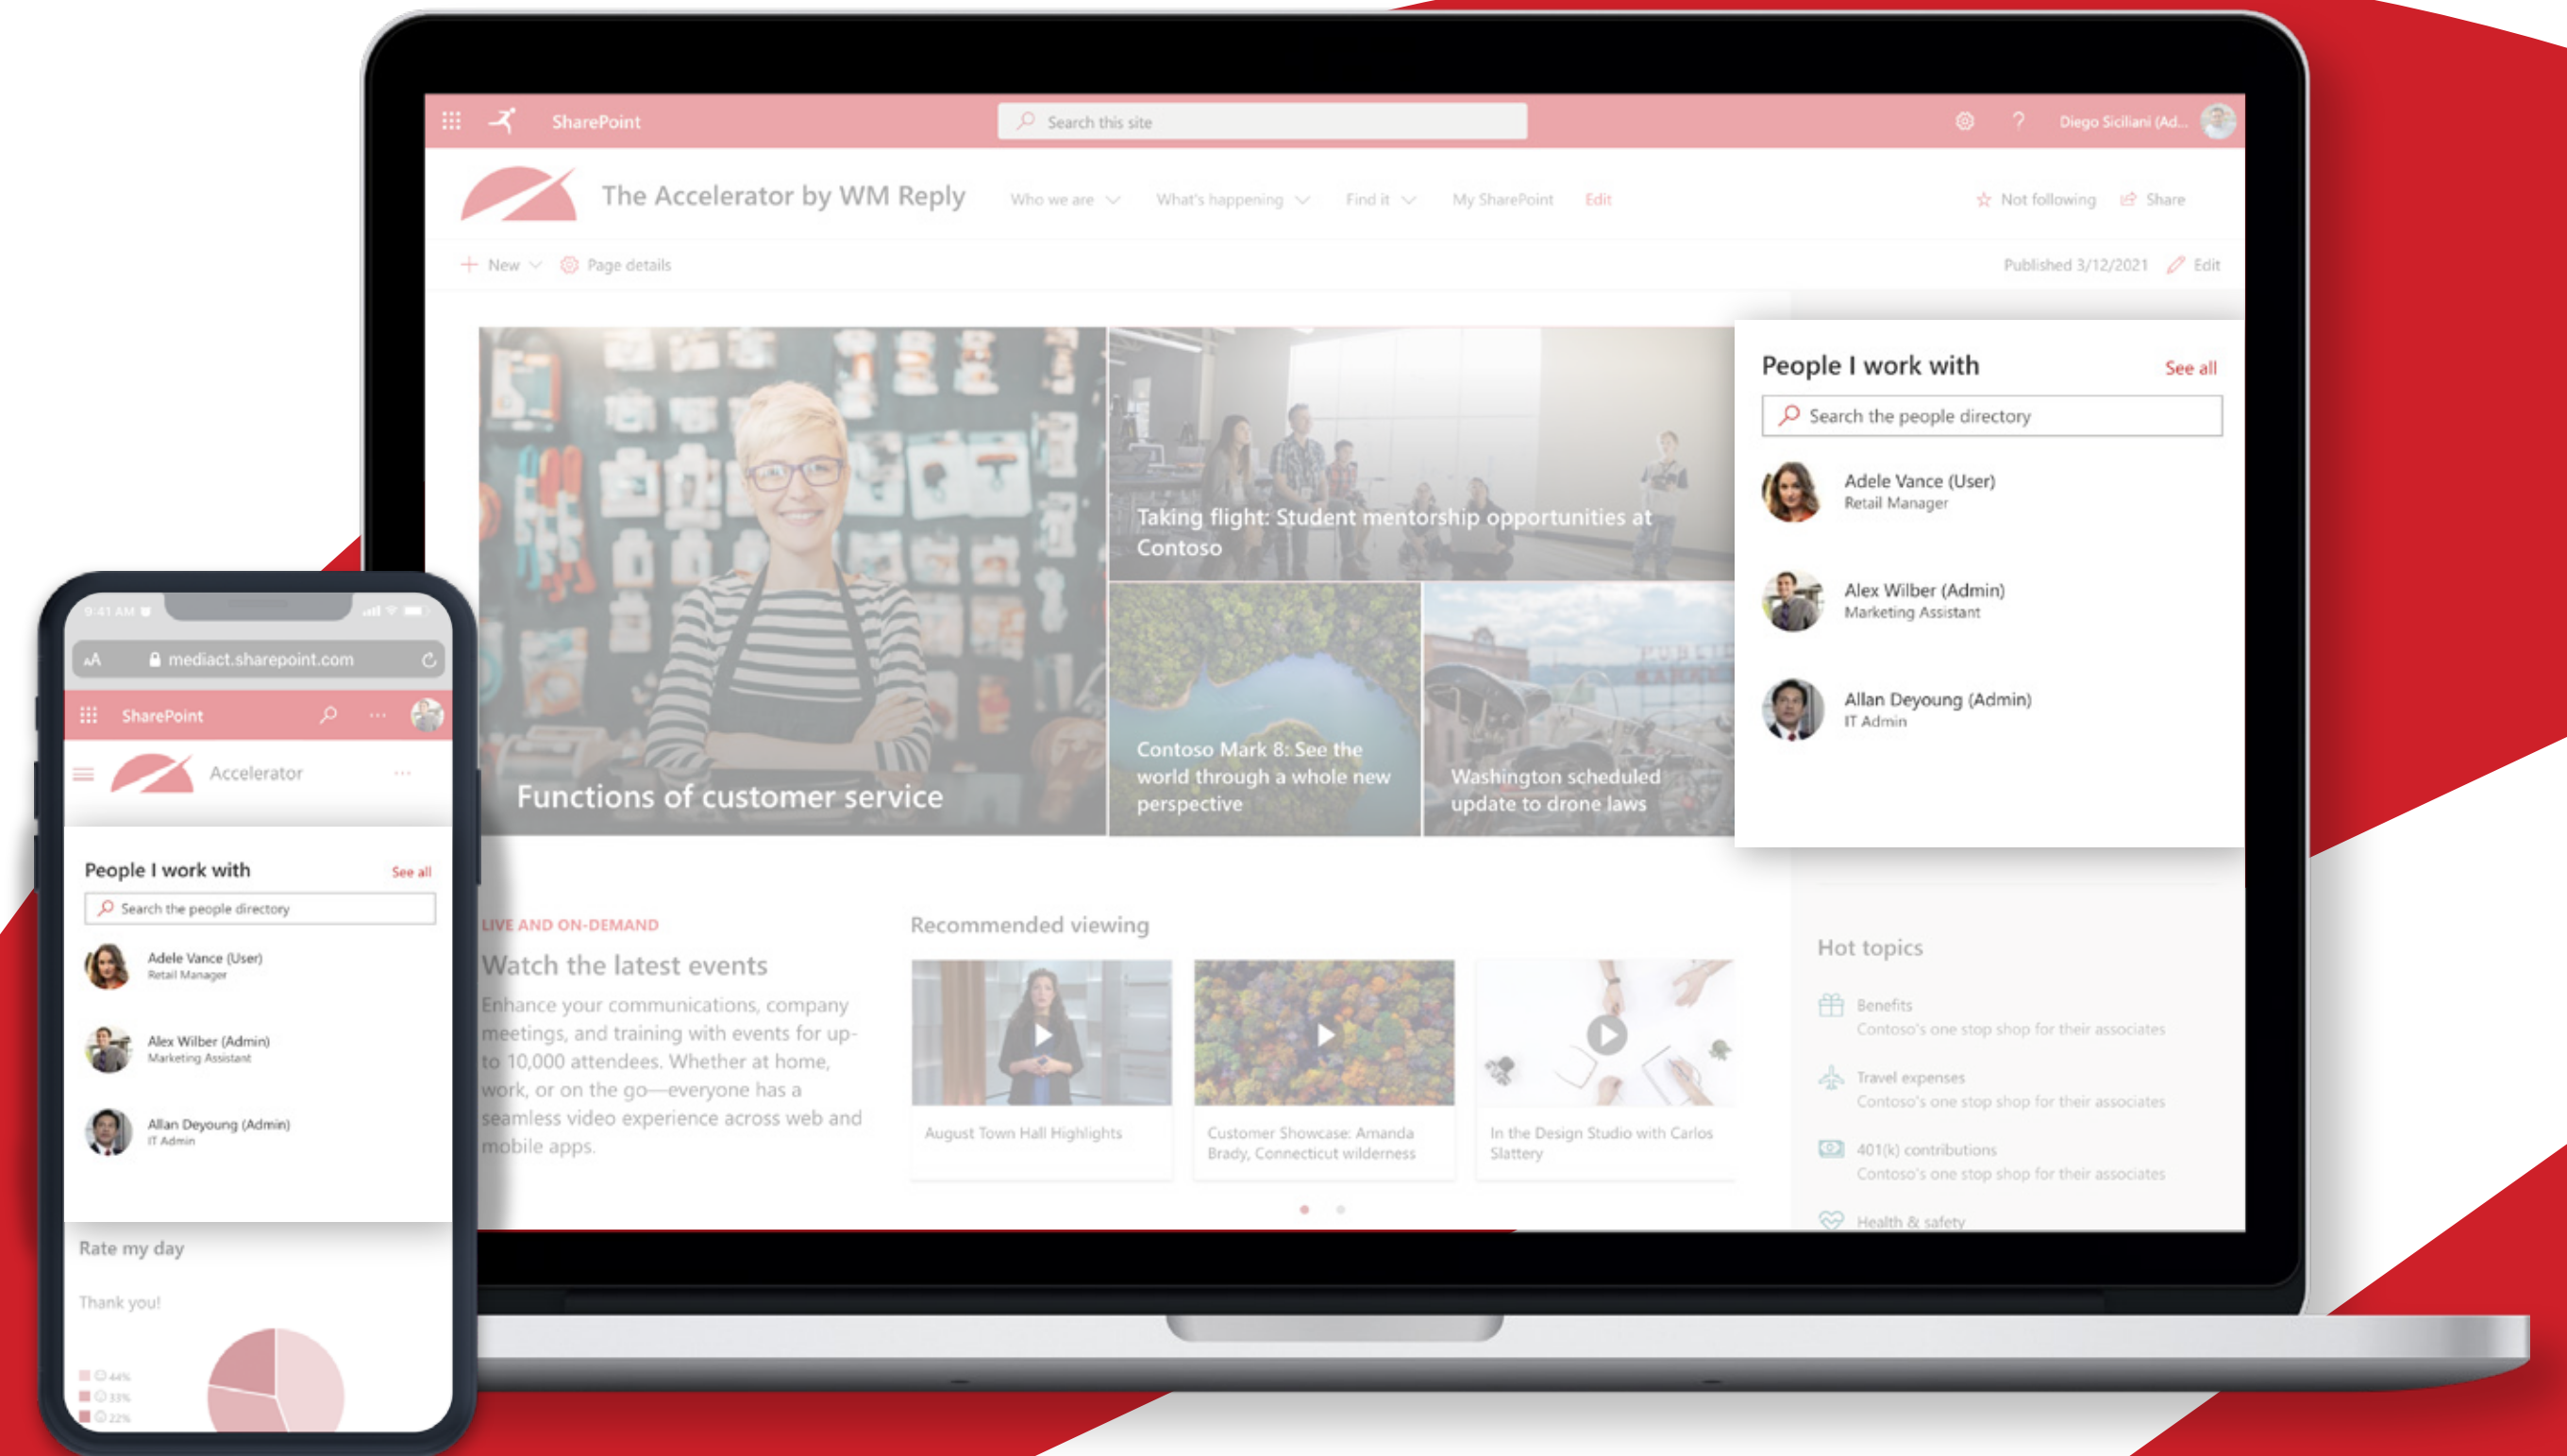

People Directory

Great for: intranet home pages, intranets

The People Directory web part surfaces user profile data from Office 365. The directory can be searched as well as display a list of recommended contacts driven by the Microsoft Graph.

Features

- Supports multiple display modes, including recommended contacts
- Surfaces data via SharePoint Search
- Additional queries can be configured, e.g. to restrict to a specific department
- Fully responsive for mobile devices

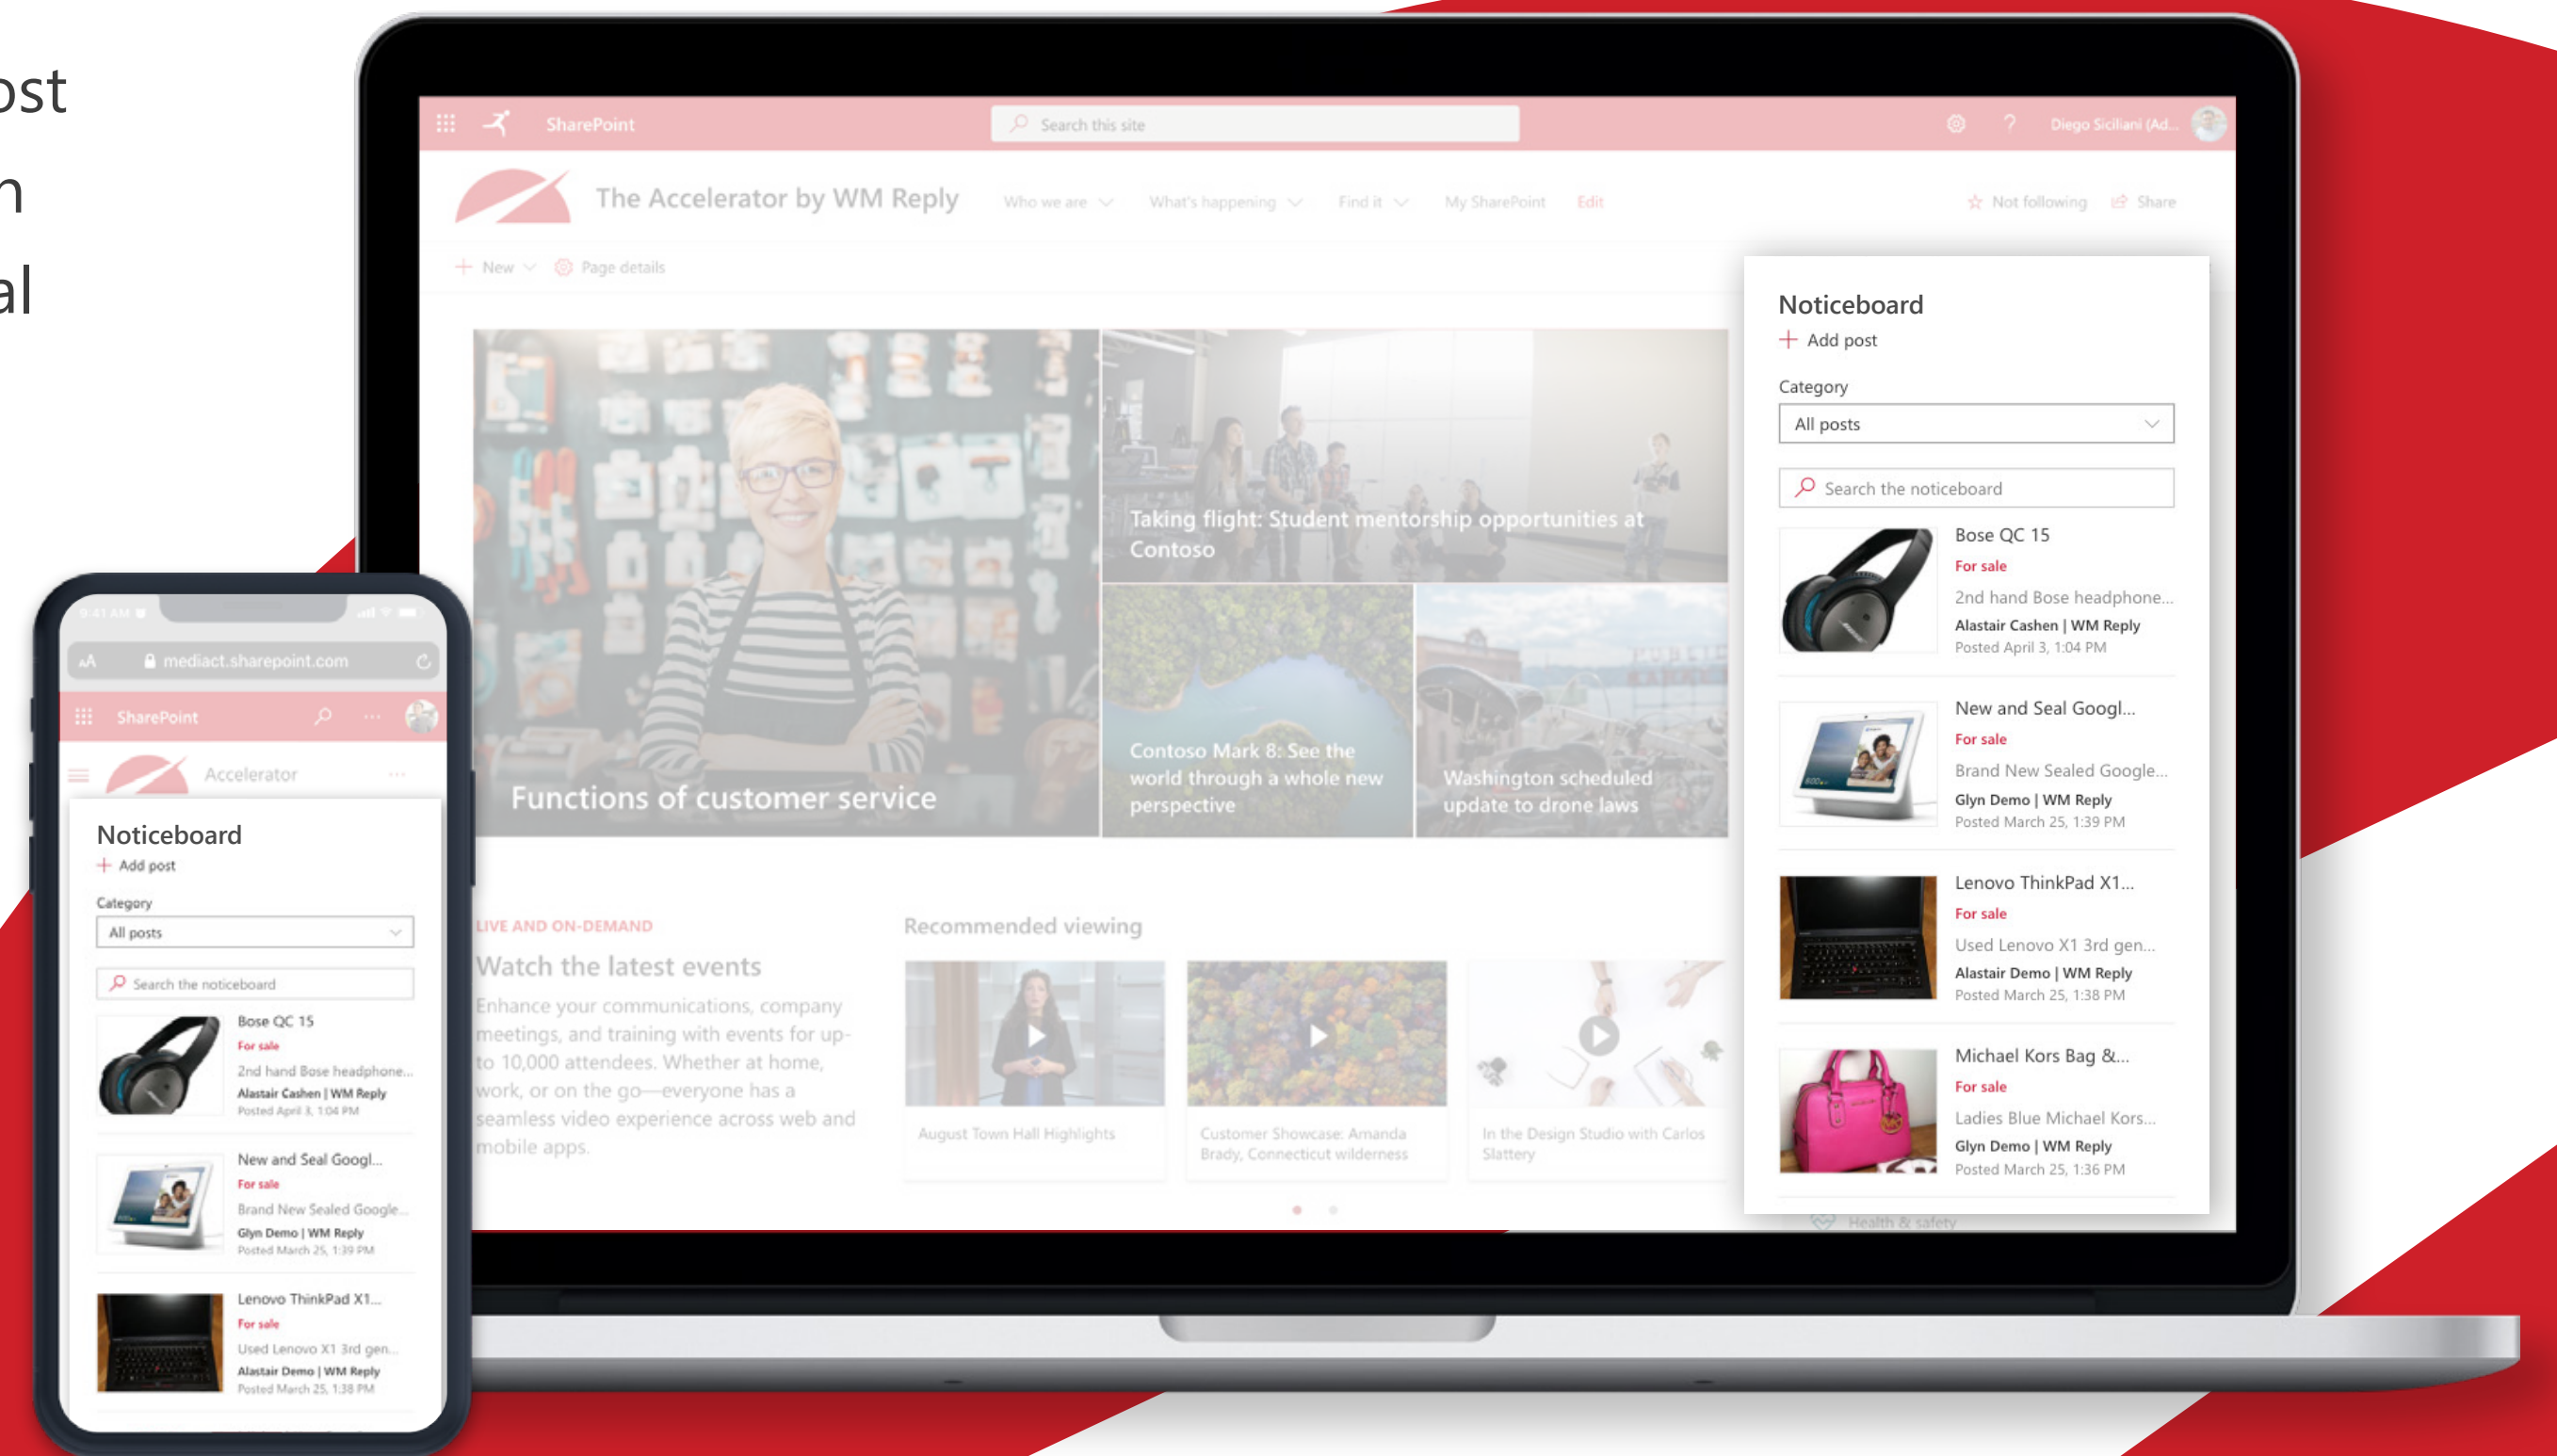

Noticeboard

Great for: intranets

The Noticeboard web part allows site visitors to browse and post to a noticeboard. This is deliberately a one-way communication channel (unlike Yammer or Teams). A common use is an internal 'for sale board'.

Features

- Search and categorisation supported
- Content managed fully within SharePoint
- Content approval can be enabled
- Fully responsive for mobile devices

