

Resilinc Agentic AI for Supply Chain Risk and Intelligence

Protect your supply chain with intelligent AI agents

Our platform

Meet your new digital supply chain team

Resilinc's Agentic AI platform is powered by intelligent agents—each trained to solve a specific supply chain challenge.

These agents aren't generic chatbots. They're autonomous assistants built on proprietary supply chain data, real-time event detection, and regulatory expertise. They deliver real-time answers, insights, and actions tailored to your industry's most pressing challenges—starting with UFLPA compliance and event disruption prioritization.

How it works

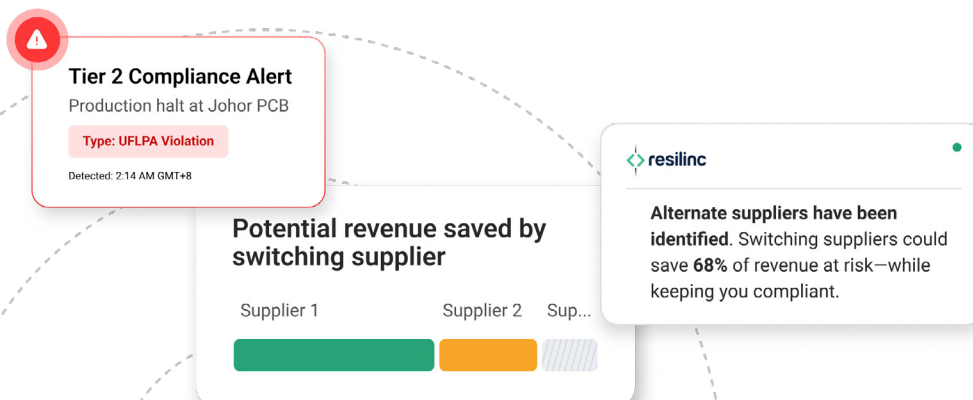

Why agentic AI?

Legacy tools weren't built for today's supply chain challenges—global complexity, shifting regulations, and nonstop disruption.

Agentic AI brings order to the chaos. Fast.

With a simple, human-like interface, Resilinc's AI agents answer urgent questions, guide your response when disruption hits, and streamline supplier collaboration.

Unlike static dashboards or generic chatbots, Agentic AI blends real-time data, proprietary risk models, and autonomous workflows—so you can act fast, stay compliant, and move with confidence.

Meet our agents

A growing library of purpose-built agents

Start with our UFLPA Agent, and expand as your needs evolve:

Confidently respond to forced labor inquiries, automate supplier verification, and stay audit-ready.

- Pinpoint risk and impacted suppliers
- Automate supplier evidence collection
- Access pre-trained intelligence aligned to UFLPA standards
- Stay ahead of audits, enforcement, and disruptions

The future of our agents

Built to scale

The UFLPA Agent is the first of many. Agentic AI is built to expand across critical domains, including:

- Tariff and trade policy impacts
- China +1 sourcing strategy
- Financial risk exposure
- Supplier viability and ESG compliance
- Disruption response and scenario planning
- Designed for scale across compliance, risk, and strategic planning.

What's my exposure to forced labor risk?

Forced labor risk: 62% — driven by low visibility in Tier 2 suppliers. Recommend initiating supplier audits.

✓ War Room Prioritization Agent

Protects your business with AI agents that scan over 100 million news sources daily on your behalf. You receive instant, contextual alerts with actionable recommendations, giving you critical visibility to respond before disruptions impact your operations.

✓ Forced Labor UFLPA Agent

Helps you maintain compliance with continuous monitoring of your supplier network for forced labor risks. When incidents escalate, collaborative war-room tools empower your team's swift response, protecting your brand and bottom line.

✓ Tariffs Agent

Keeps you one step ahead of changing trade policies with real-time tariff monitoring. Receive instant impact assessments, proactive sourcing alternatives, and route adjustments. Simulate scenarios to see how potential changes affect your bottom line before they happen.

Secure platform

Trust, transparency and data security

✓ No Data Sharing with LLMs:

Your data is never used to train large language models.

✓ Privacy by Design:

All customer data remains private, secure, and fully isolated.

✓ AI You Can Trust:

Recommendations are backed by clear rationale and proprietary supply chain logic.

✓ Human in the Loop:

You stay in control—agents guide and automate, but you approve actions.

Try it

Get a demo of our UFLPA agent

Start solving compliance headaches today—while building a foundation for future-proof supply chain intelligence.