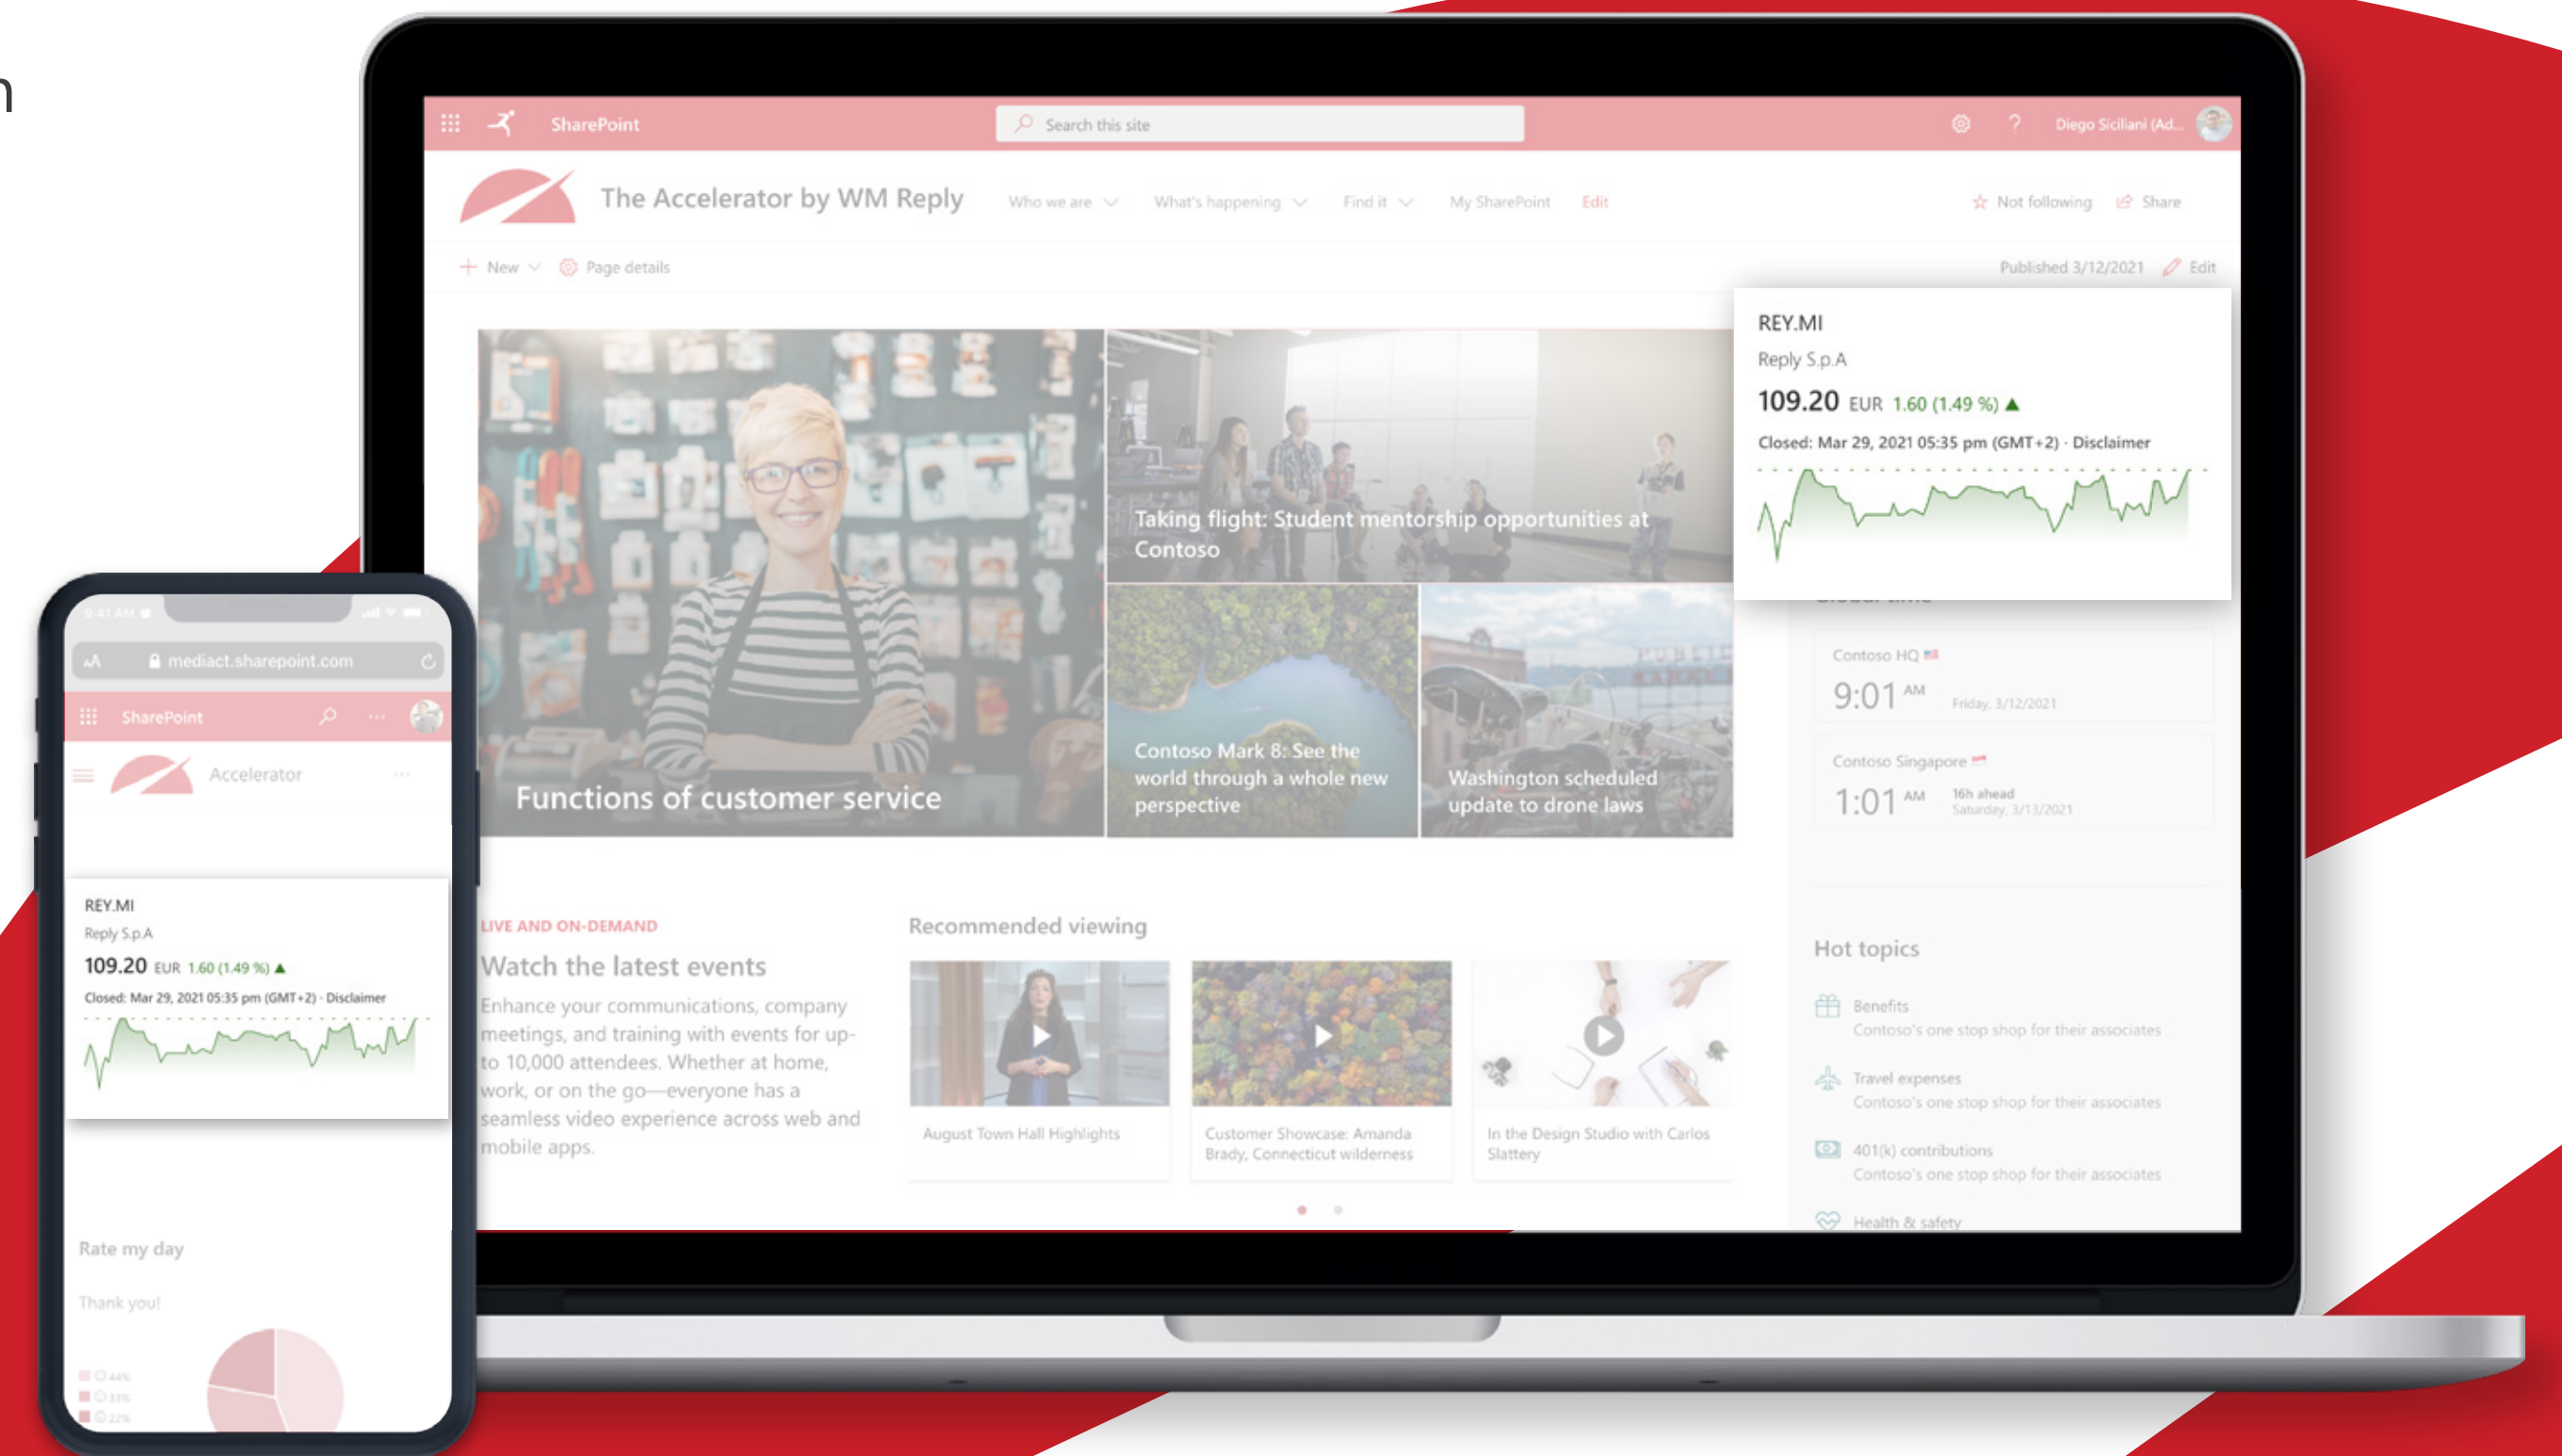

Share Price

Great for: intranet home pages, intranets

The Share Price web displays current and historical information for a chosen stock on a SharePoint page.

Features

- Search from thousands of stock codes across multiple exchanges
- Supports both a compact and a detailed display mode
- Fully responsive for mobile devices

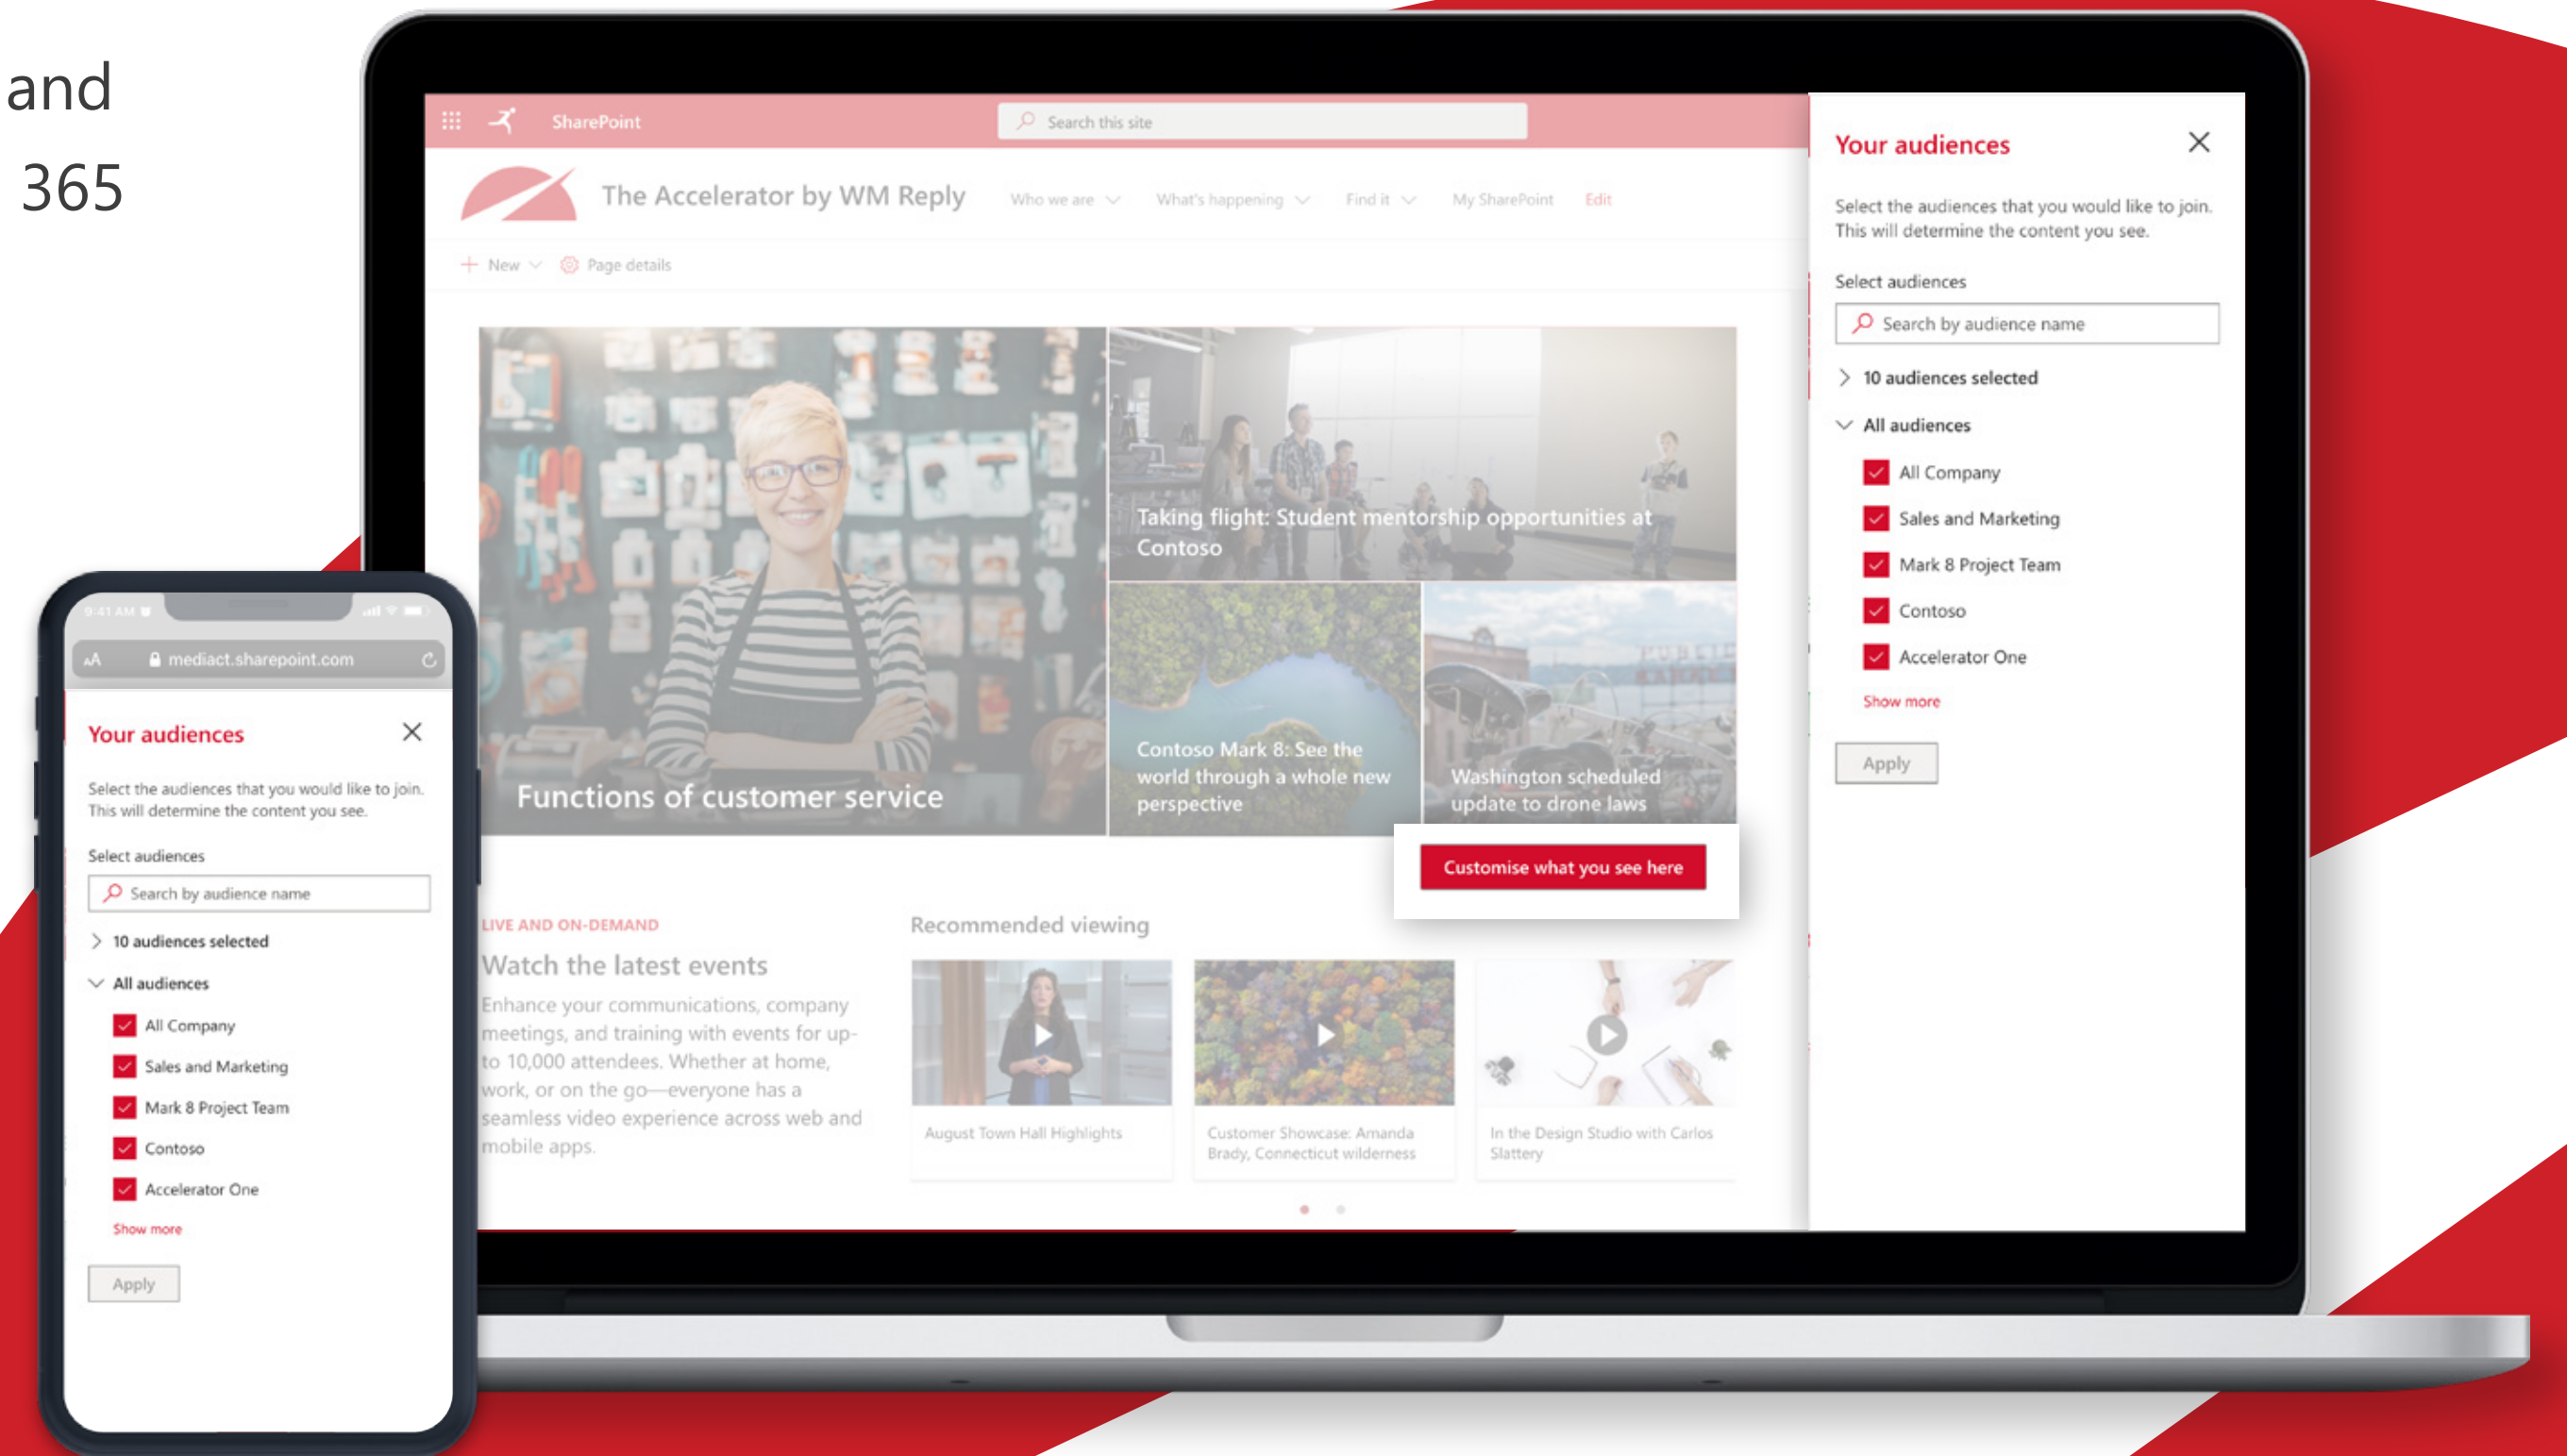

Audience Subscription

Great for: intranets, news

The Audience Subscription web part allows site visitors to add and remove themselves to a centrally managed set of public Office 365 groups. A common use is to combine this with the SharePoint audience targeting capability.

Features

- Administrators can select which groups are available
- Site visitors can add and remove themselves to selected groups
- Fully responsive for mobile devices

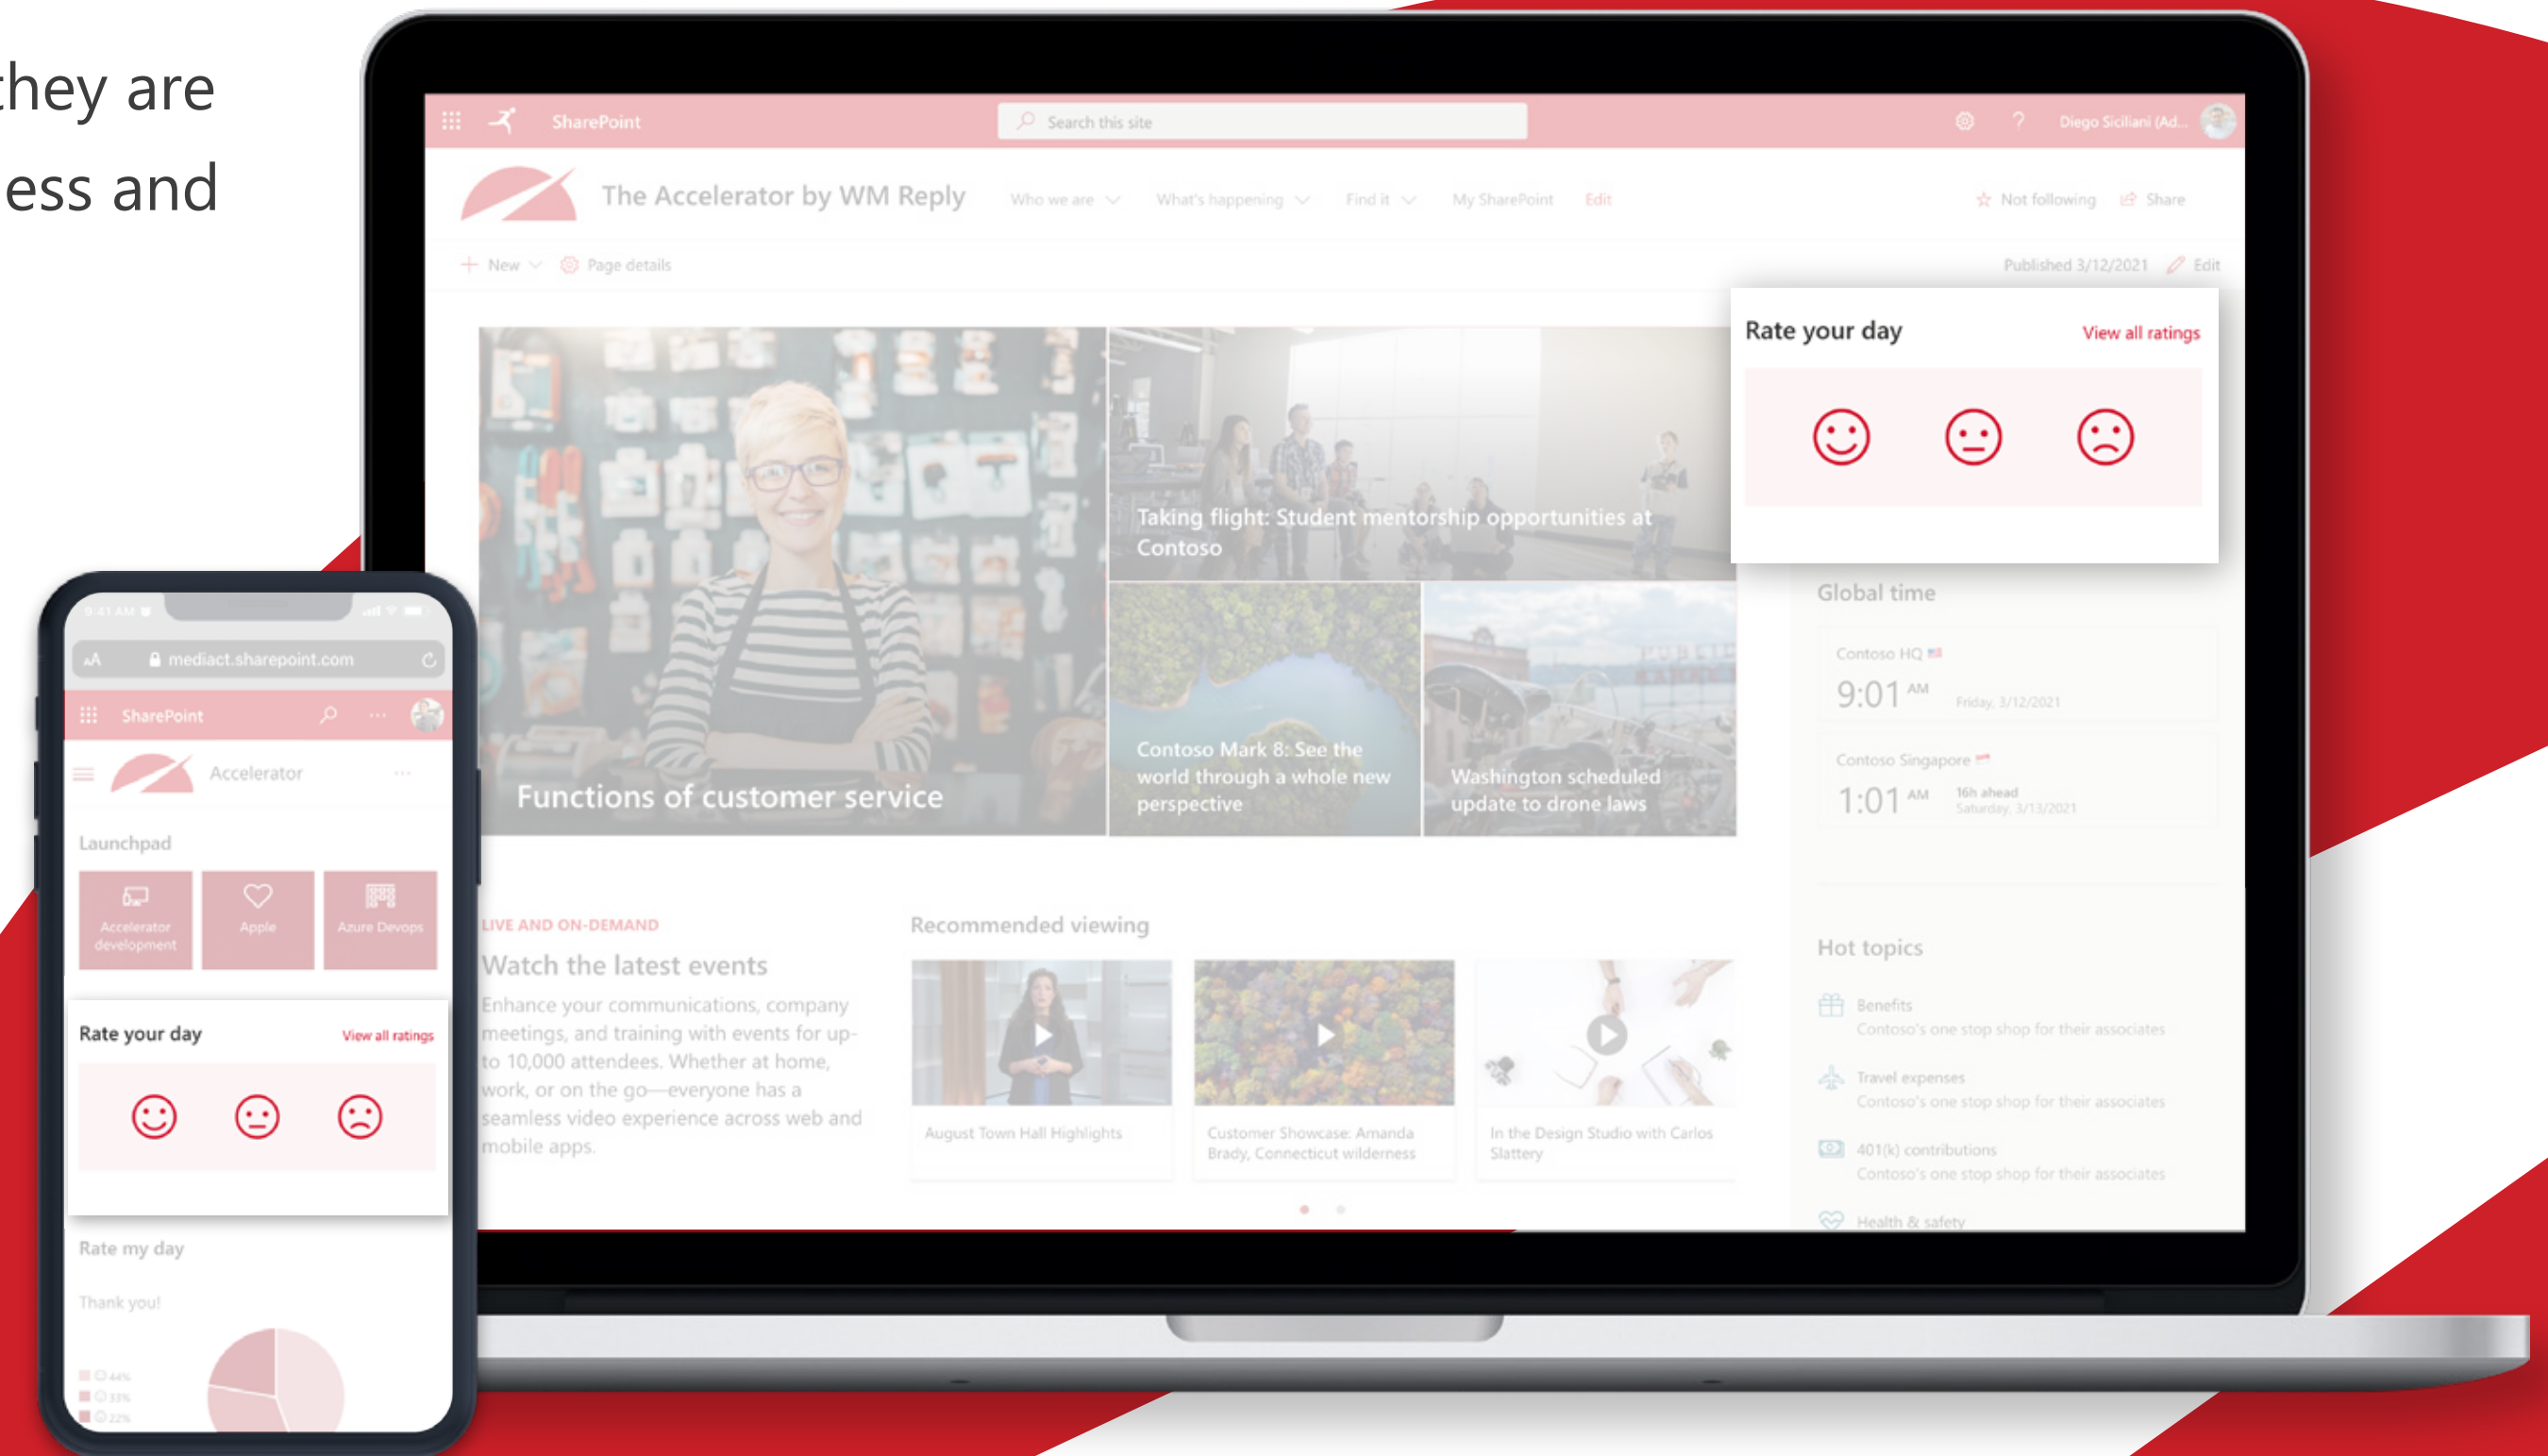

Rate My Day

Great for: intranets

The Rate My Day web part allows site visitors to indicate how they are currently feeling. This is a useful tool to help encourage openness and communication, often as part of a broader wellbeing initiative.

Features

- Configurable number of emotional states to display
- Graphical display of current and historical responses
- Optional feedback mechanism

Content Creation

Components that enable content authors to create compelling and appealing content.

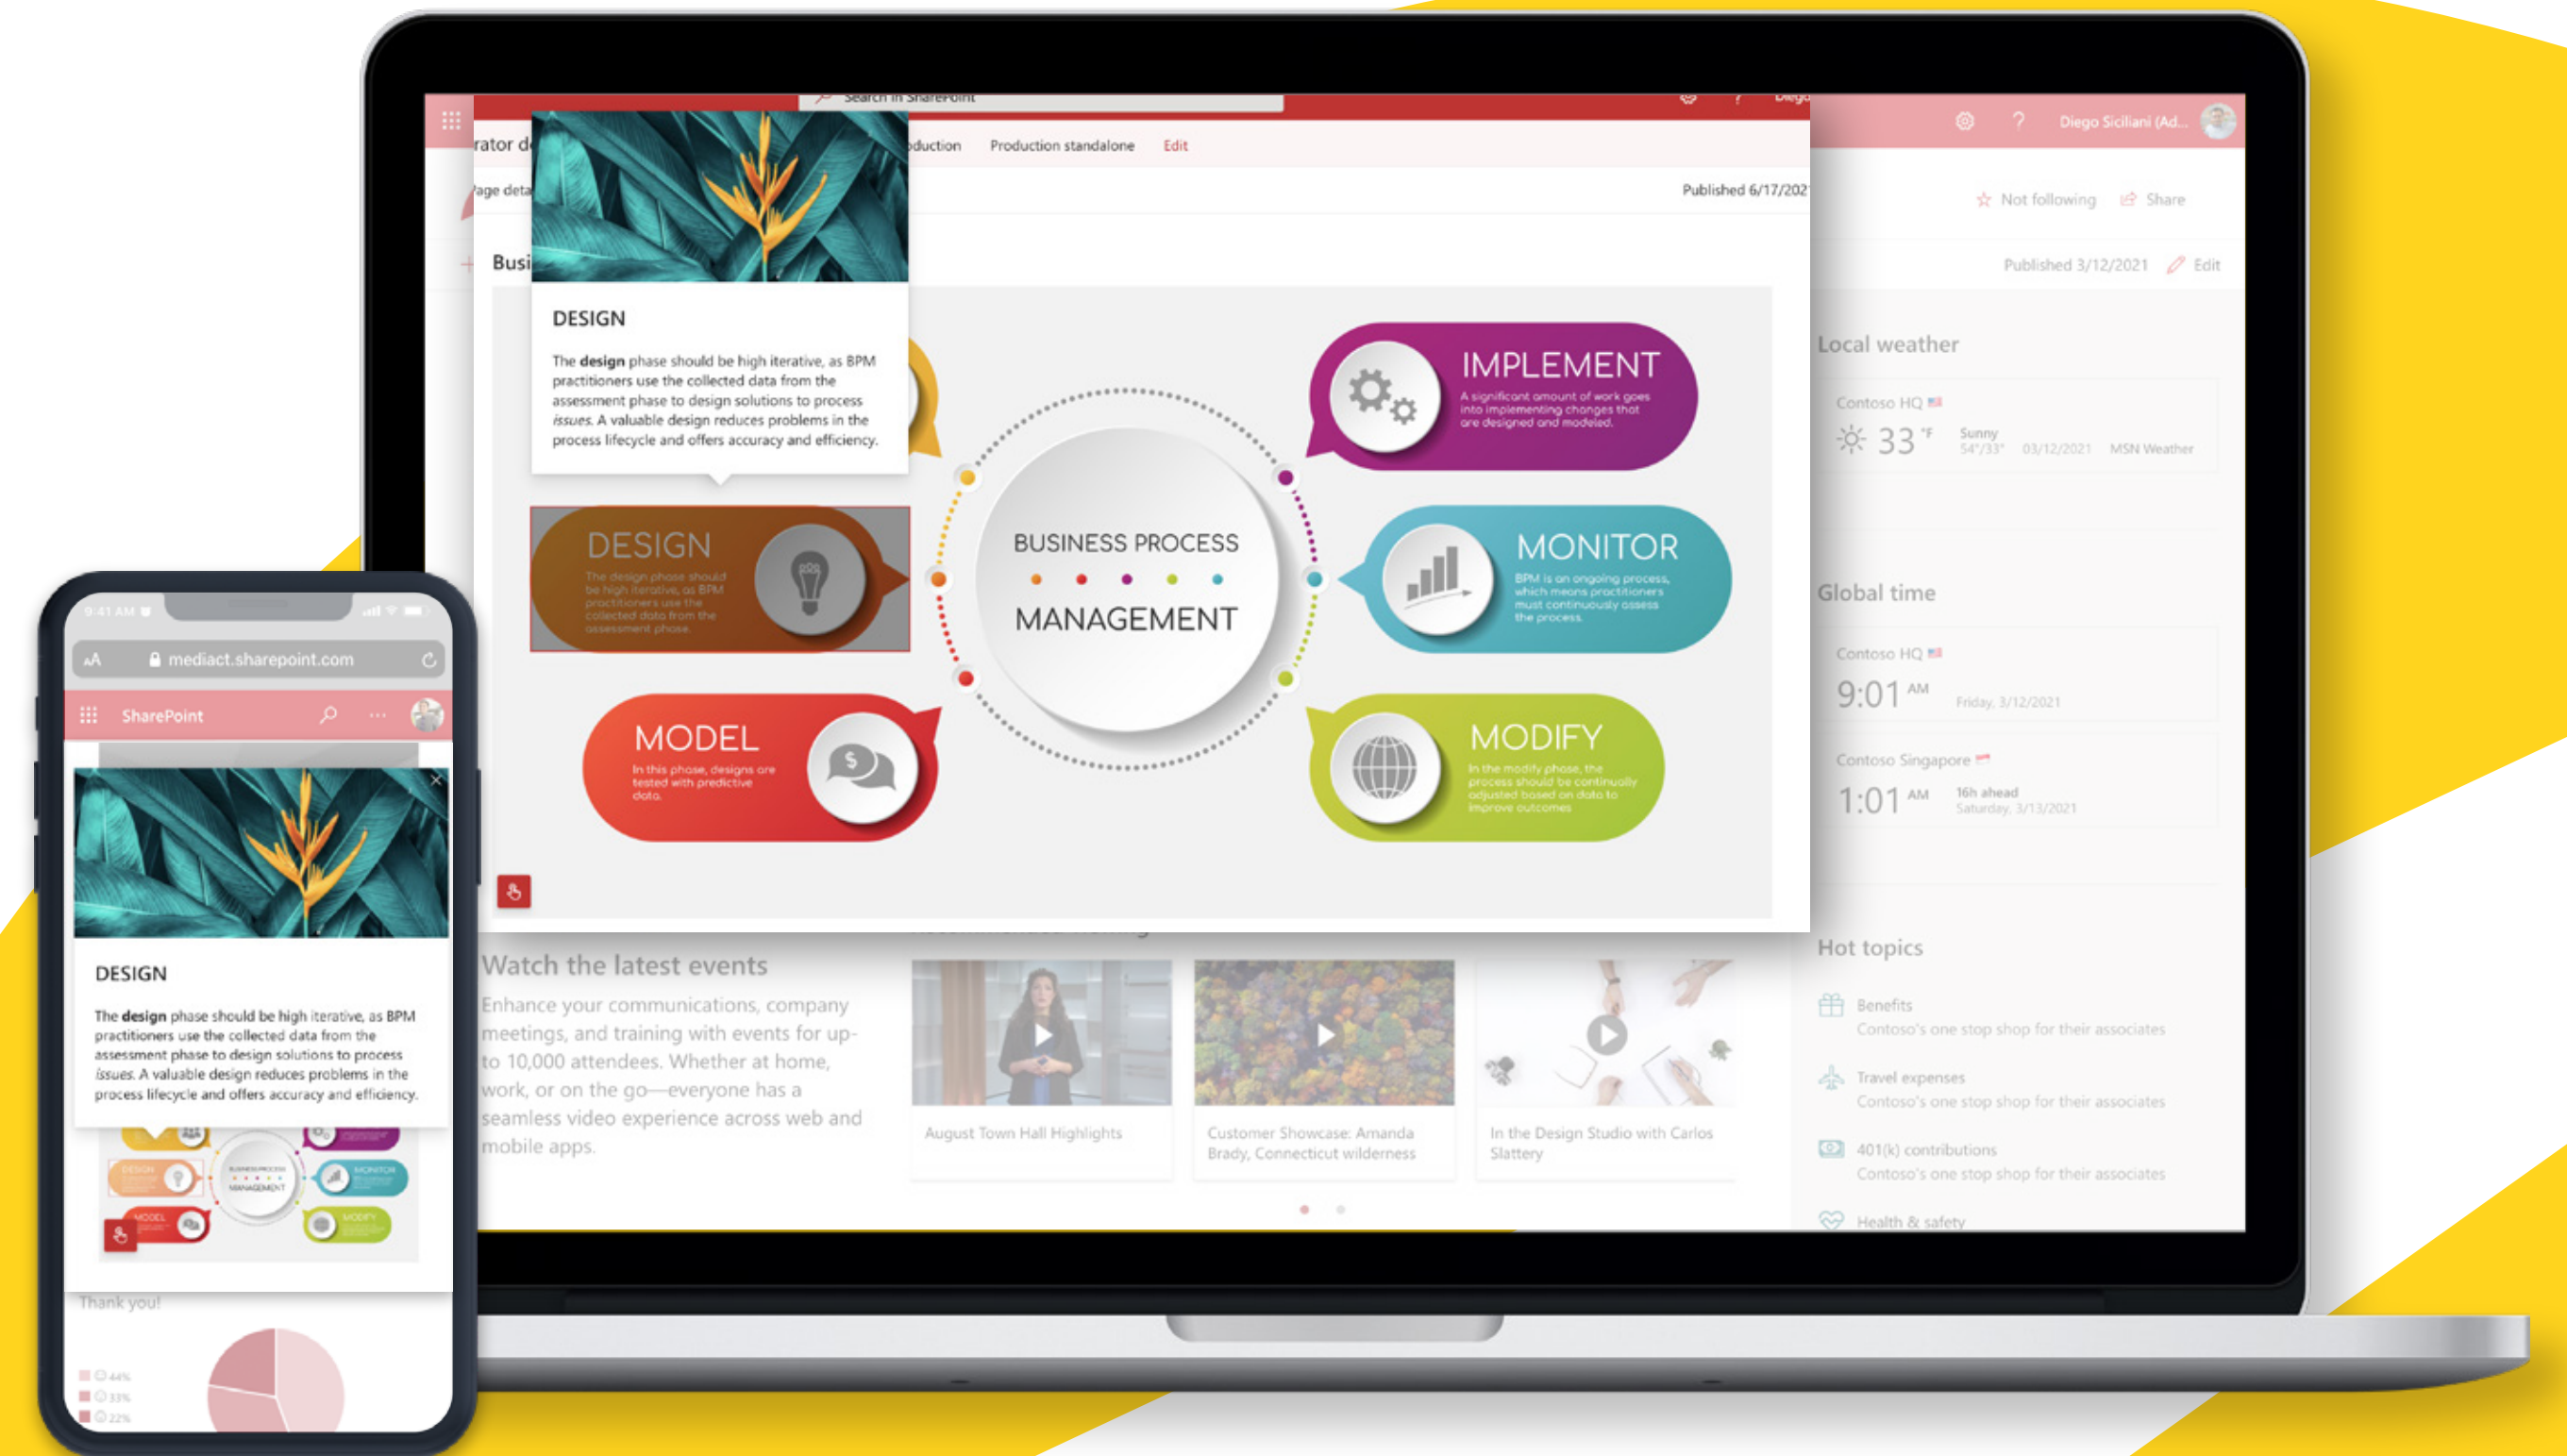

Image Map

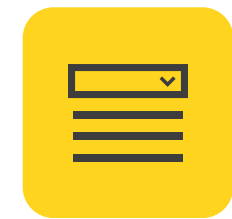

Great for: content pages

The Image Map web part enables content authors to add interactive images to a SharePoint page. Tooltips or links can be used to enhance previously static content.

Features

- Draw interactive areas in either rectangular, circular or irregular polygon shapes
- Clone areas for complex images
- Fully responsive for mobile devices

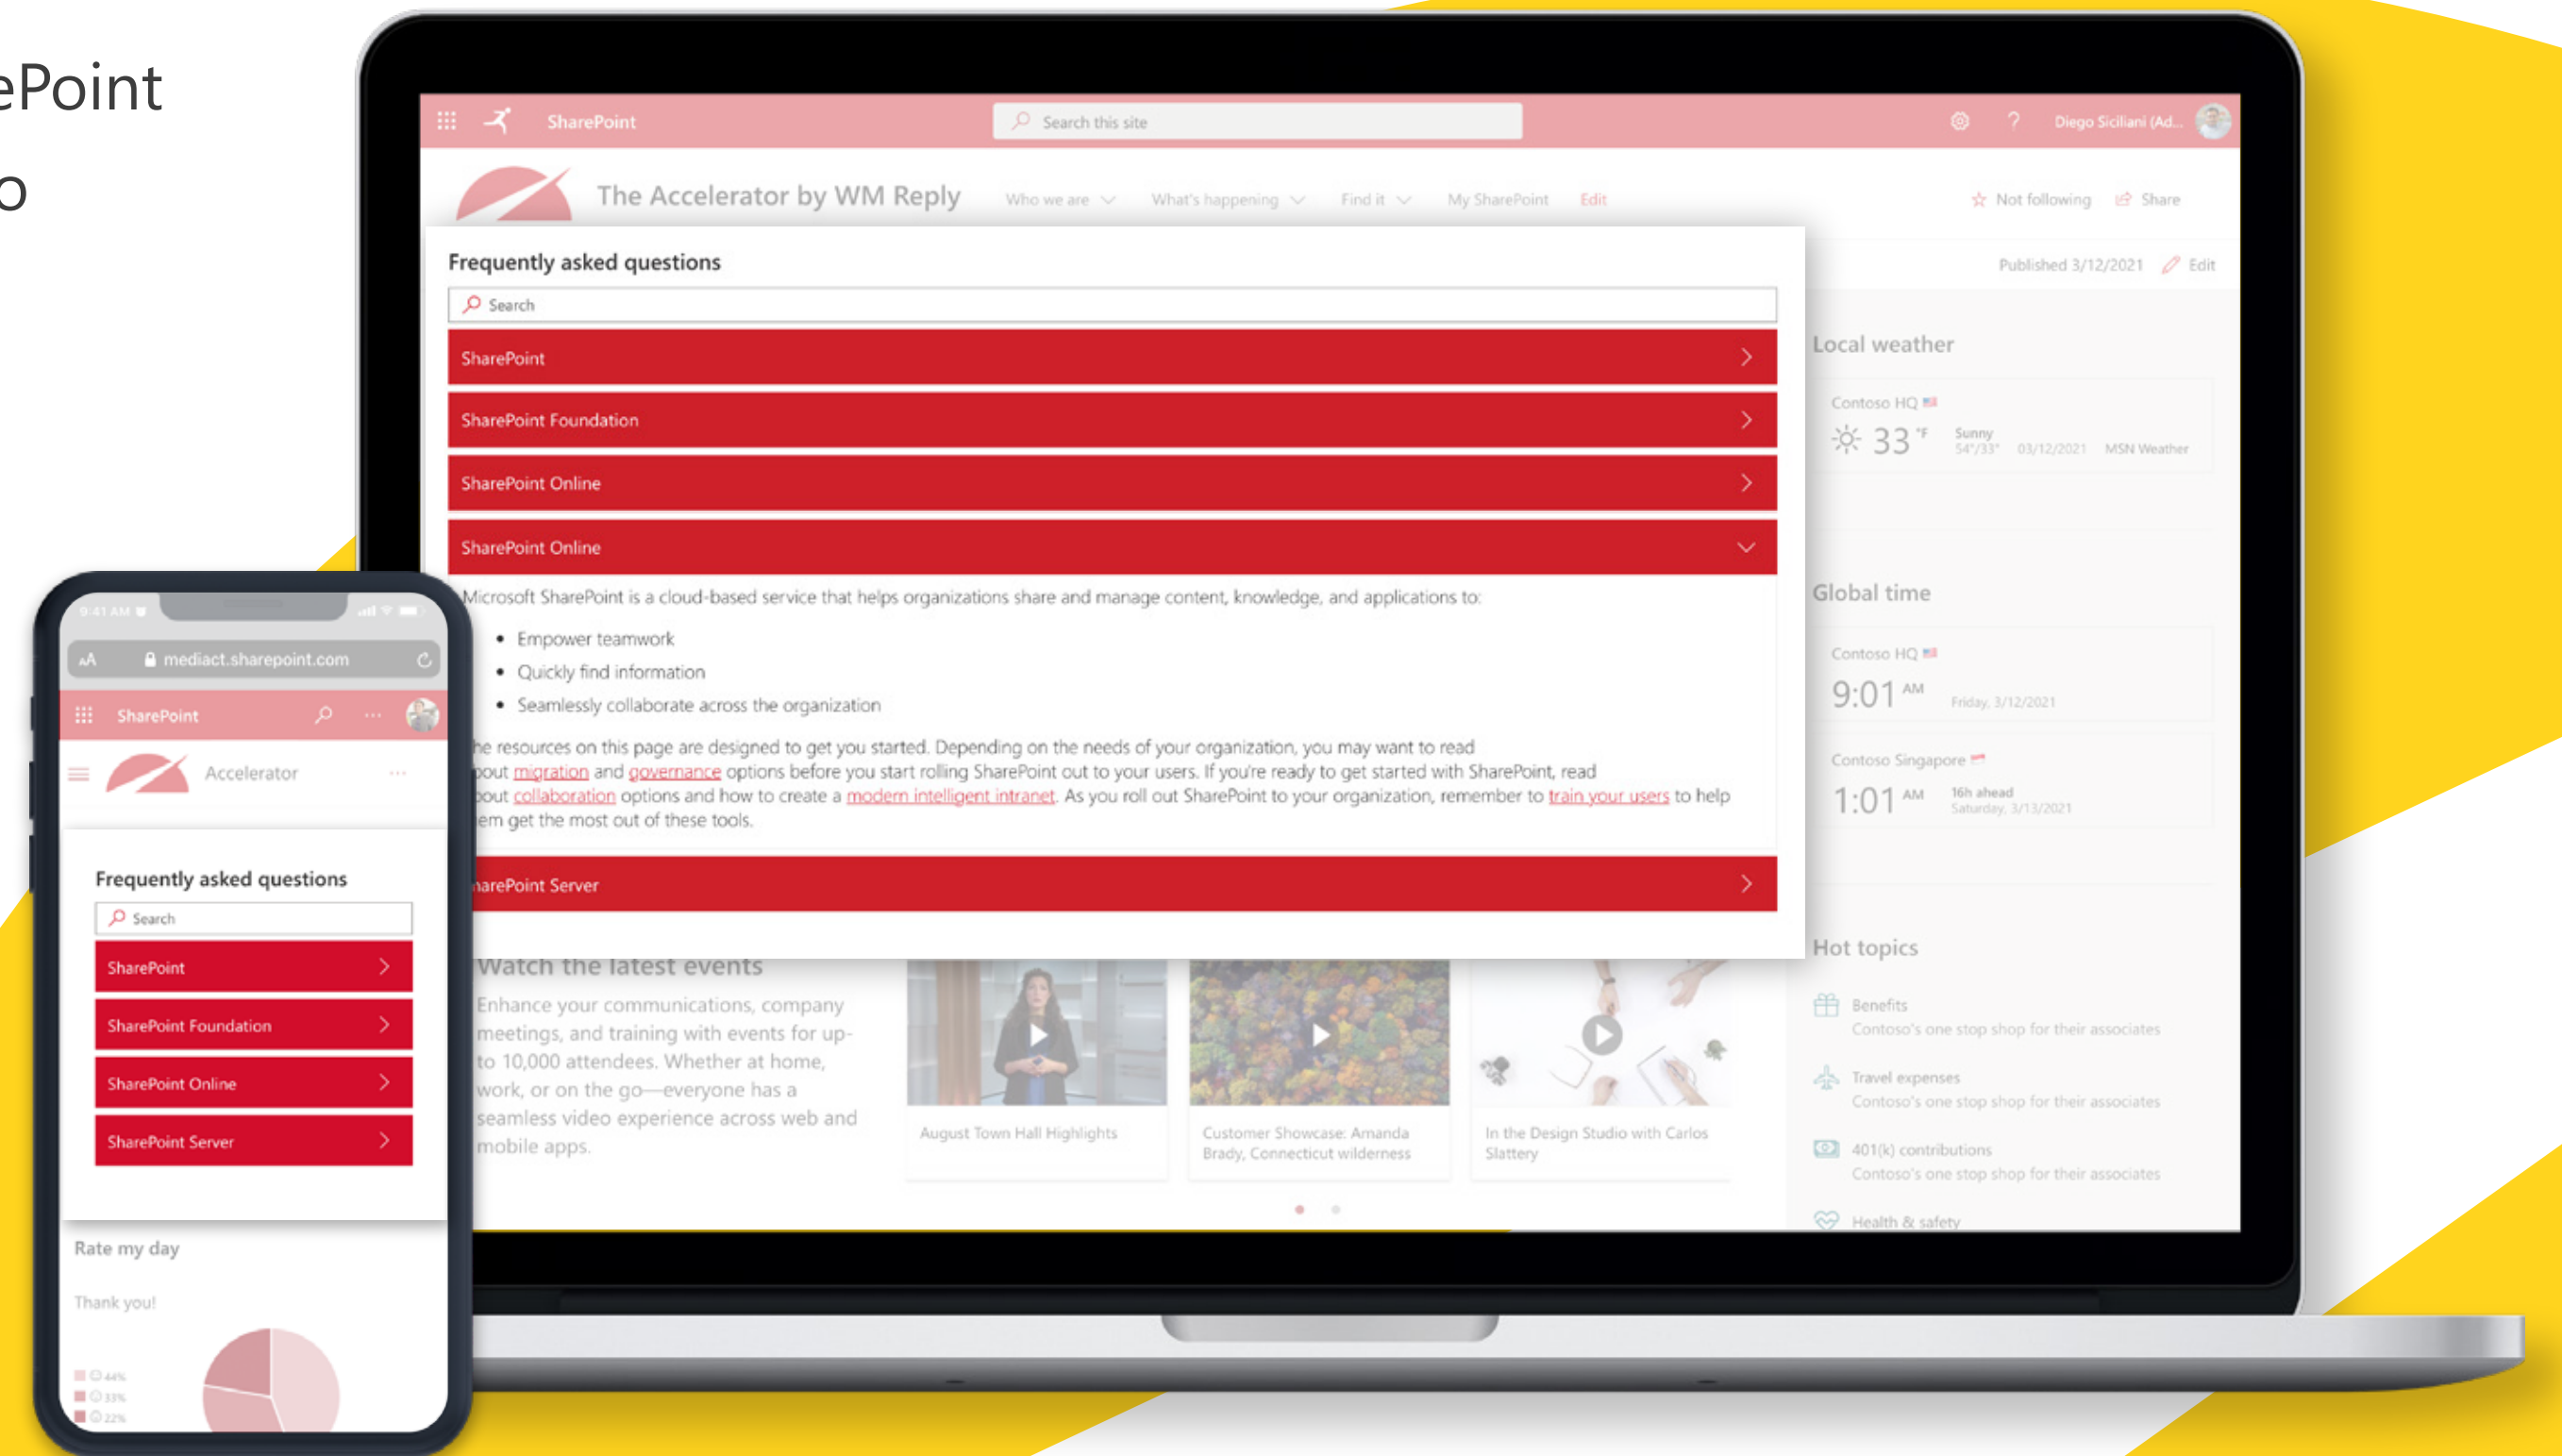

Accordion

Great for: frequently asked questions

The Accordion web part allows rich text to be added to a SharePoint page in expanding and collapsing sections. A common use is to display frequently asked questions.

Features

- Optionally enable a search feature
- Set a default section to open on page load
- Re-order sections with an intuitive drag and drop interface
- Fully responsive for mobile devices

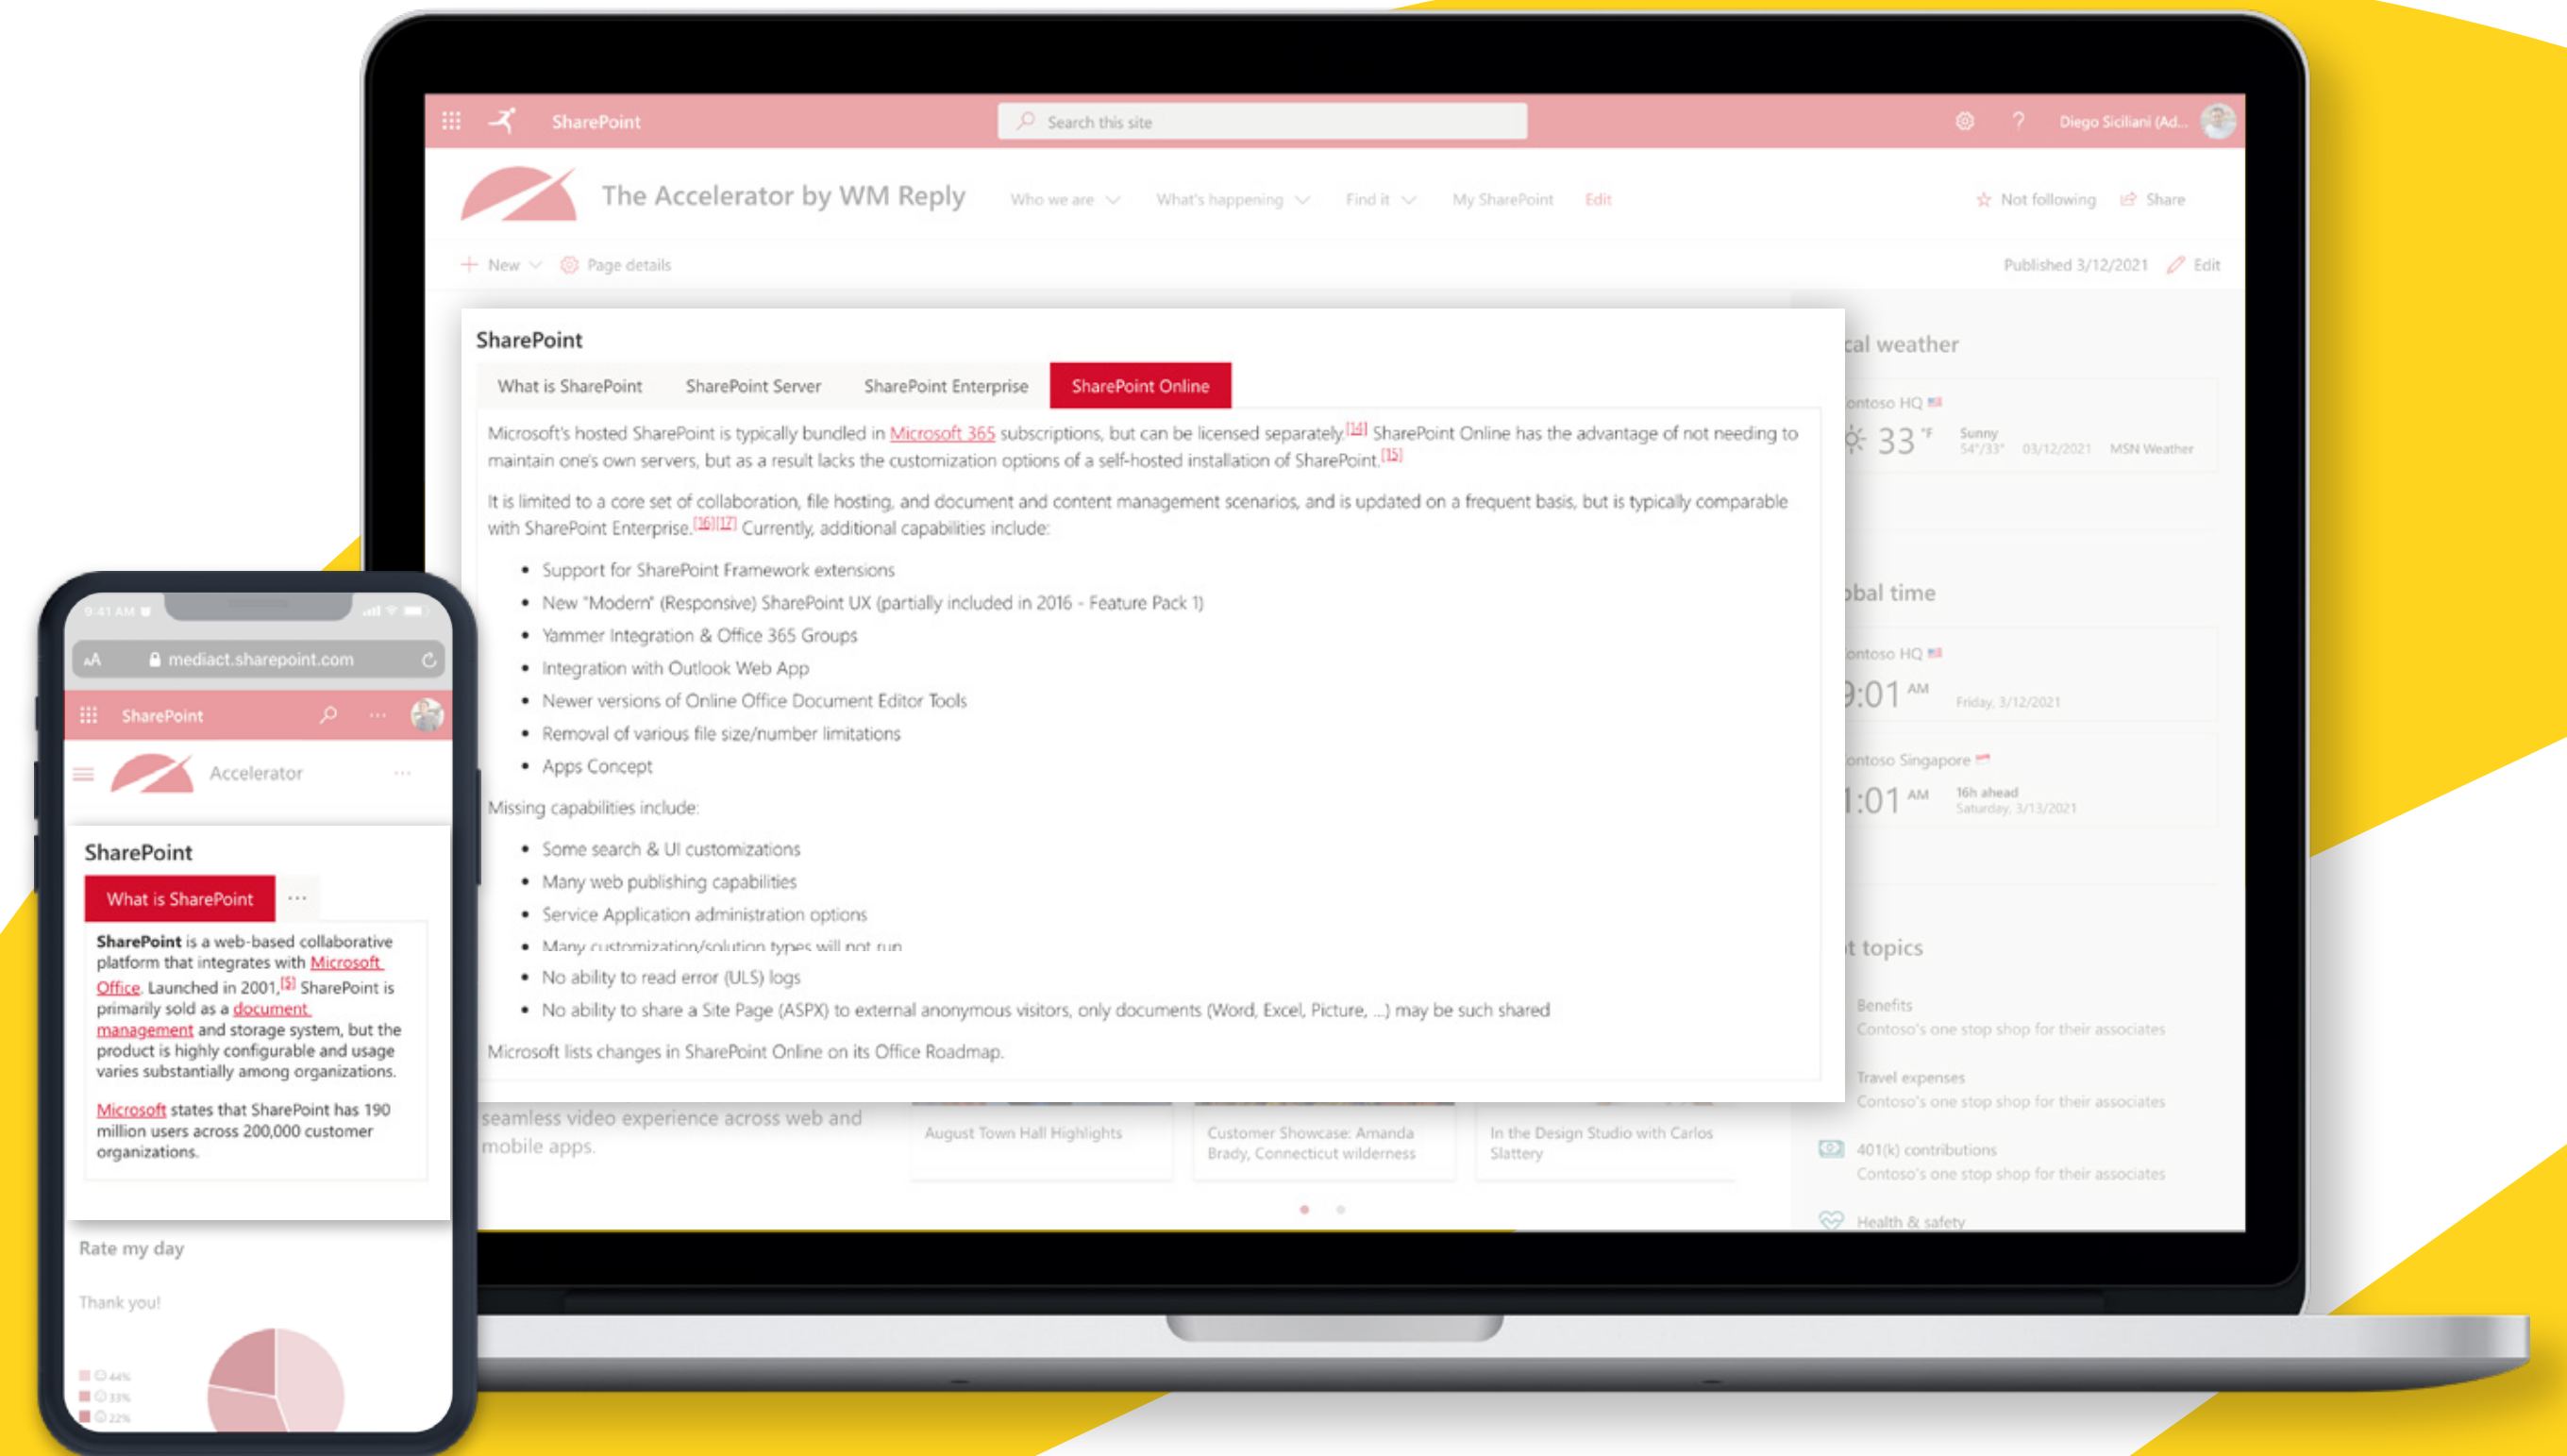

Tabs

Great for: process documentation

The Tabs web part allows content authors to arrange rich text into a tabbed layout on a SharePoint page. A common use is to walk site visitors through different steps in a process.

Features

- Re-order tabs with an intuitive drag and drop interface
- Set a default tab to open on page load
- Fully responsive for mobile devices

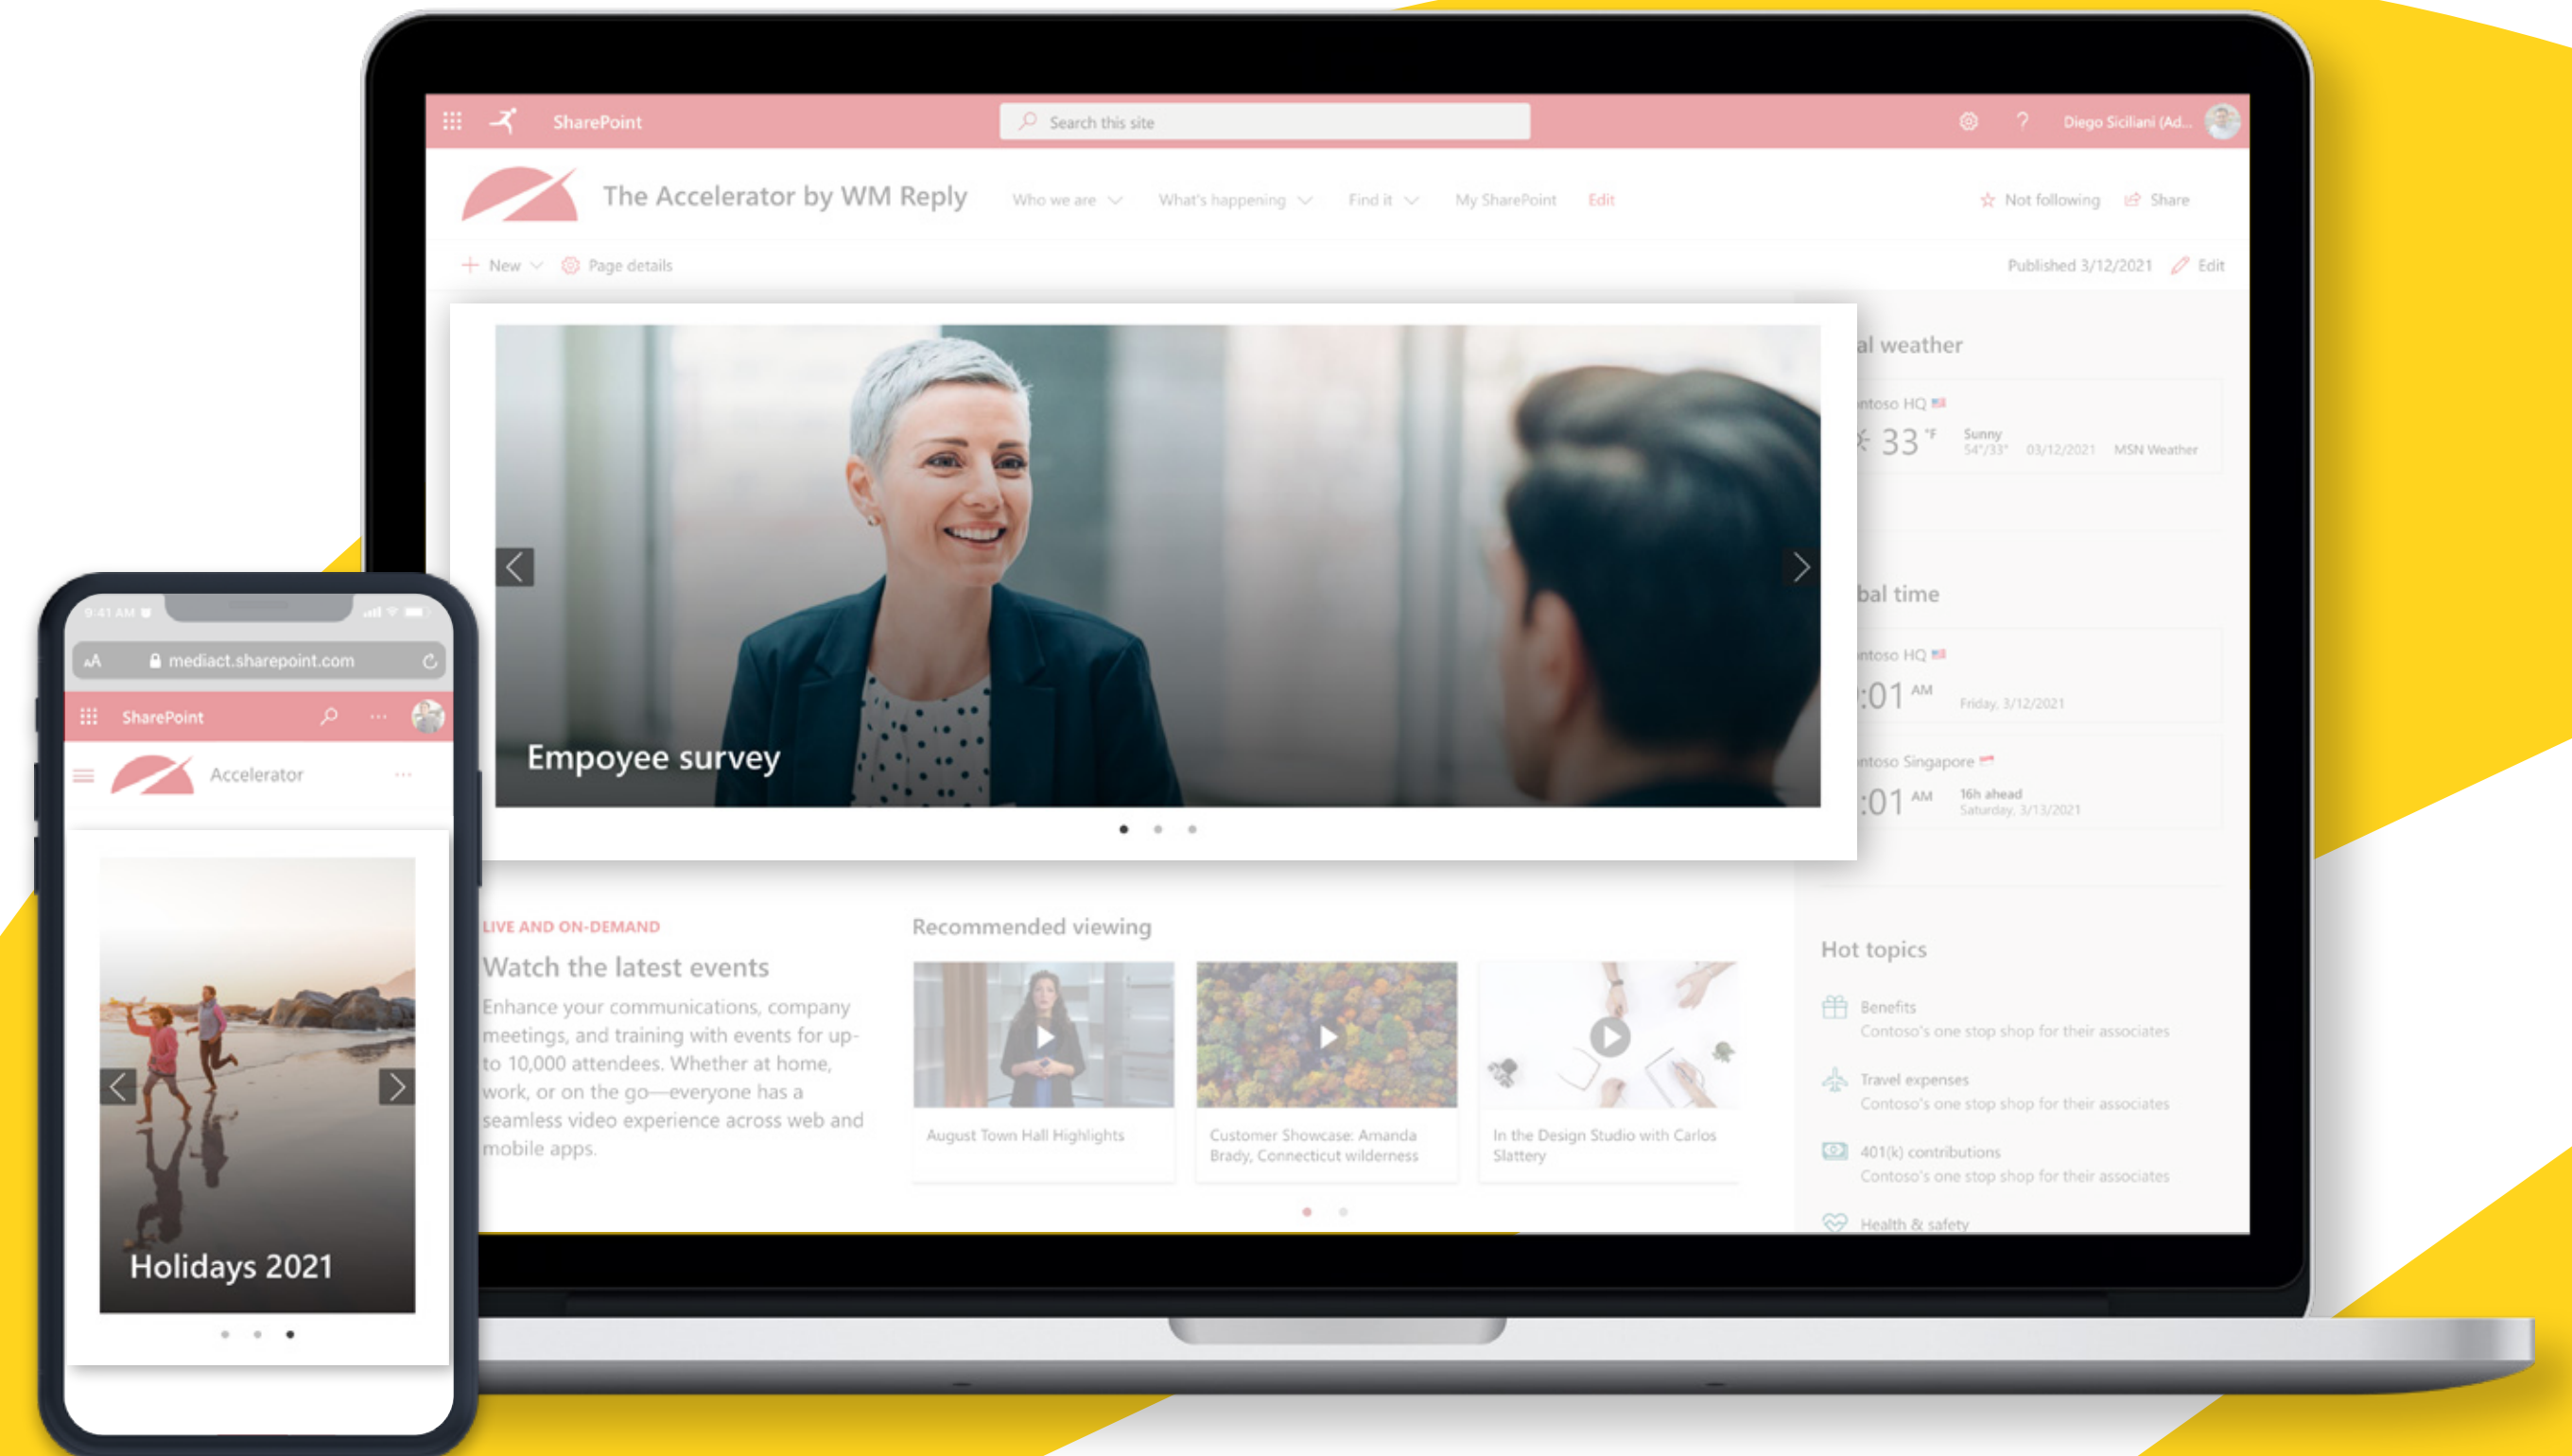

Carousel

Great for: landing pages

The Carousel web part displays multiple calls to action (image, title and link) in a single area of a SharePoint page. Content can automatically move between multiple slides.

Features:

- Enable automatic transition between slides
- Re-order slides with an intuitive drag and drop interface
- Fully responsive for mobile devices

Spotlight

Great for: landing pages

The Spotlight web part displays a call to action (image, title, description and link) that can be dismissed by individual users once it has been read. Typical use cases are to draw attention on individual communication campaigns.

Features

- Multiple layout options available
- The ability to dismiss the Spotlight can be turned on / off as needed
- Dismissals are retained across devices for users
- Fully responsive for mobile devices

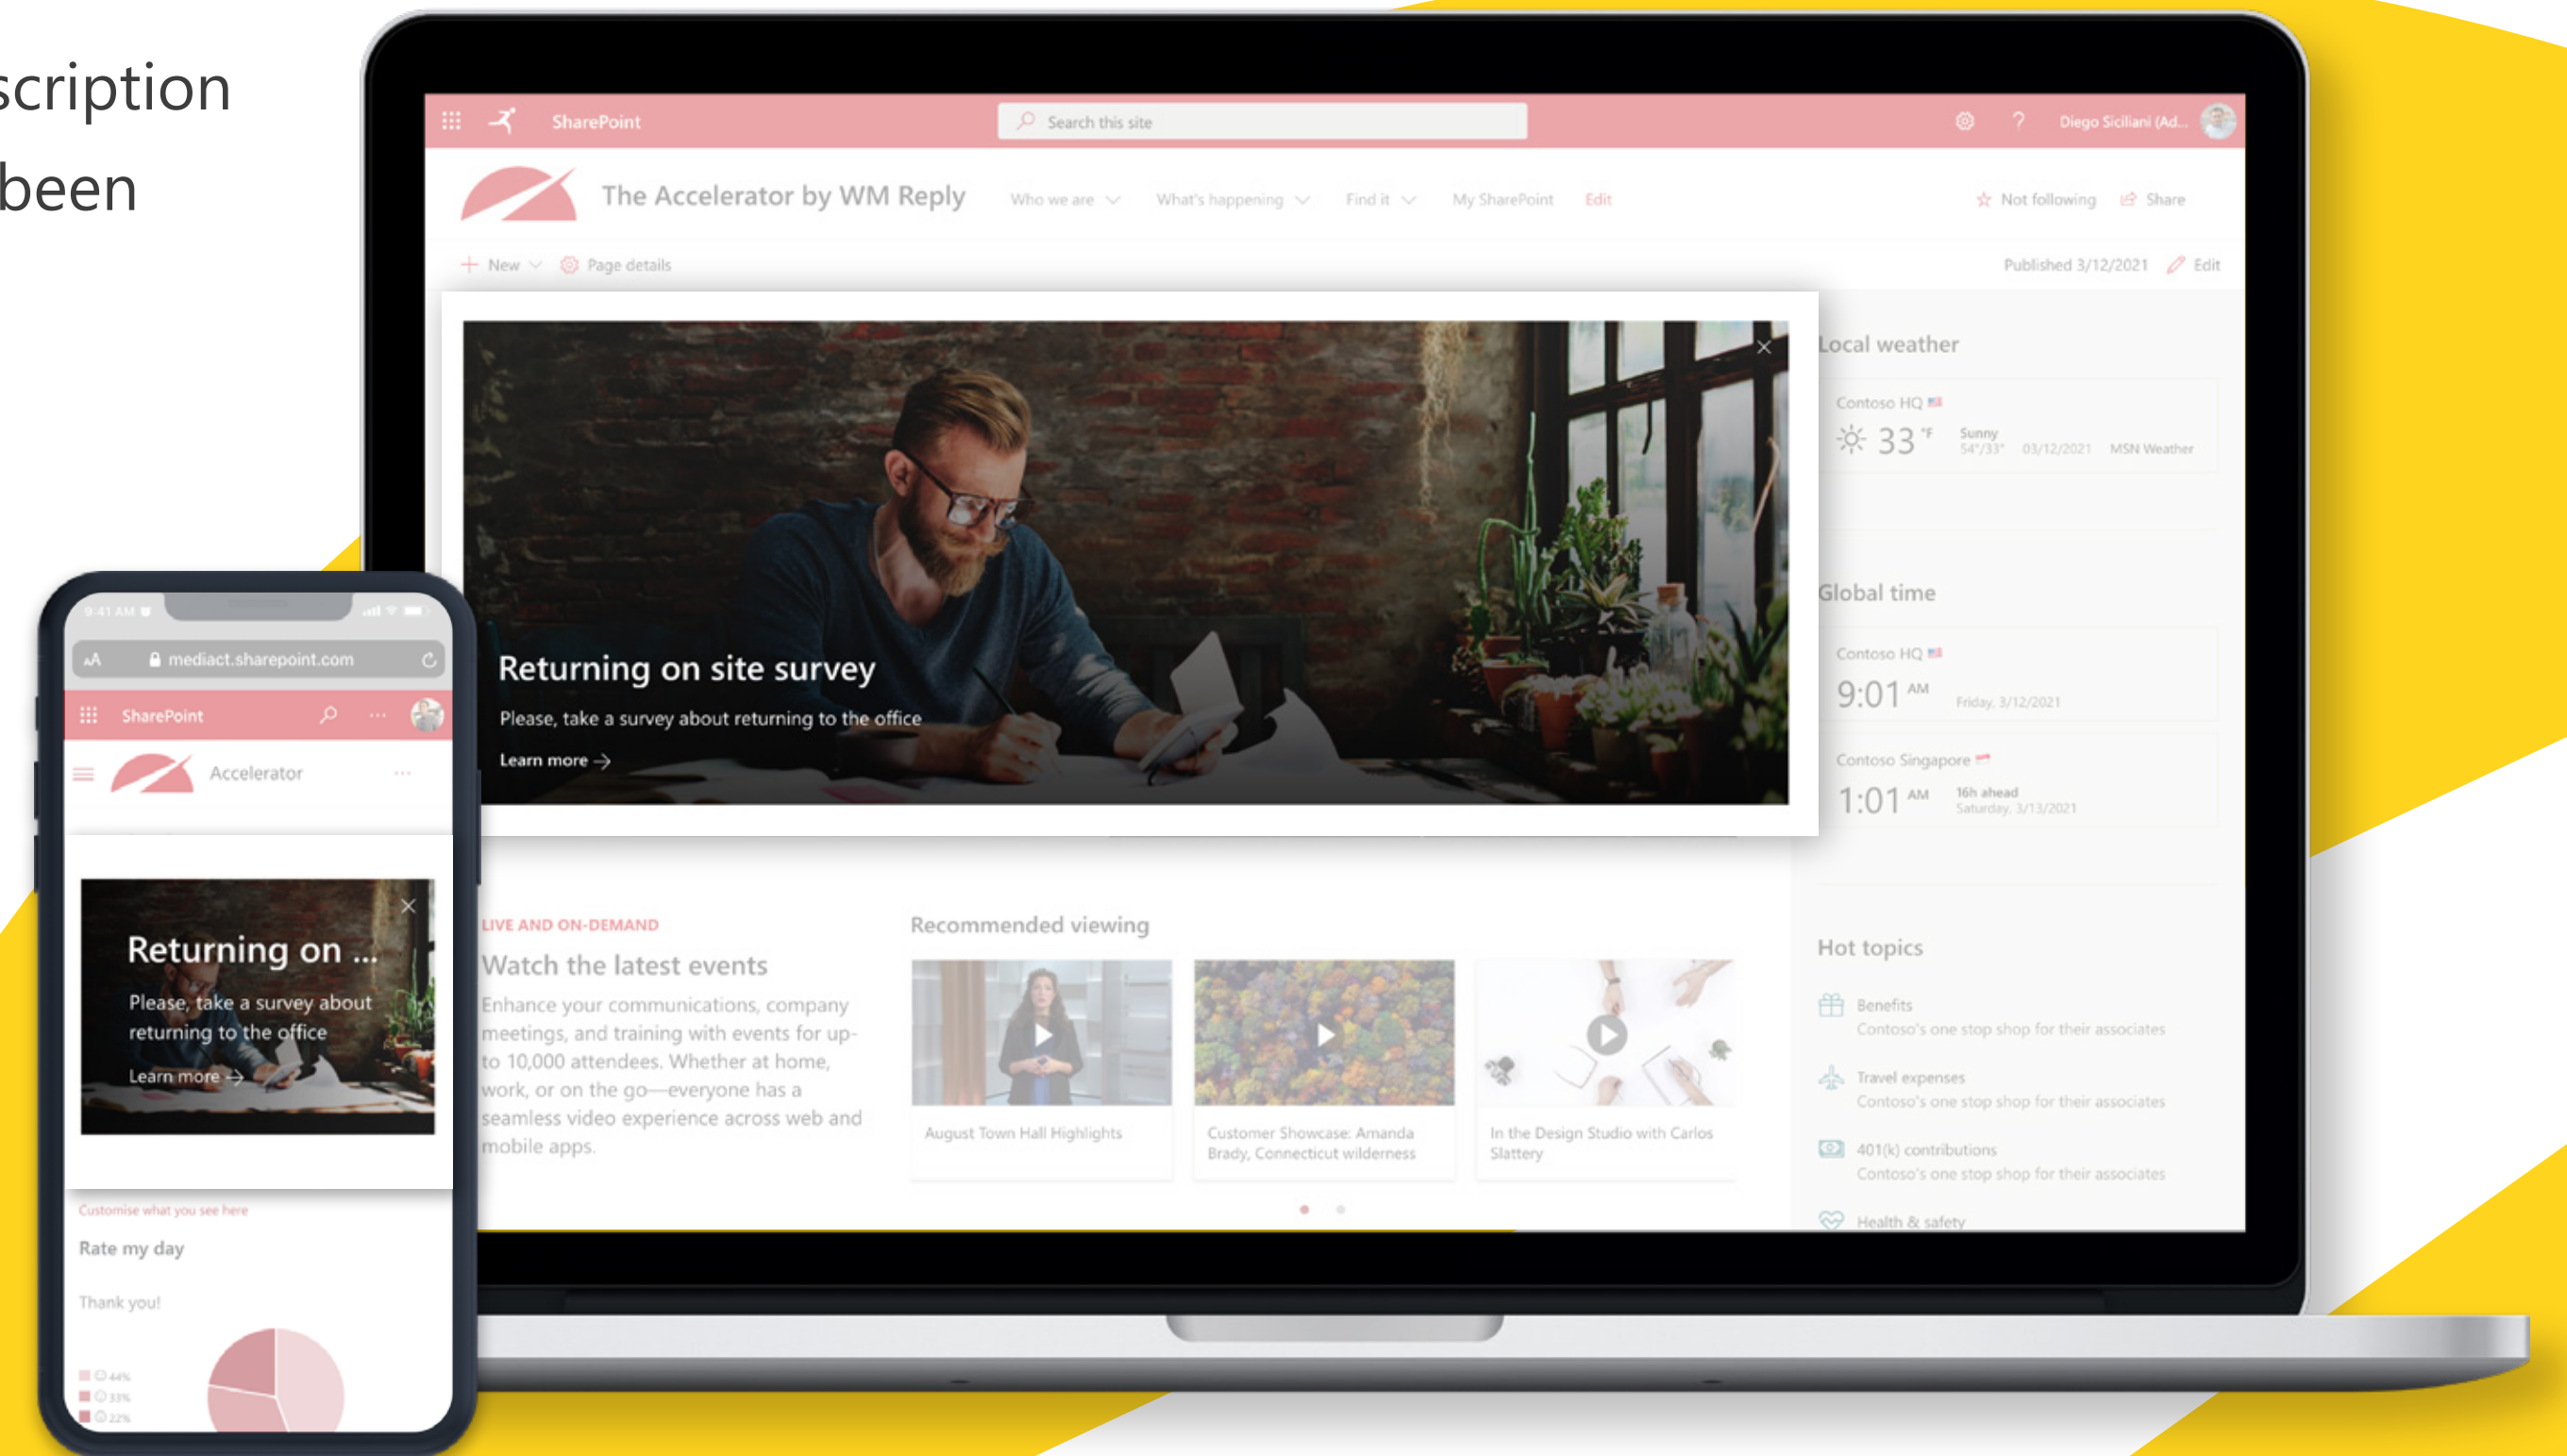

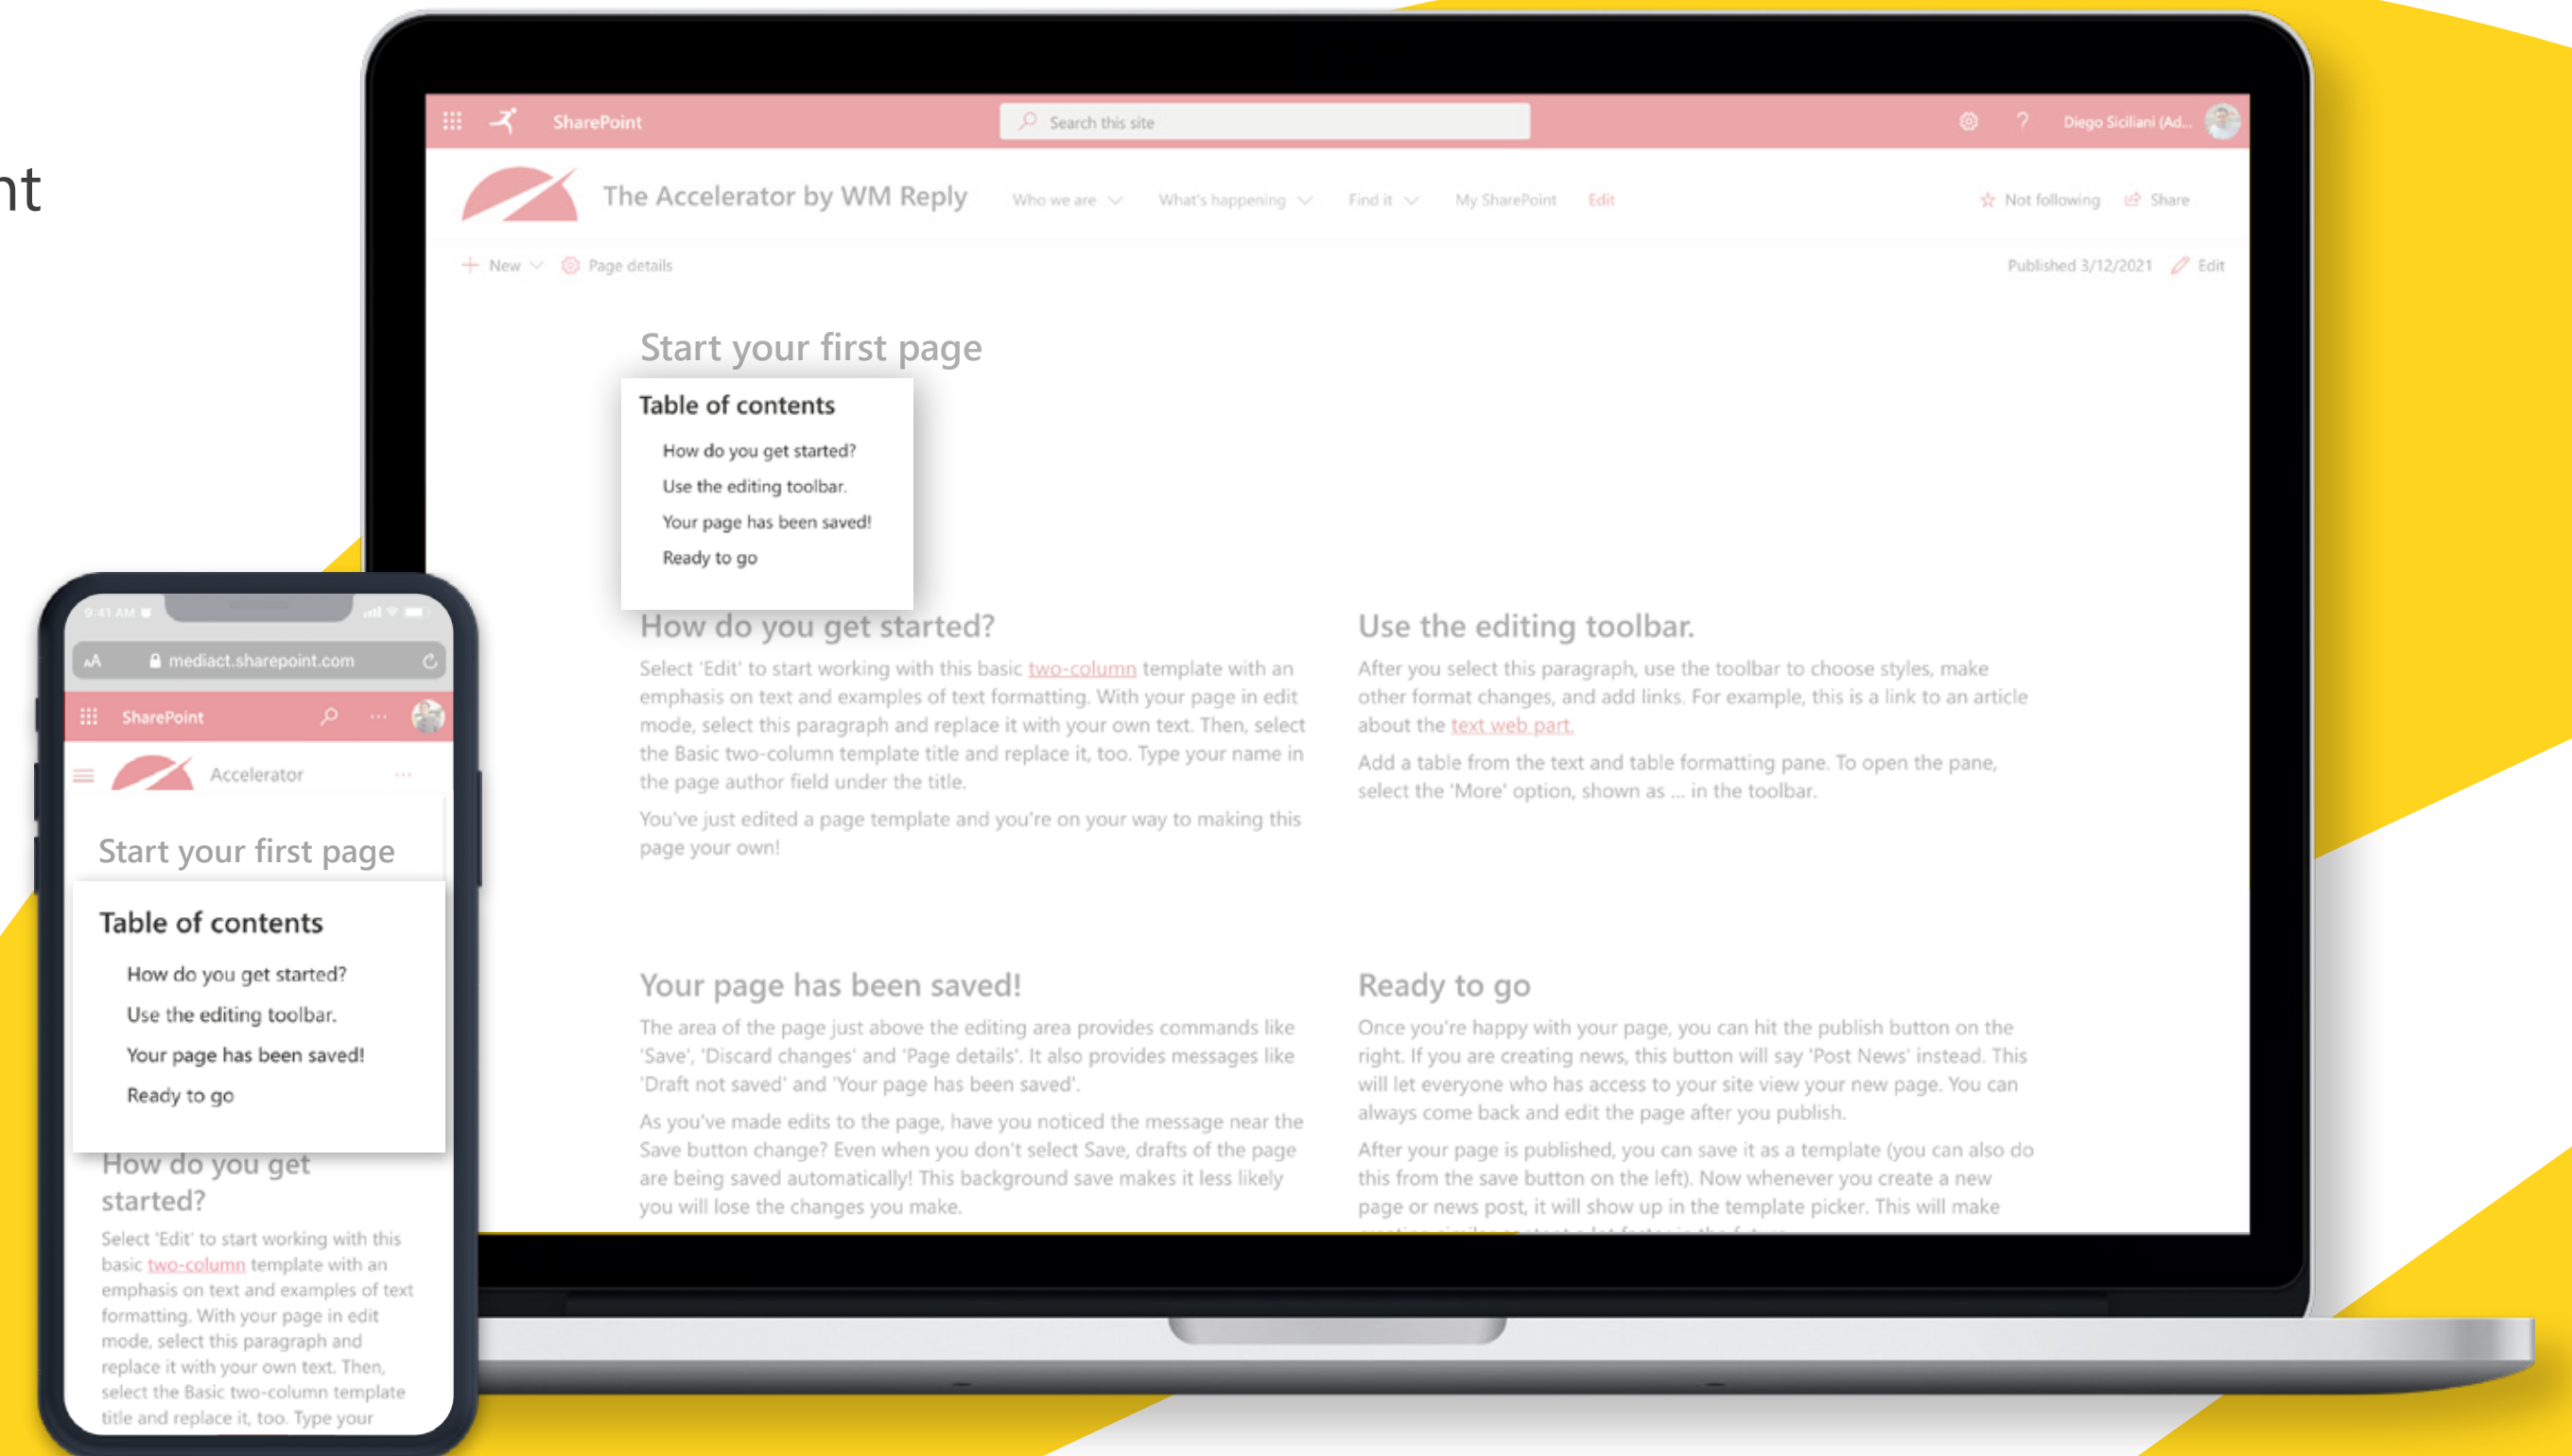

Table of Contents

Great for: policy pages

The Table of Contents web part displays an in-page navigation which is driven dynamically from content added to a SharePoint page. Headings used within text web parts are used to semantically create the table of contents.

Features

- Content authors can configure which heading levels to display
 - › Supports levels 1, 2 and 3
- The scope can be the entire page or restricted to a specific section
- Fully responsive for mobile devices

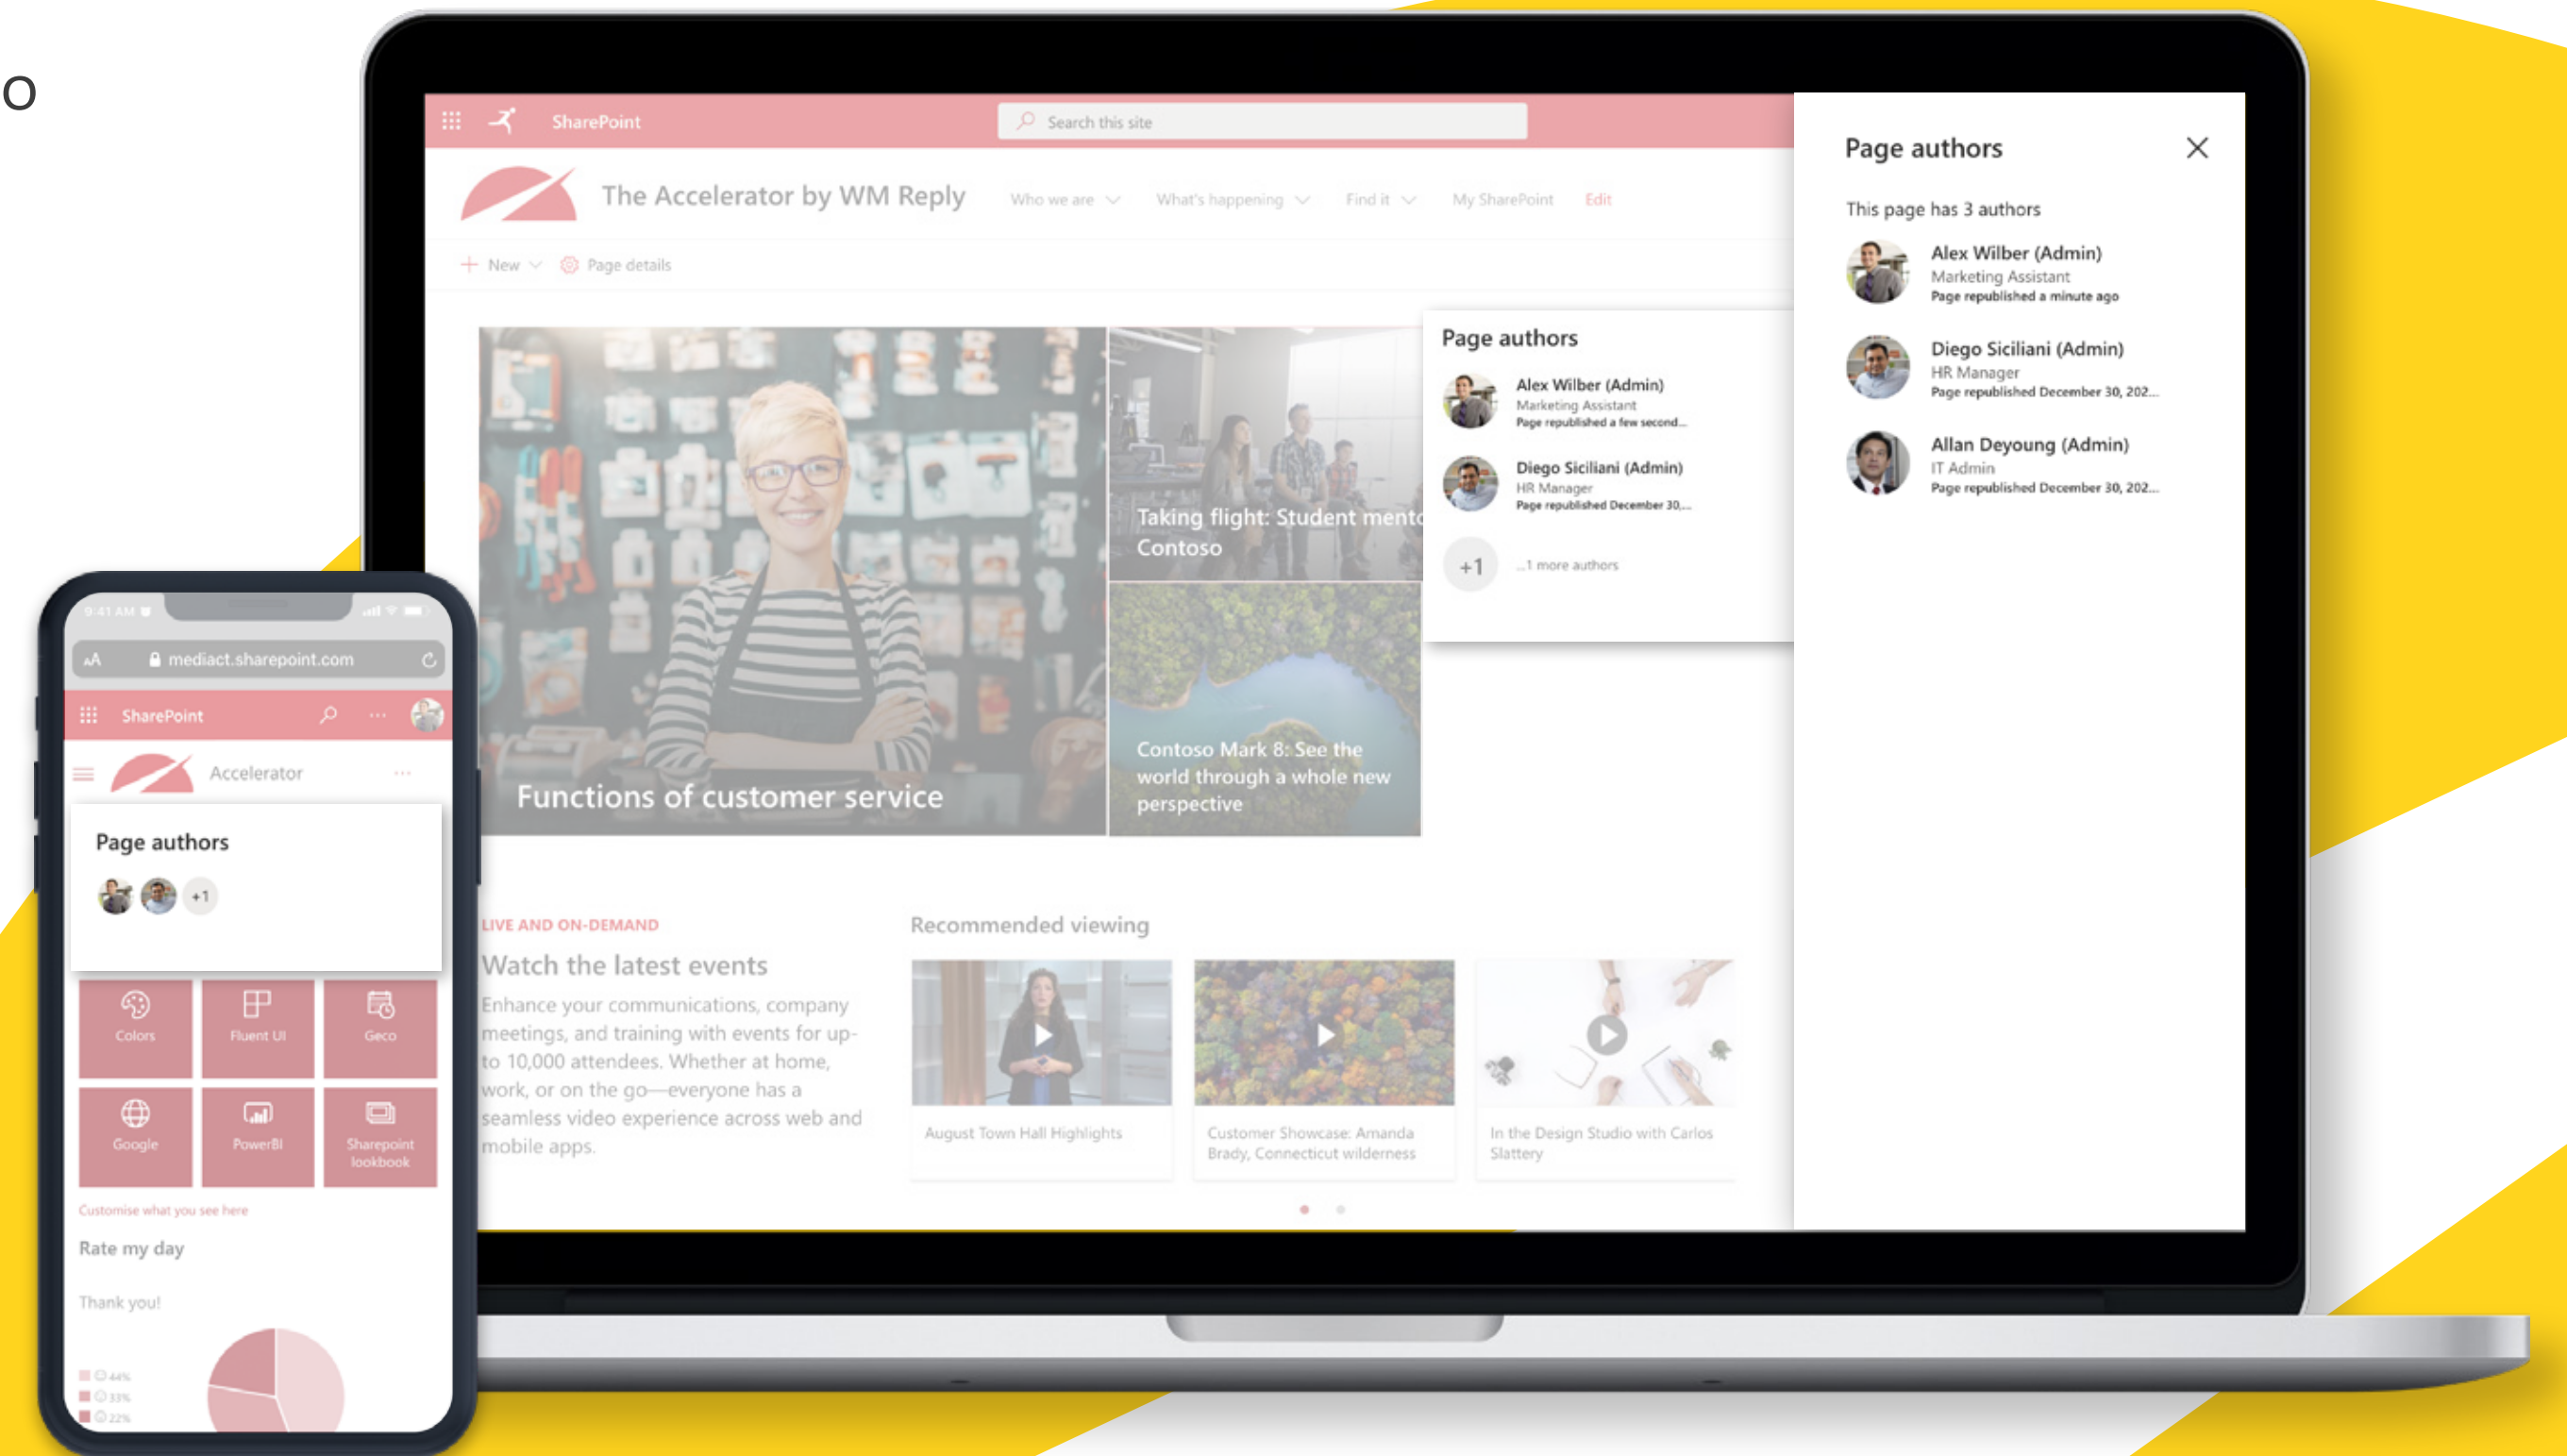

Page Authors

Great for: knowledge bases

The Page Authors web part provides readers with a view of who has previously edited or published a SharePoint page.

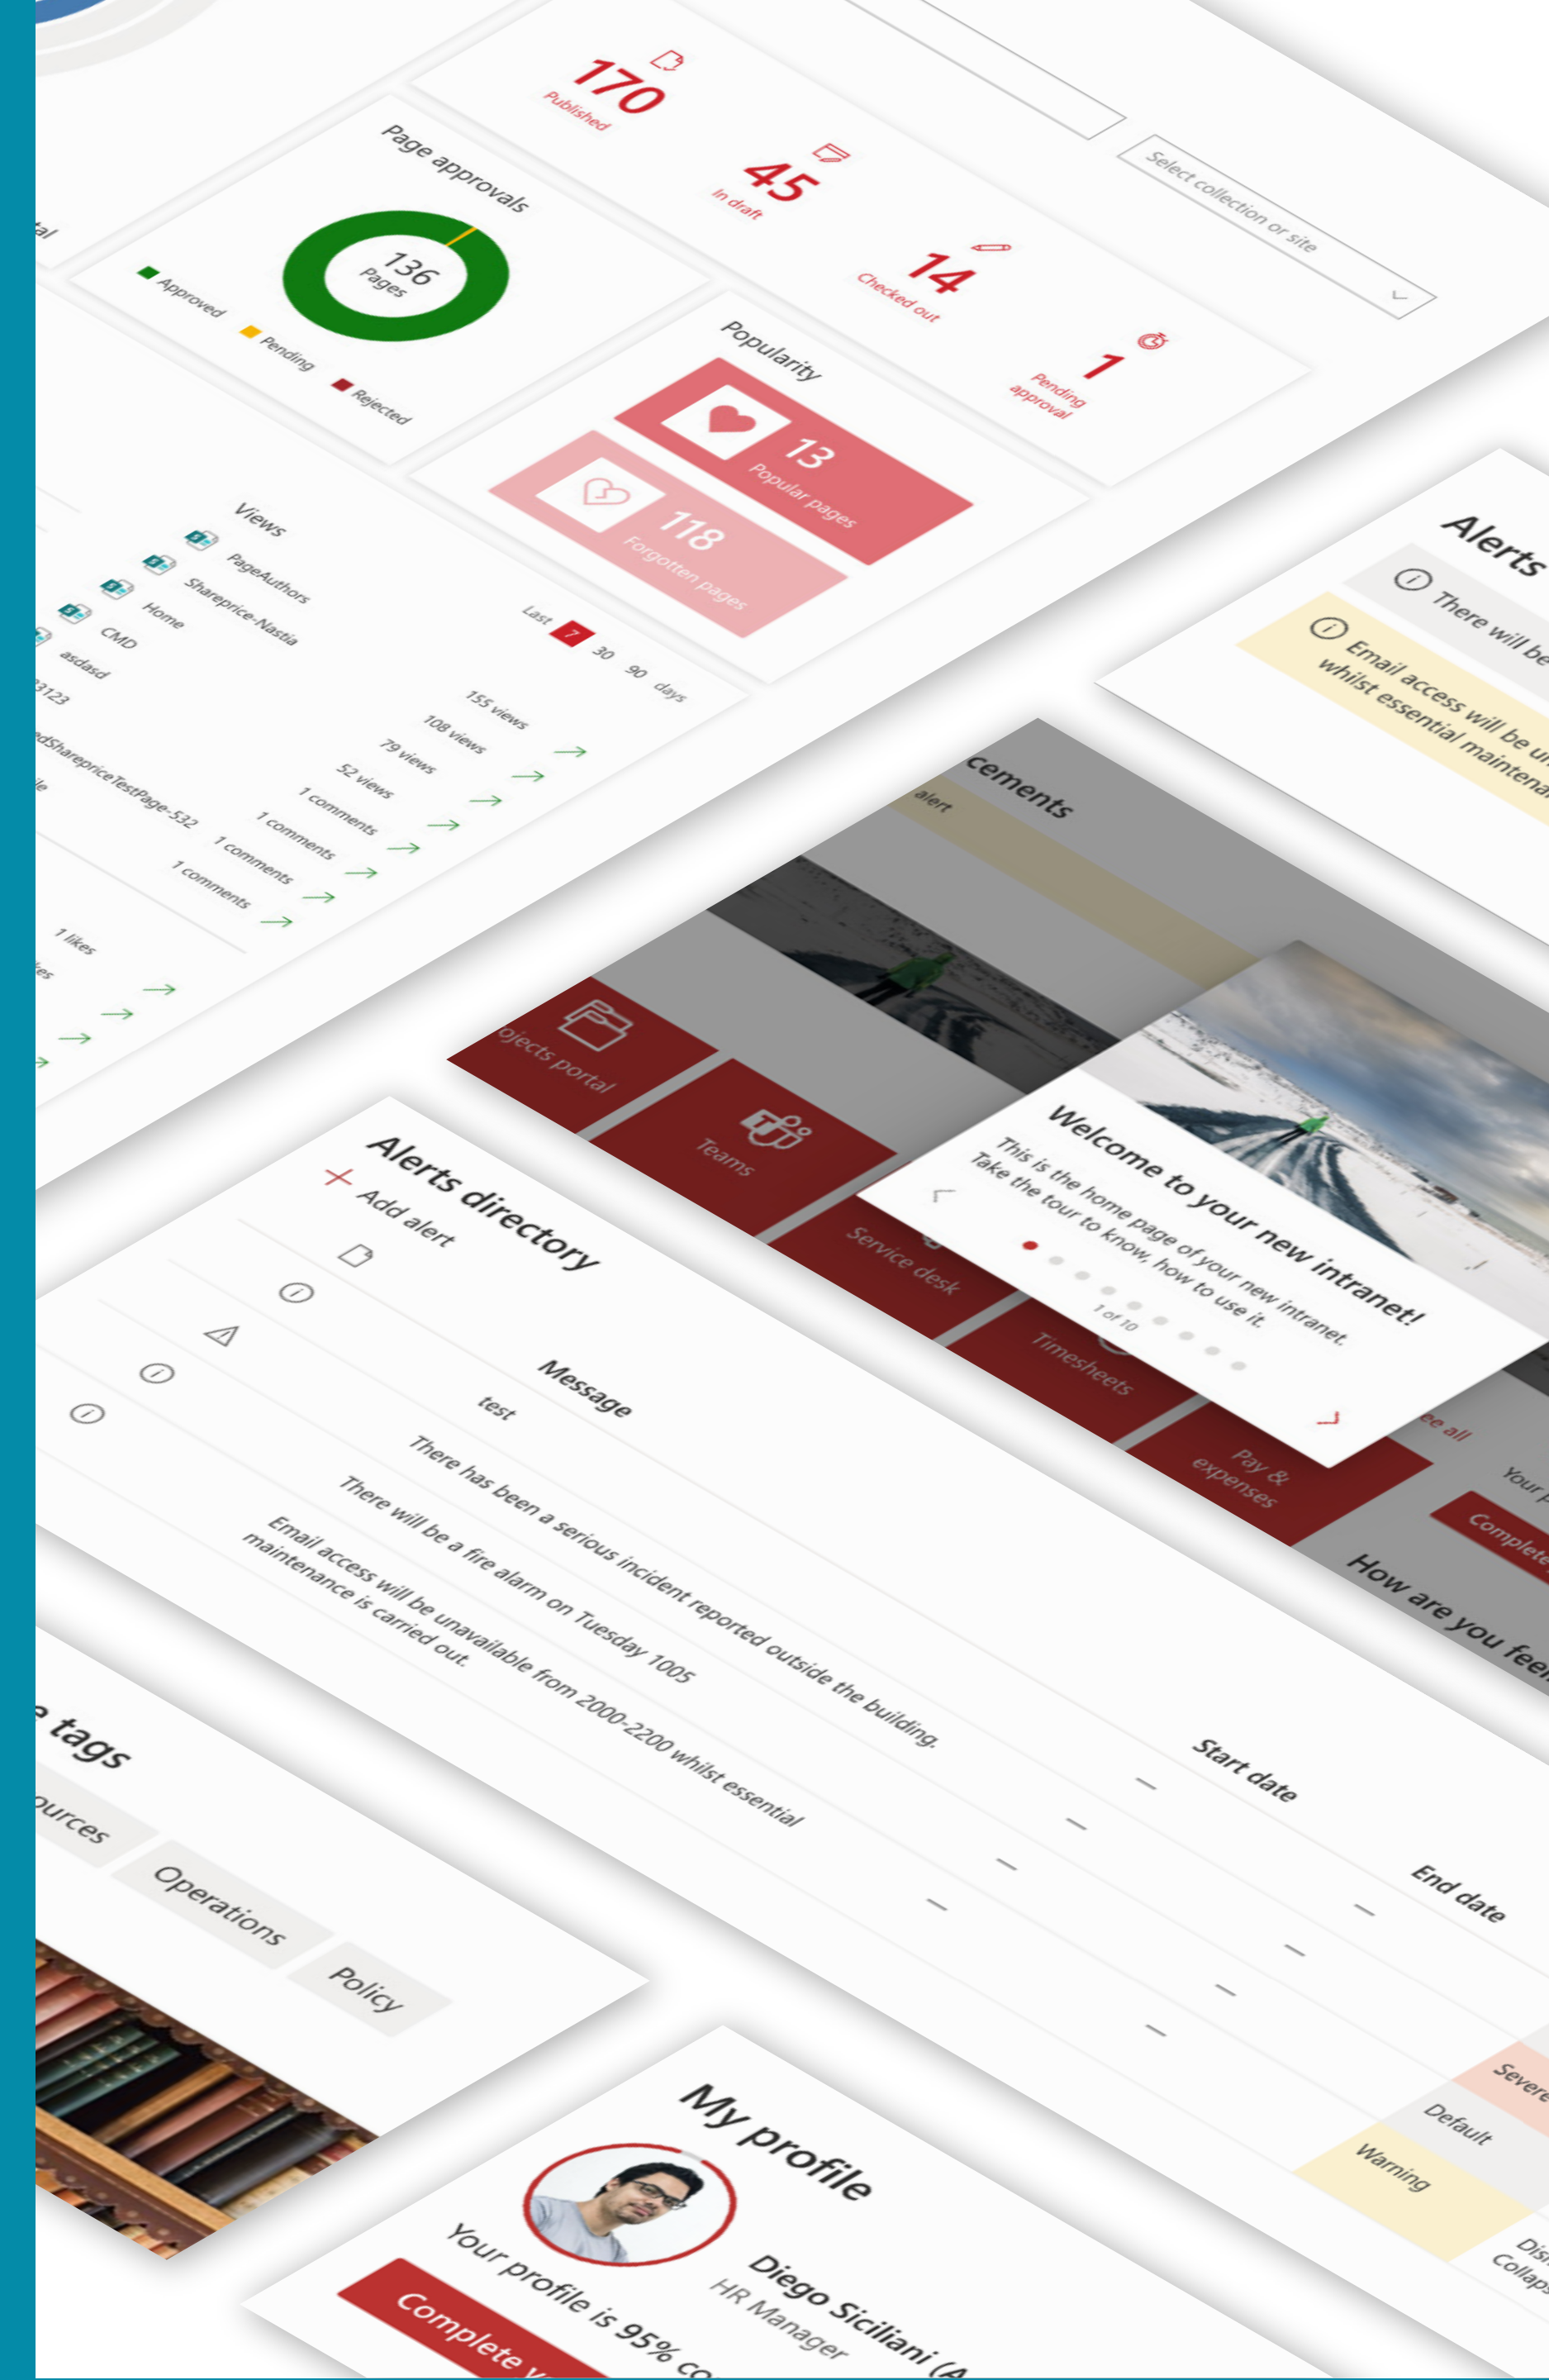

Features

- Provides an at-a-glance view of page history
- Supports compact and standard layout modes
- Fully responsive for mobile devices

Enterprise Readiness

Components that add the controls and monitoring needed for an enterprise portal.

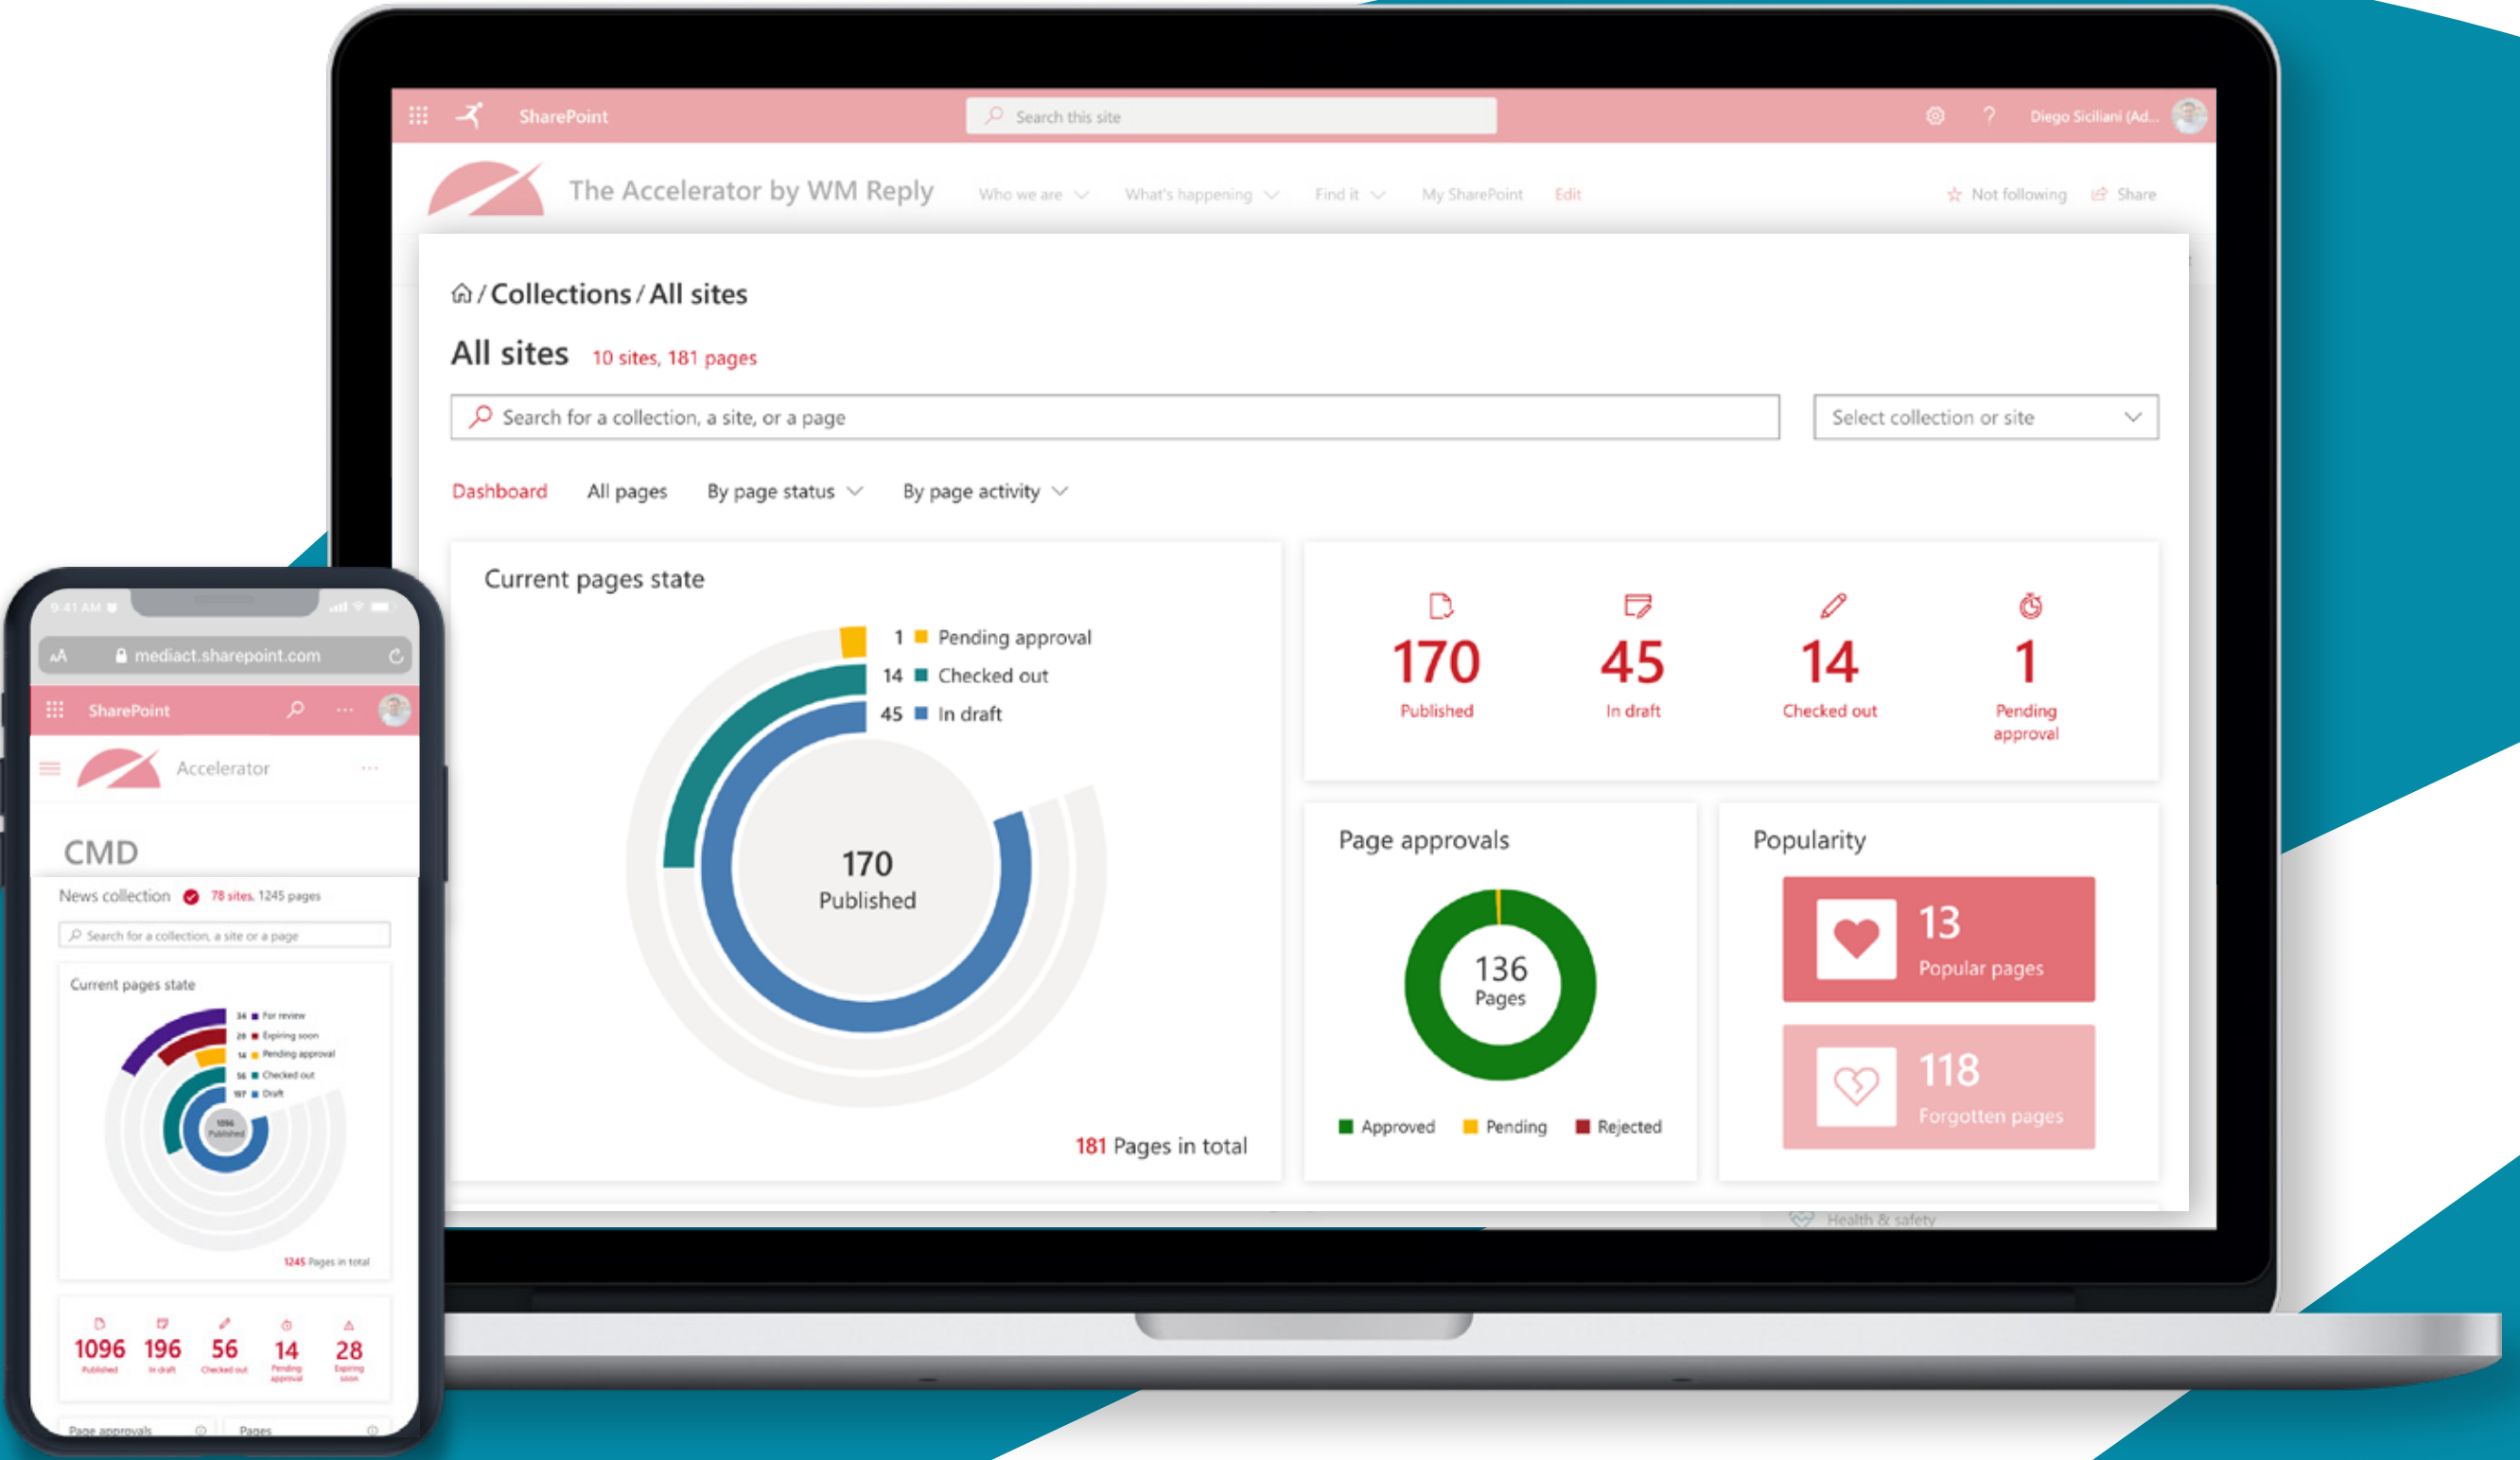

Content Manager Dashboard

Great for: intranets

The Content Manager Dashboard provides a central location for content authors to view the status of their pages from across SharePoint Online.

Features

- Aggregate view of all pages and their status
- Surface metadata of individual pages
- Define areas of interest across multiple sites, e.g. News or Policies

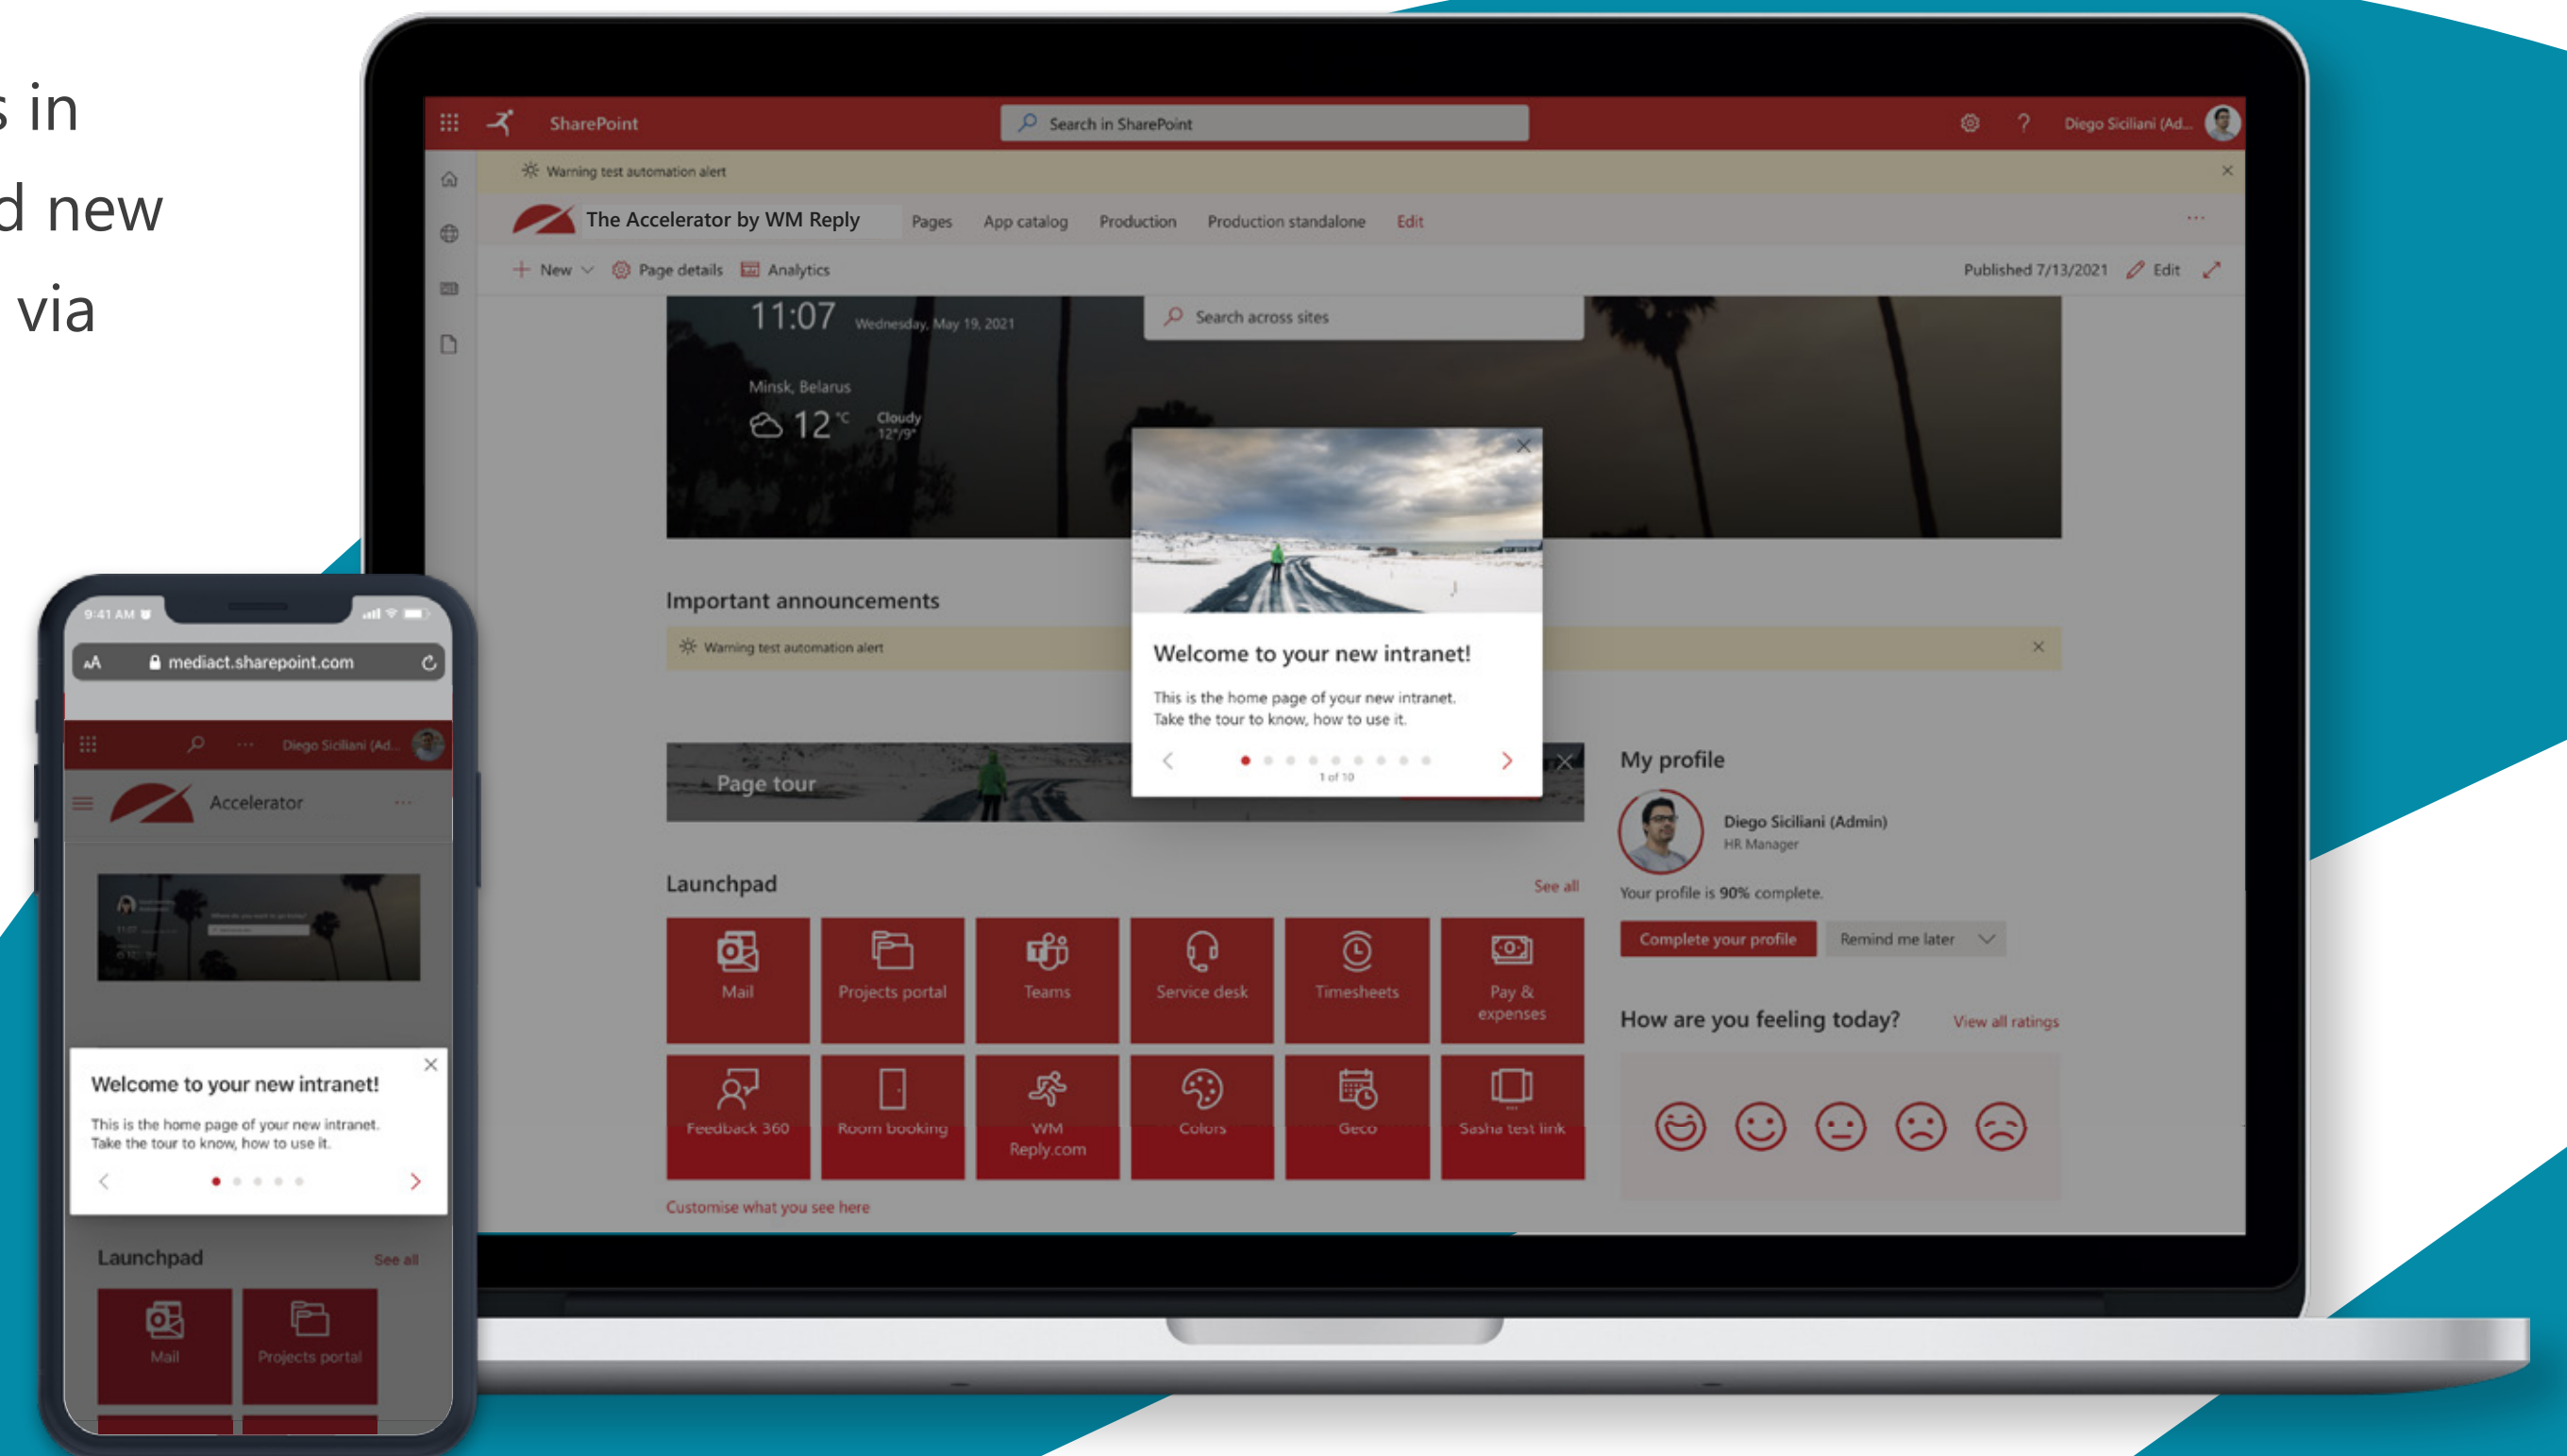

Page Tour

Great for: intranets

The Page Tour web part displays an interactive guide for pages in order to highlight new features, guide site visitors and onboard new users. Content authors can create and configure the page tour via the web part properties.

Features

- Automatically display the tour to new visitors
- Users can dismiss the tour as required
- Include O365 elements in the tour (such as the App Launcher)
- Fully responsive for mobile devices

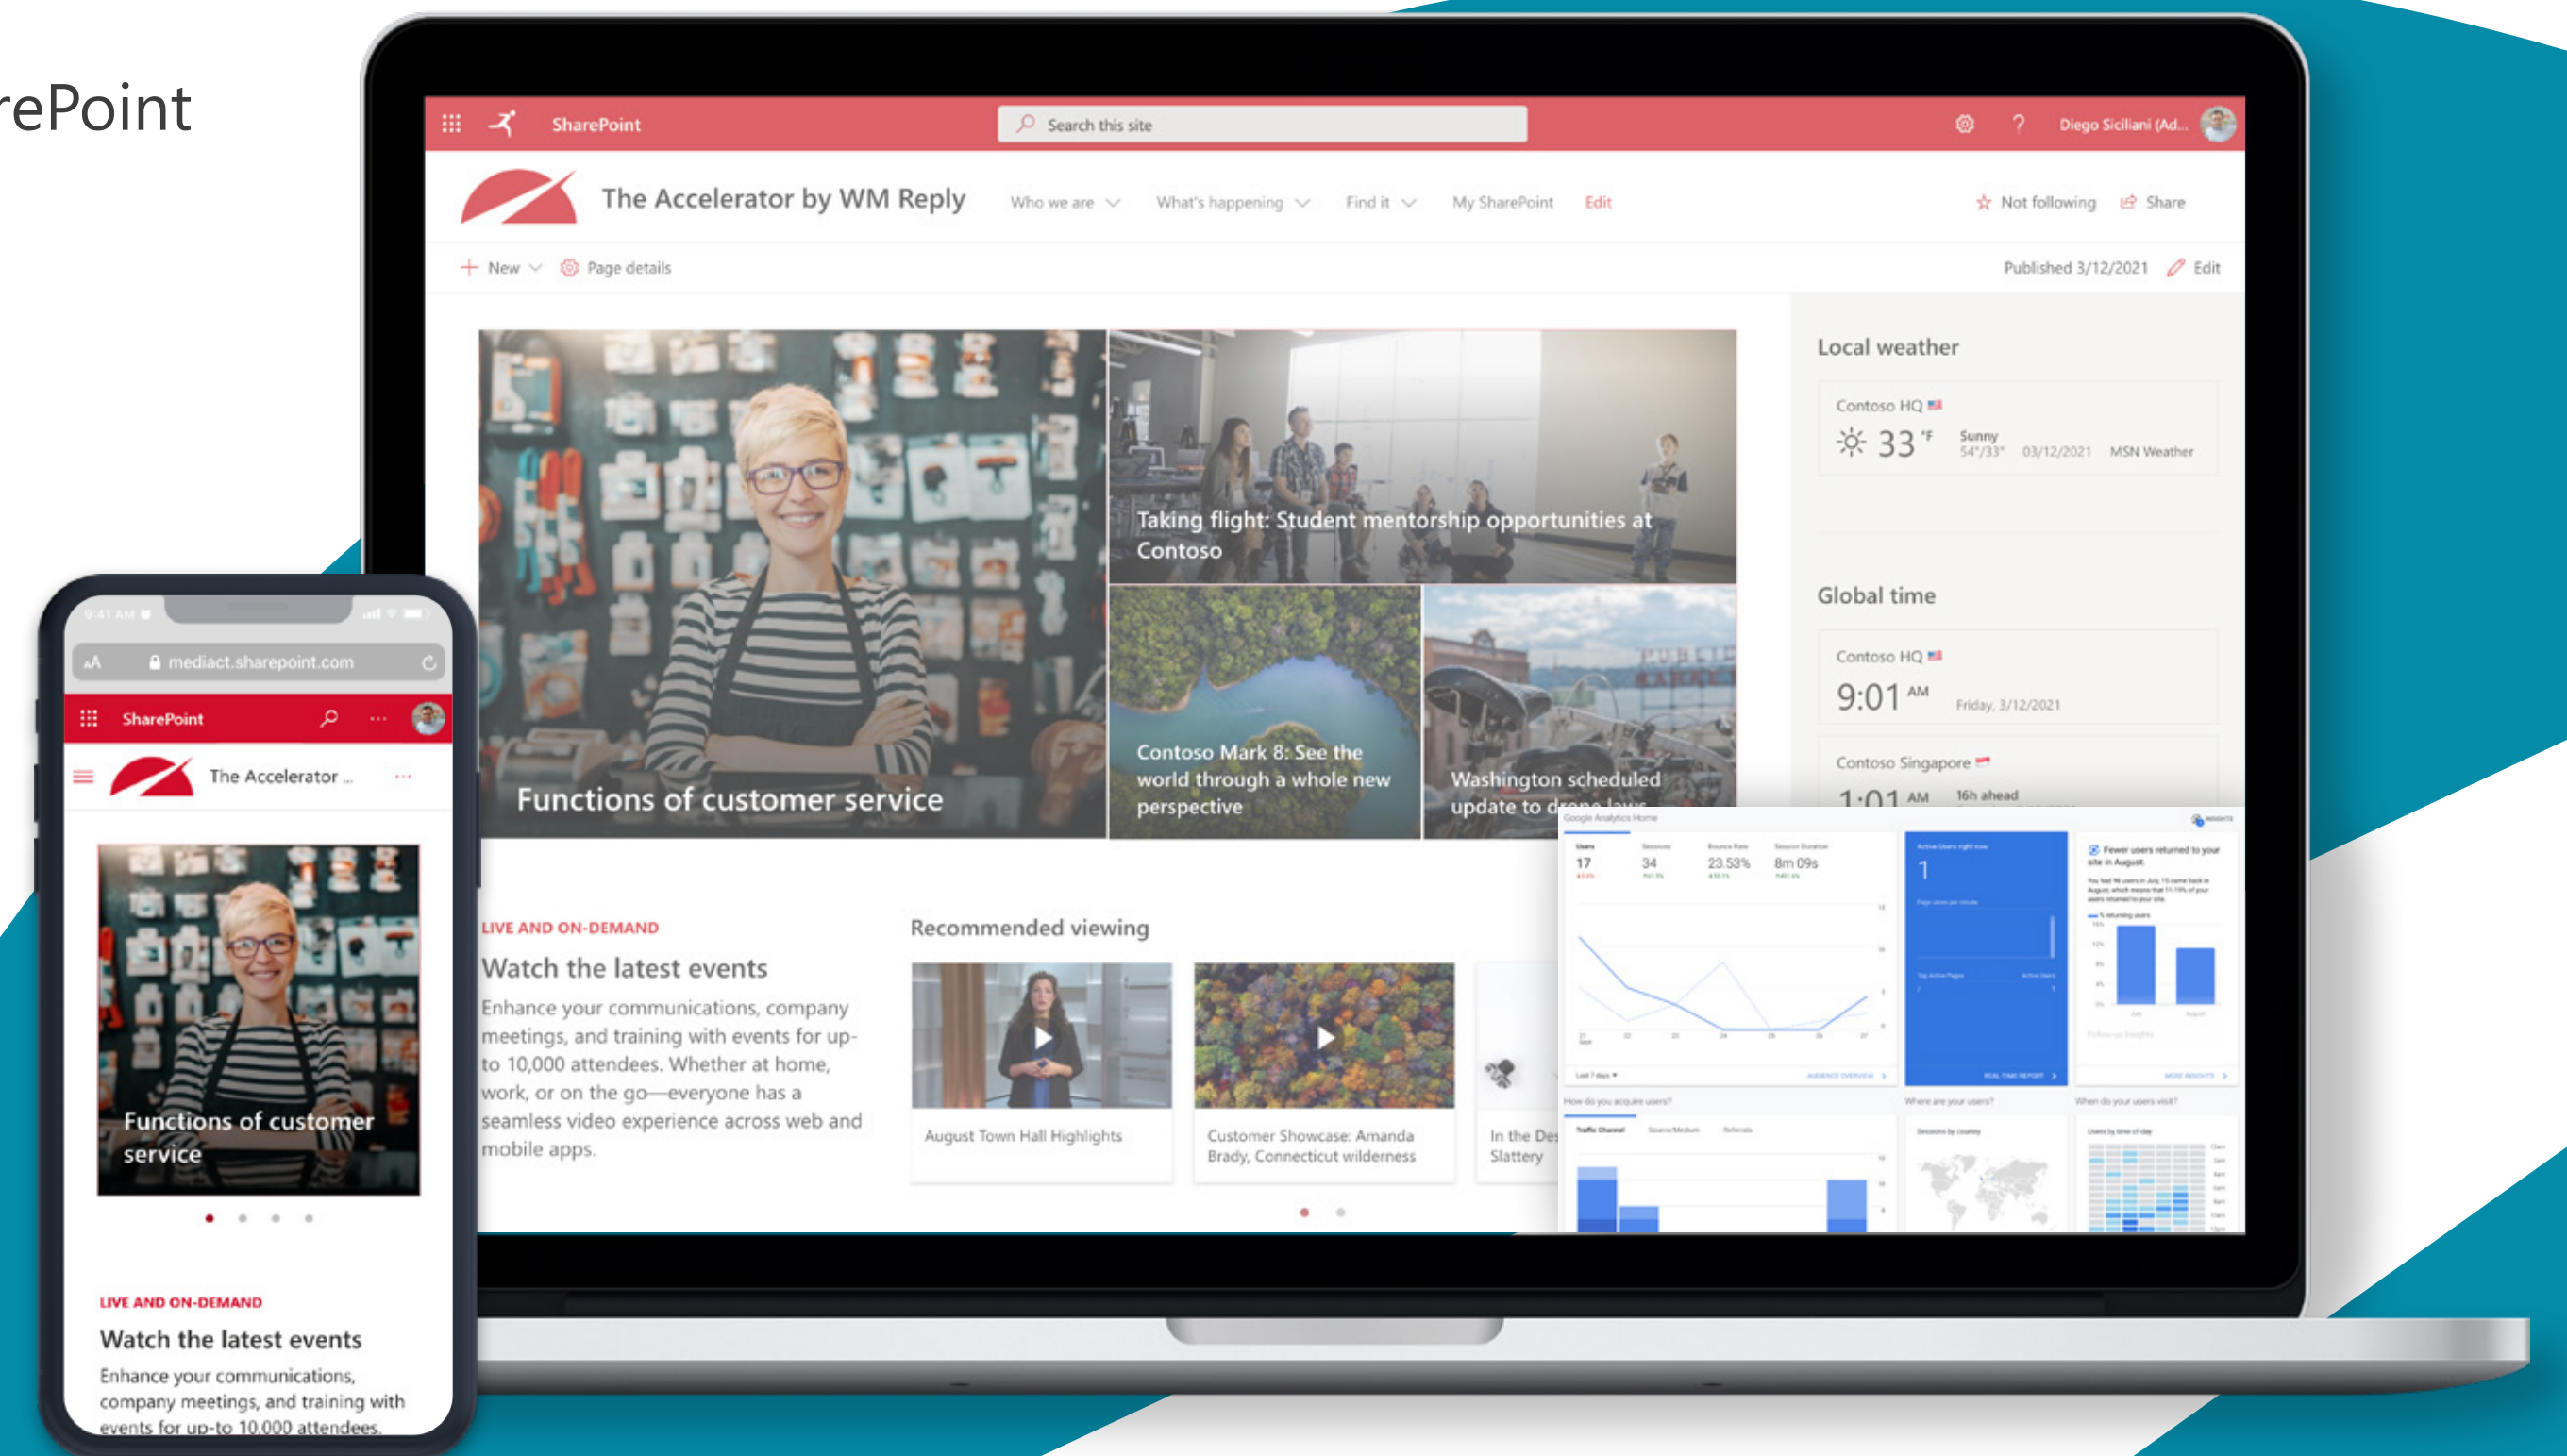

Site Analytics

Great for: intranets

The Site Analytics application customiser can be added to SharePoint sites to provide integration with third-party analytics tools.

Features

- Google Analytics integration provided
- Multiple tracking IDs can be associated with different sites
- Additional data such as hub site association is tracked

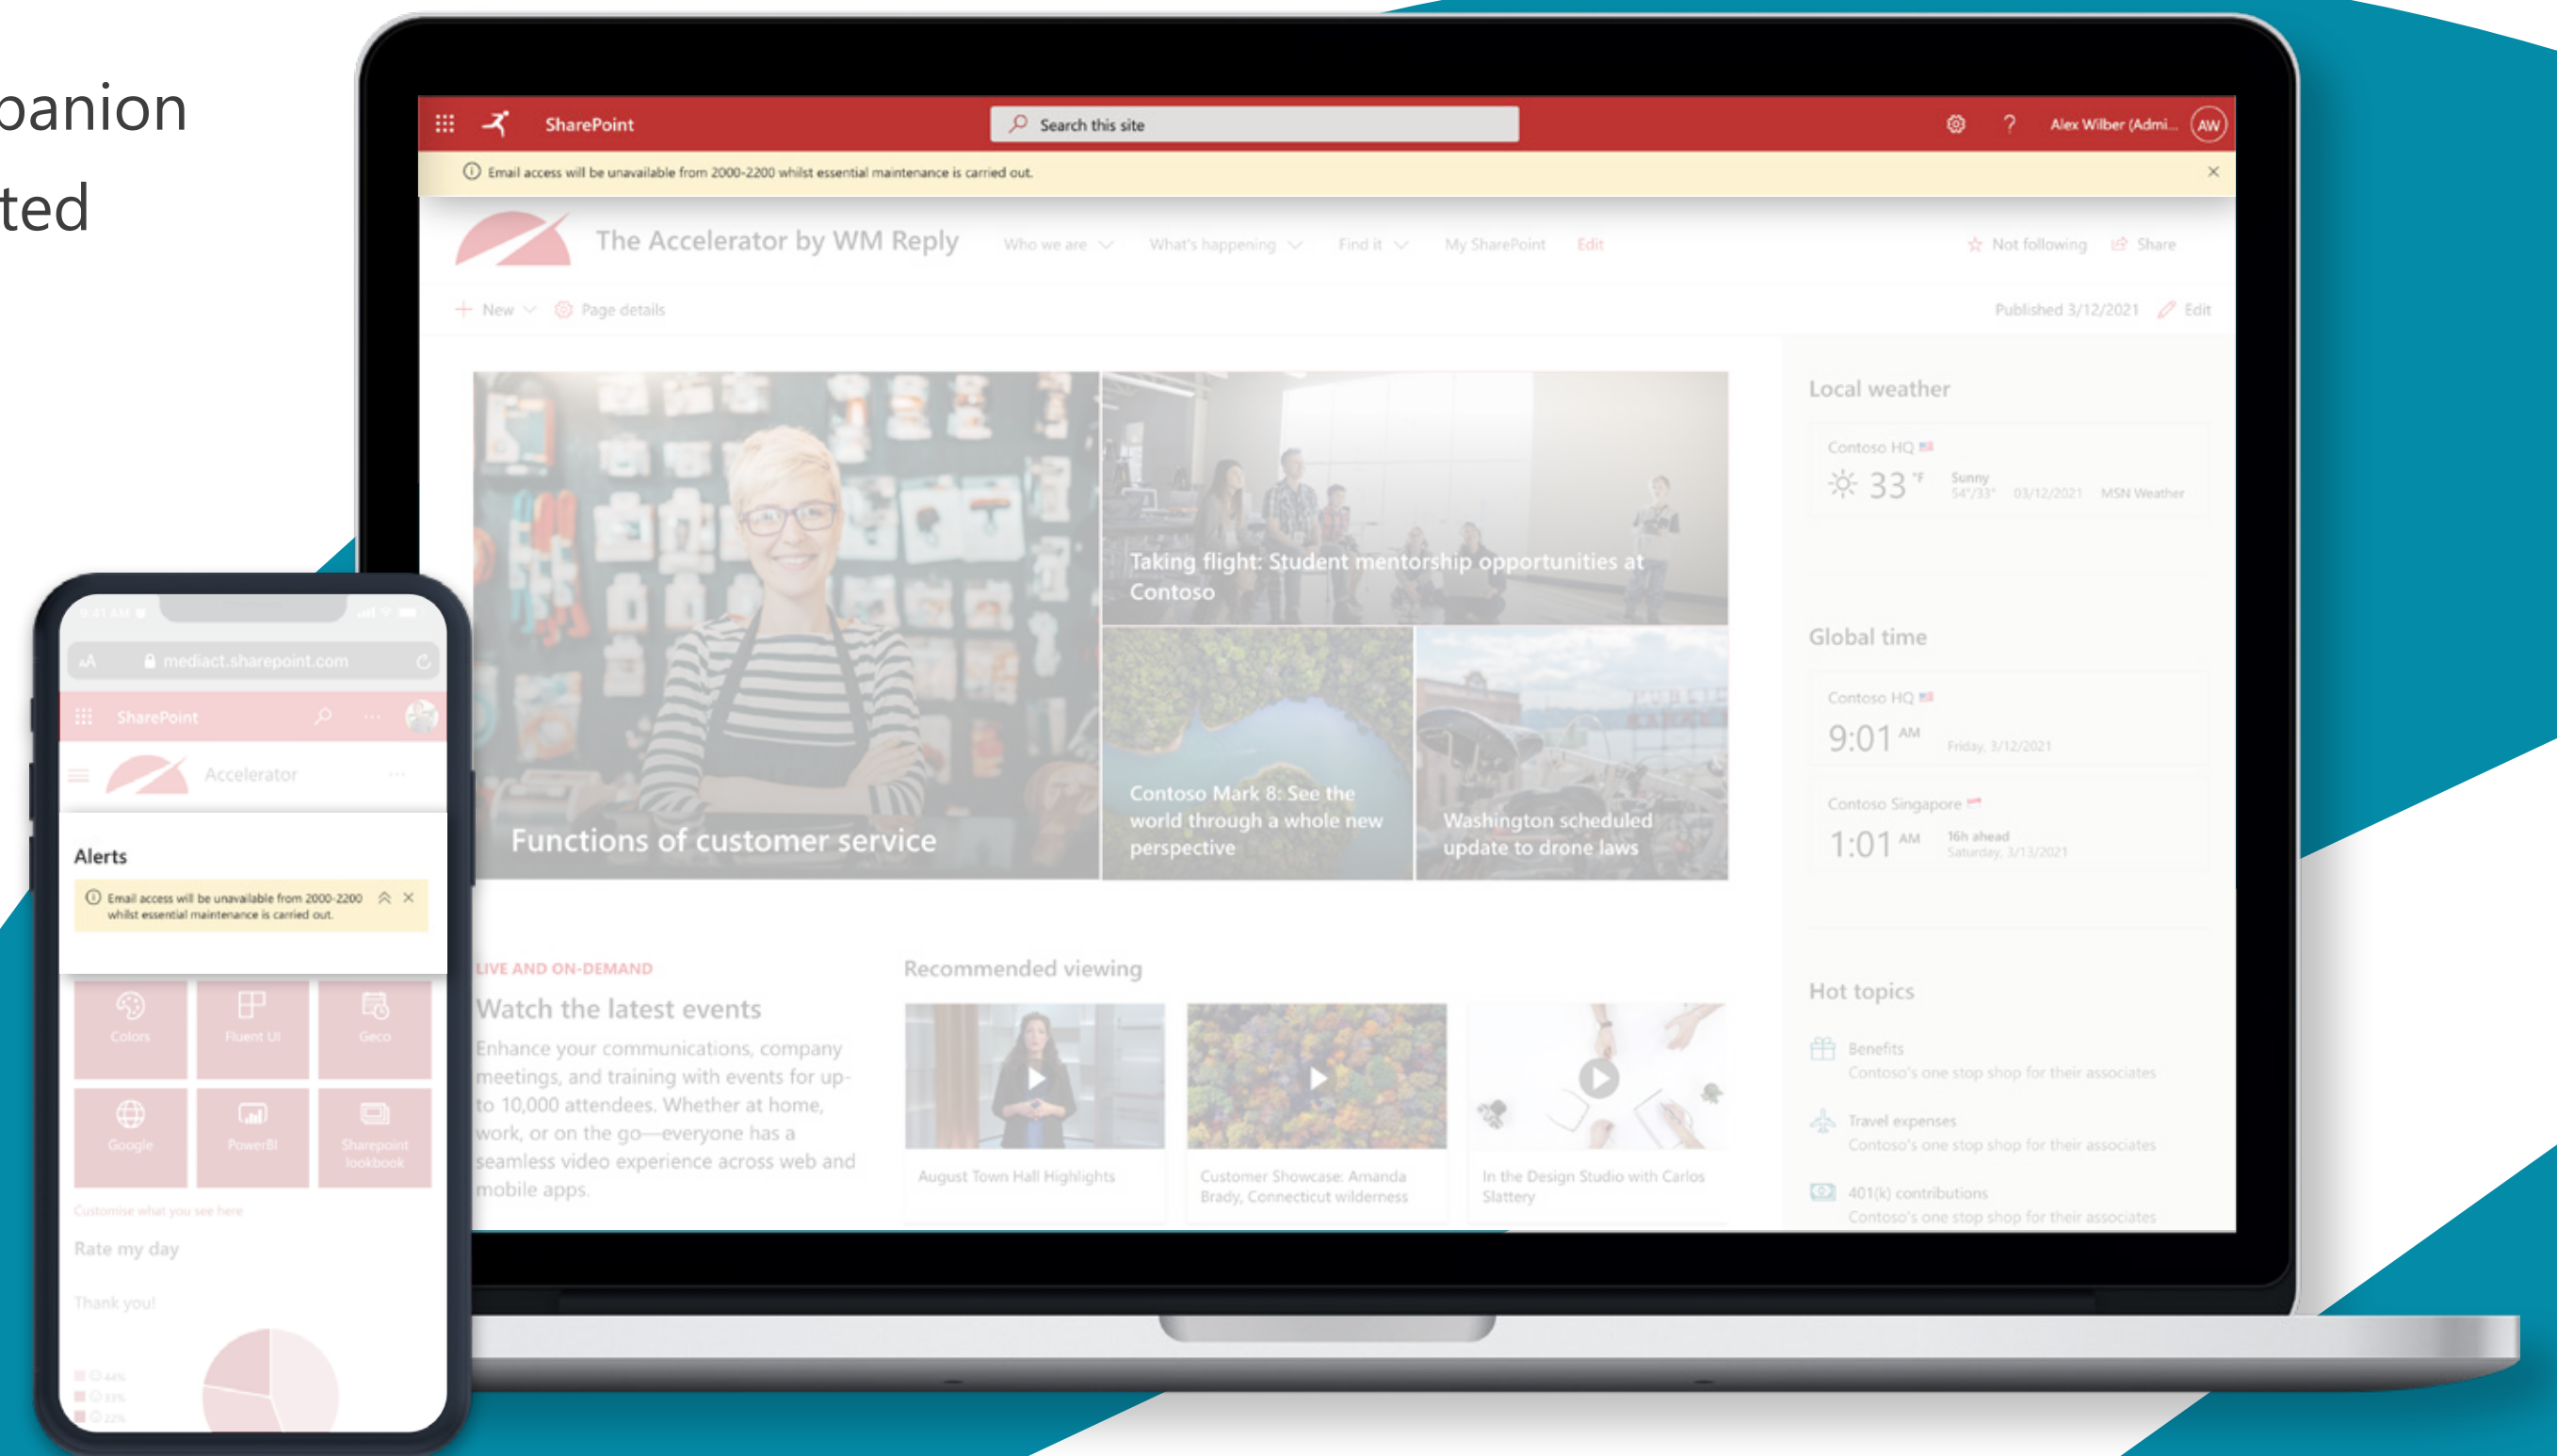

Alerts

Great for: intranets

The Alerts component displays messages (created via the companion Alerts directory) either in a web part on specific pages, or injected prominently above the navigation across entire sites.

Features

- Display on specific pages via web parts
- Prominently display above the navigation across sites
- Allow users to dismiss alerts once read
- Schedule alerts for display in the future
- Fully responsive for mobile devices

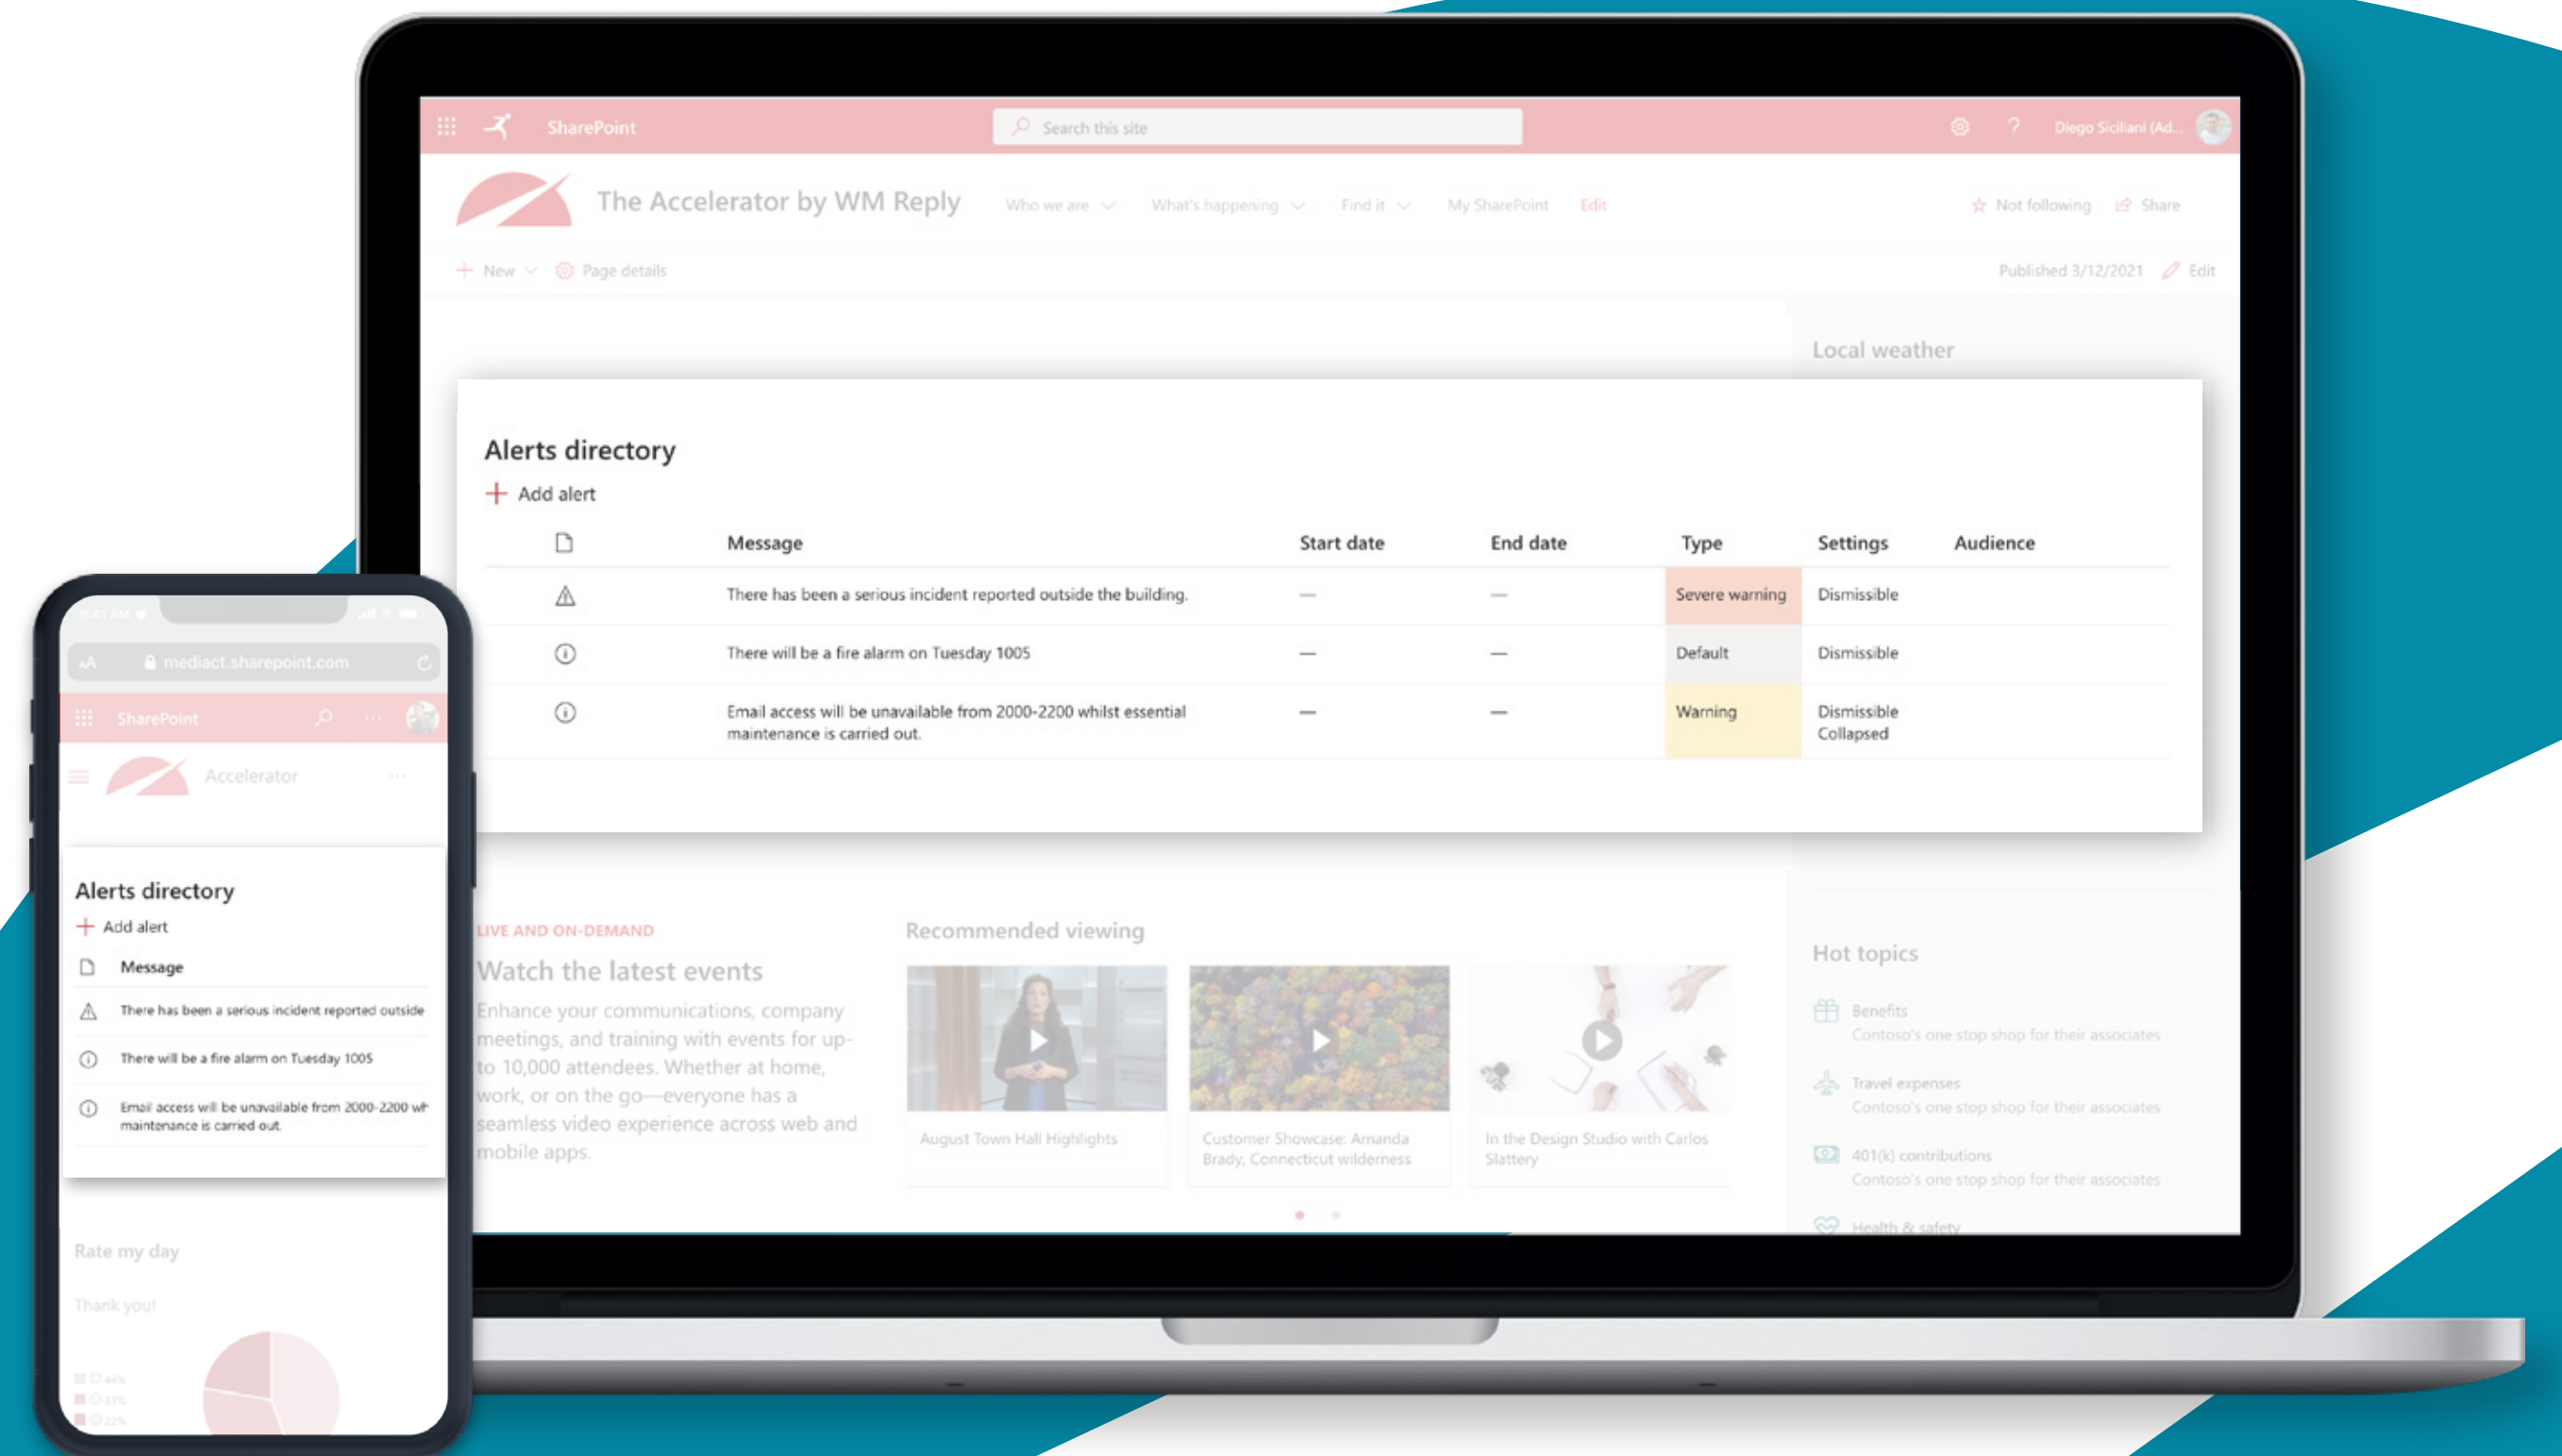

Alerts Directory

Great for: intranets

The Alerts Directory web part allows content authors to create messages to be displayed in the Alerts component. Alerts can be created with a range of options, such as type, icon and scheduling date.

Features

- Works alongside the Alerts component
- Manage a curated list of alerts in a single location
- Allow users to dismiss alerts once read
- Schedule alerts for display in the future
- Target alerts at specific audiences

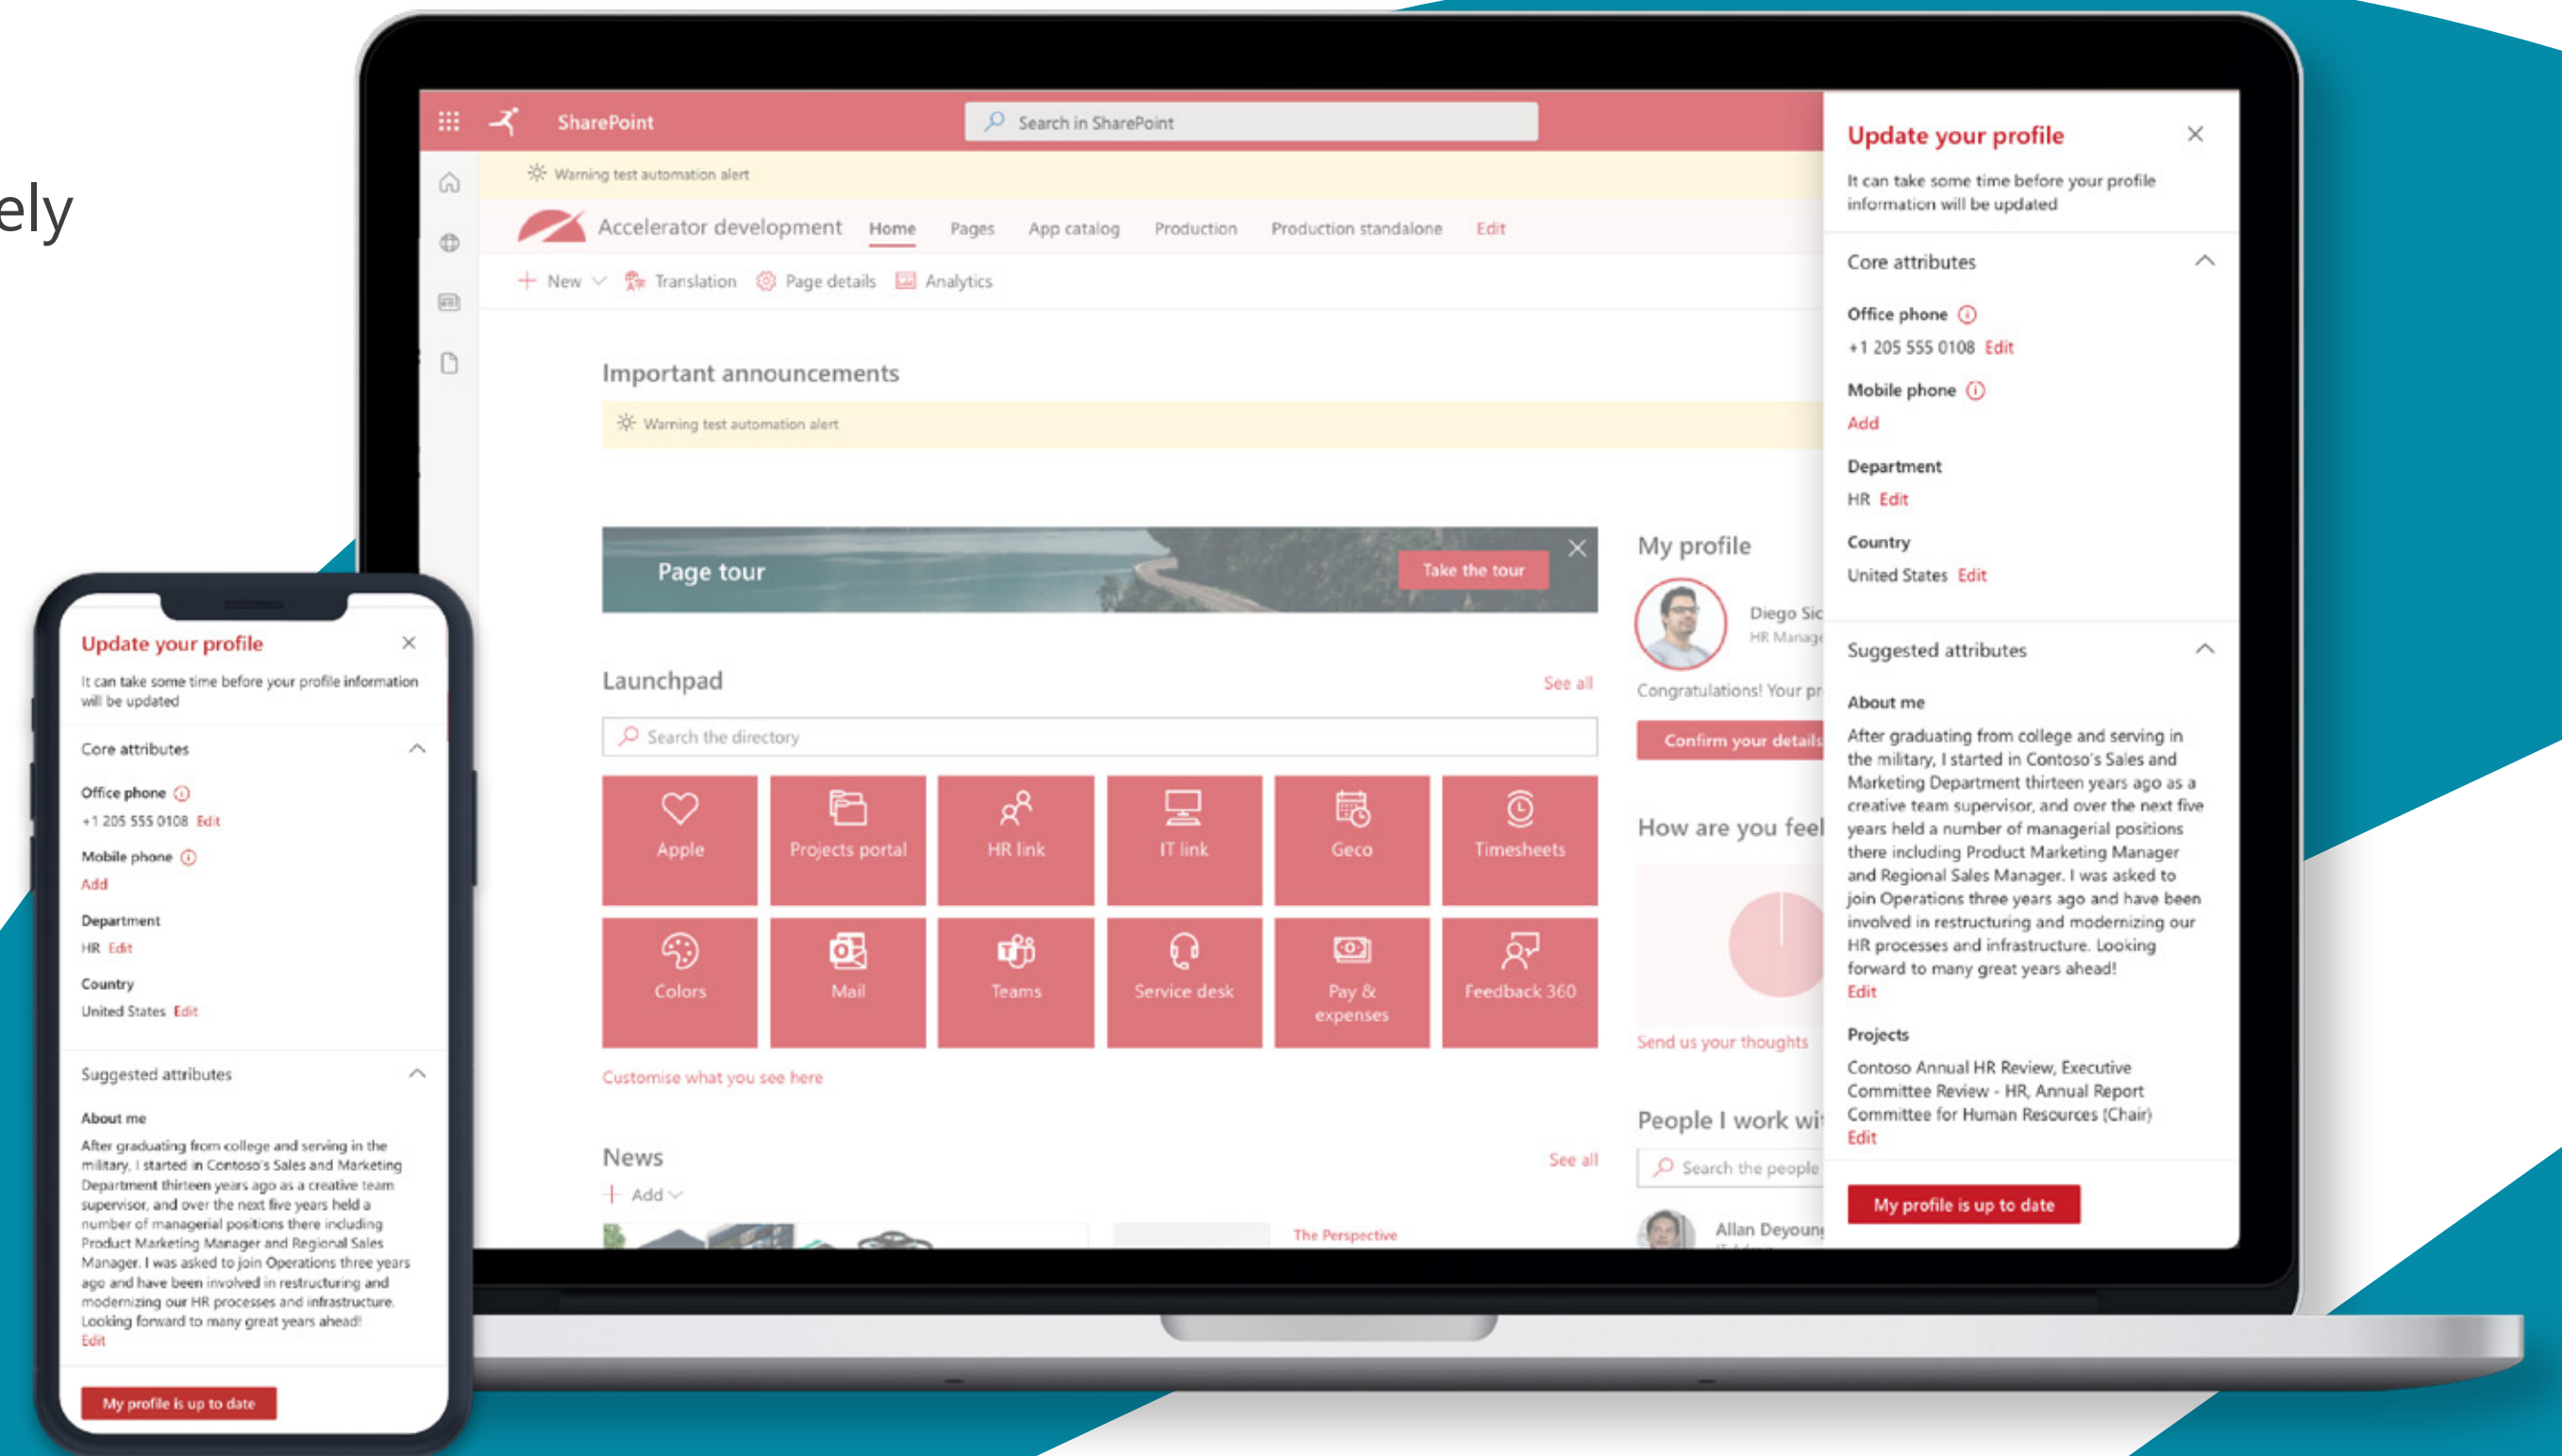

User Profile

Great for: intranets

The User Profile web part allows intranet owners to set the key user profile properties required by your organisation and actively promotes their completion through automated reminders.

Features

- Configure mandatory and suggested profile fields for your users to complete
- Direct users to the correct profile self-service entry point used by your organisation
- Automate and schedule reminders to prompt users to update their profiles

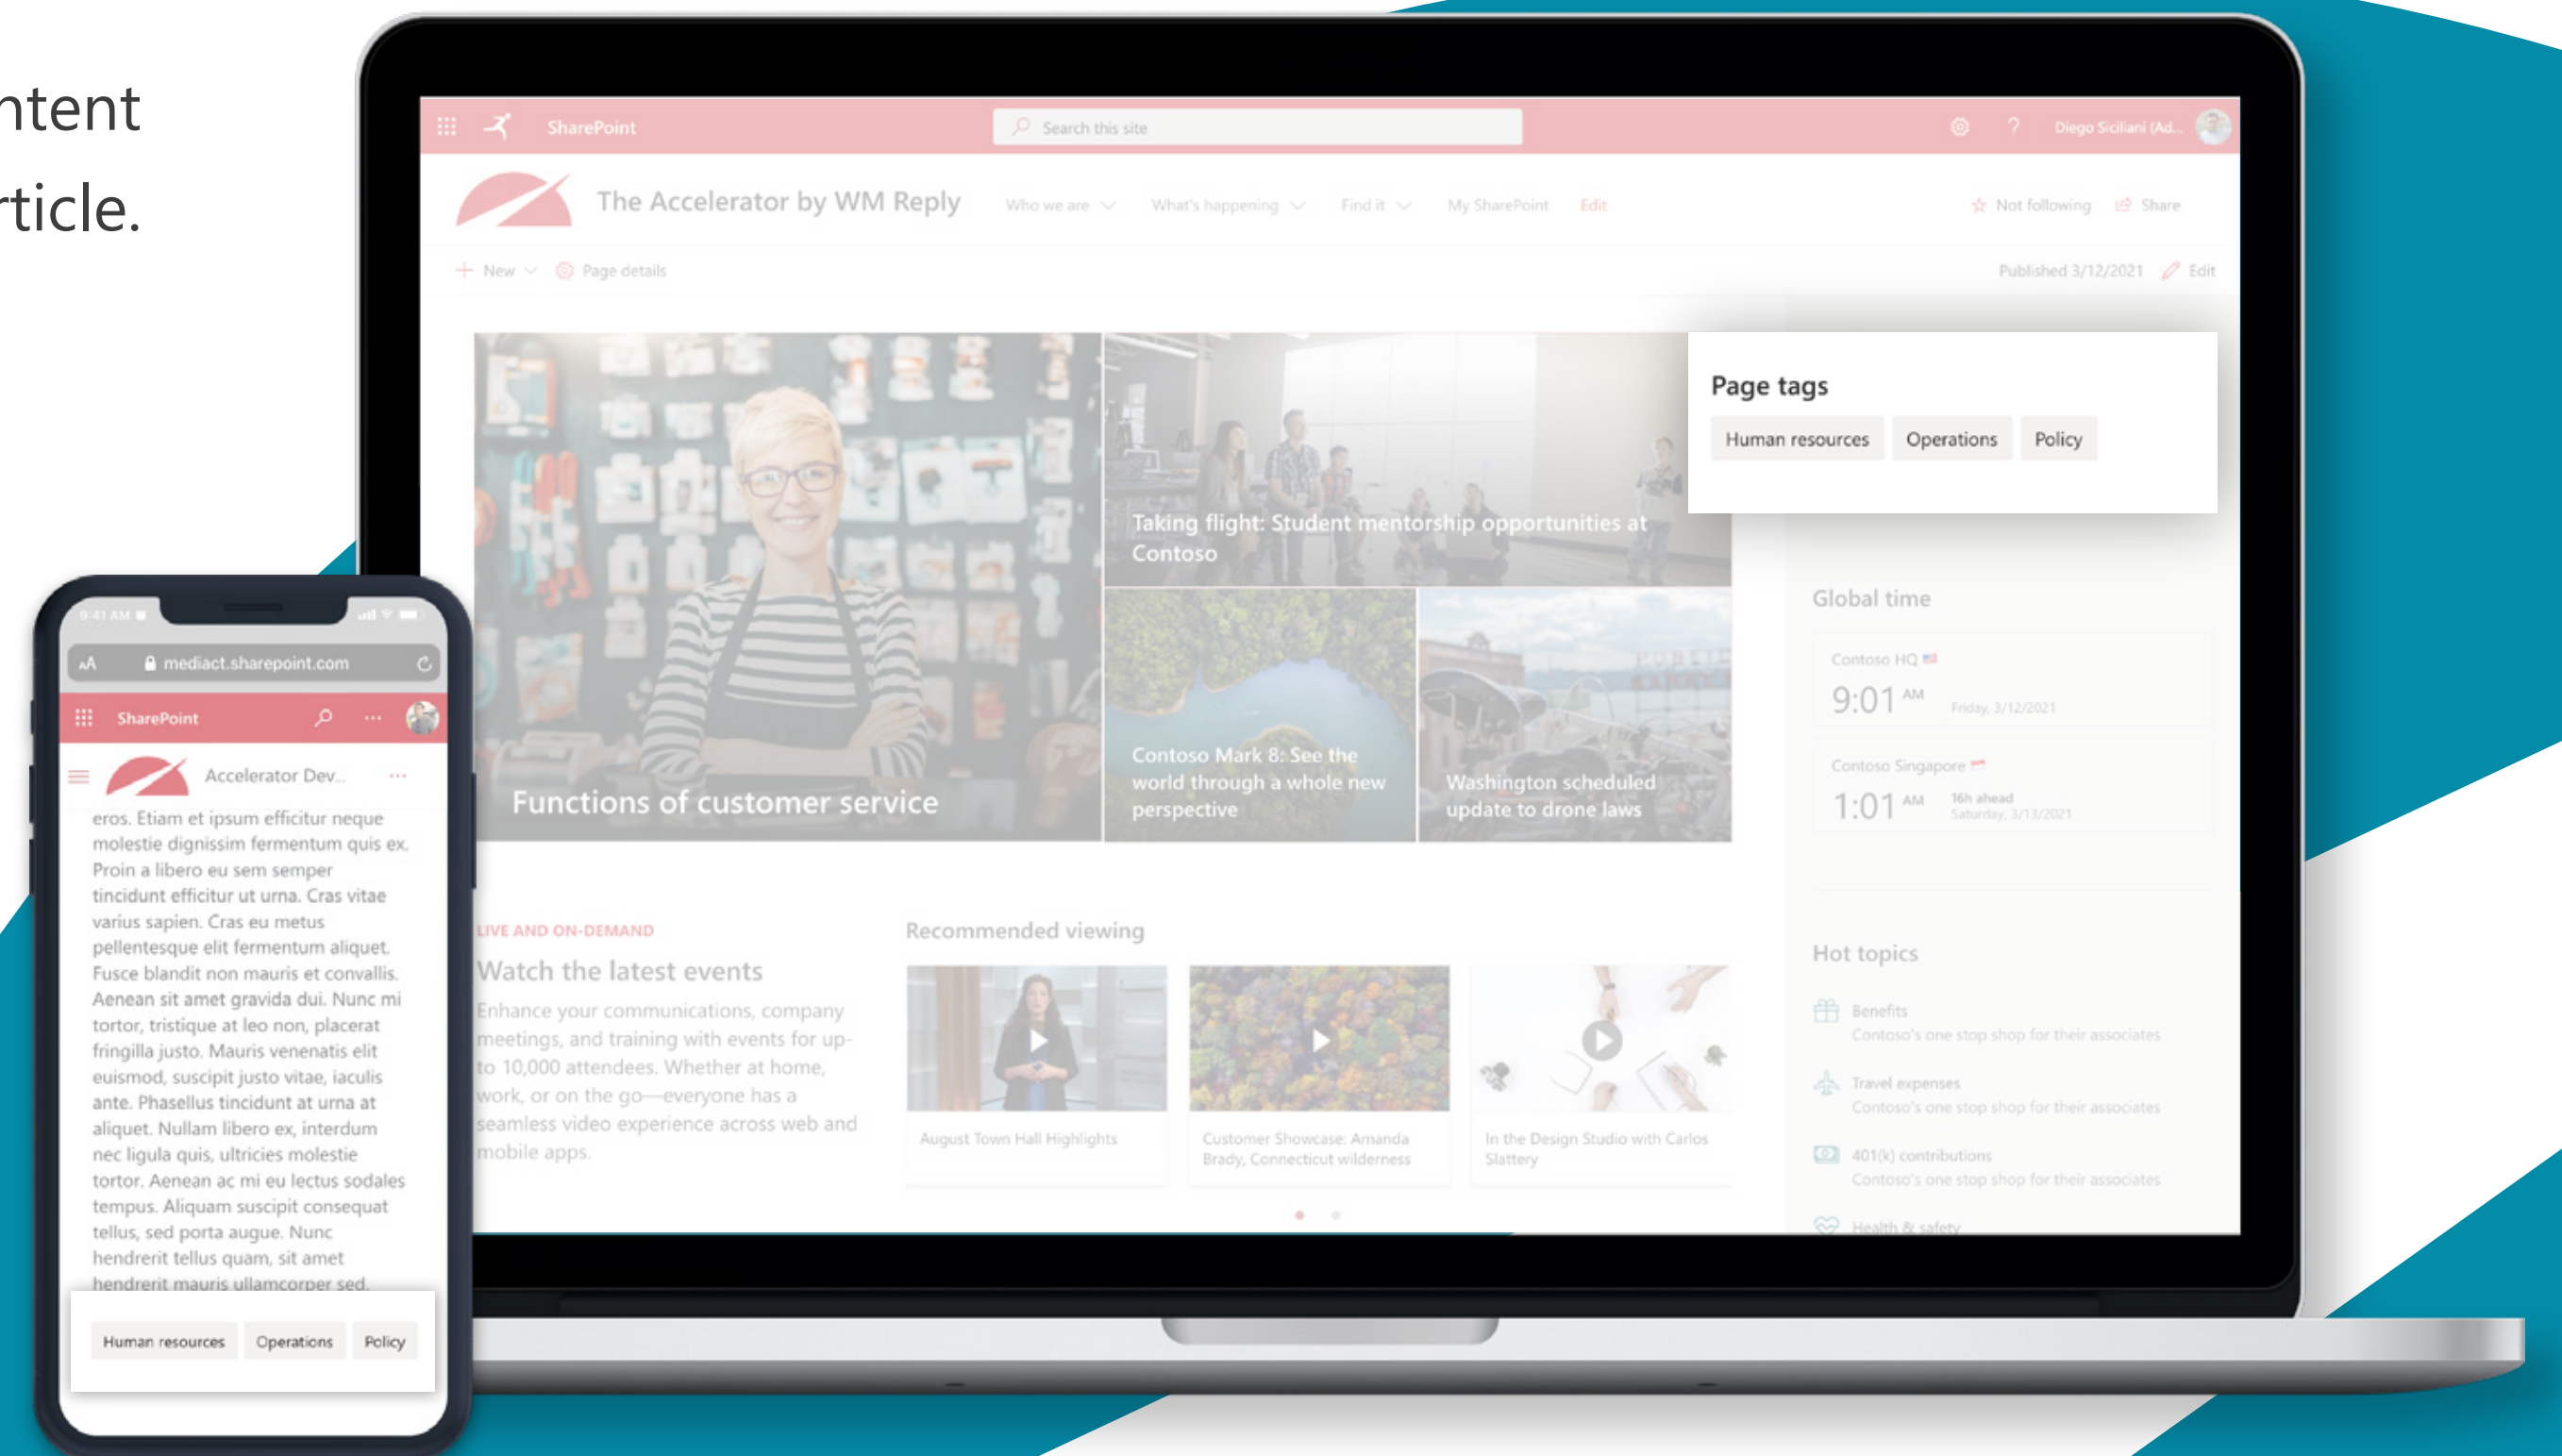

Page Tags

Great for: intranets, news, knowledge bases

The Page Tags web part is a simple and effective way to aid content discovery, providing a clear visual cue on each page or news article. Page Tags leverages out-of-the-box SharePoint metadata and search capabilities to allow you to integrate with either new or existing tags as your intranet content evolves.

Features

- Visually prominent and fully responsive to your page
- Integrates with new or existing page metadata
- Discover related content with SharePoint search
- Searchable across current sites, hubs, and the whole of SharePoint
