

Microsoft Security Workshop

Protect your organisation from growing cybercrime
and maximise your Microsoft 365 investment

How do you evaluate your organisation's Microsoft security posture accurately?

Your organisation's security posture is a key priority in the current climate...

You can evaluate threats and vulnerabilities with our Microsoft Security workshop. Together, we'll use Microsoft Secure Score to provide you with specific measures and metrics that pinpoint where weaknesses exist, and improvements can be implemented.

Following these recommendations, we will enable you to protect your organisation from cybersecurity threats and by utilising a centralised dashboard in the Microsoft 365 Defender portal you can monitor and work on the security of Microsoft 365 identities, apps, and devices across your organisation.

What is a Security Posture?

It is an organisation's overall cybersecurity strength, taking into account hardware, software, process, networks and service providers. As well as the organisation's ability to predict and respond to ever changing cyber-threats.

[LEARN MORE ABOUT THE WORKSHOP >>](#)

From the workshop you'll receive:

- A report on the current state of your organisation's security posture.
- Specific improvements to discoverability, visibility, guidance, and control for your security status
- Comparisons with benchmarks to establish key performance indicators (KPIs).
- Access to robust visualisations of metrics and trends, integration with other Microsoft products, score comparisons with similar organisations.

**How can the Microsoft
Security Workshop help you?**

How the Microsoft Security Workshop can help you

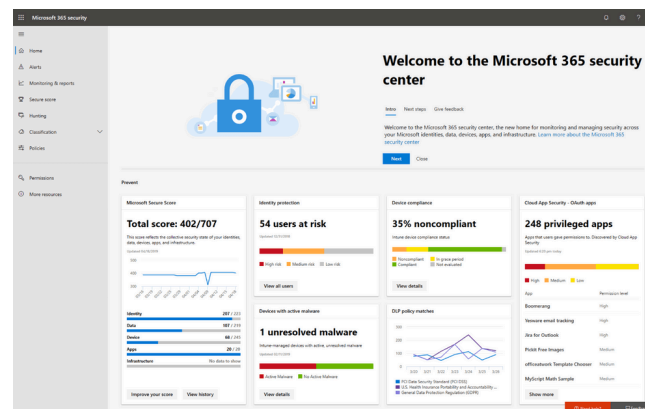

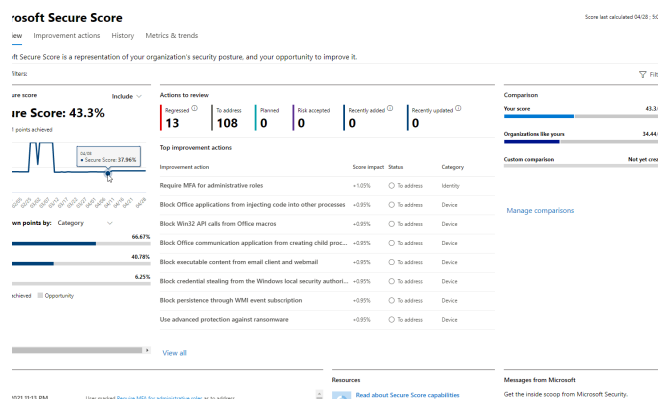

The workshop will give you insight into the extent to which your organisation has adopted security controls in your Microsoft environment that can help offset the risk of being breached.

Work with us to assess where your organisation currently stands, have your own verified assessment of the risks and review the recommendations that follow.

This could be a 3-5 day investment that provides protection and peace of mind for the year ahead in terms of your cybersecurity strategy.

Security workshop outline:

- Attend on-site or virtually
- Discovery, understanding & education session
- Questionnaire / discovery
- Statement of work
- Analysis of findings
- Presentation of findings, along with recommendations & our "Next Steps" report

How our customers have benefitted

COMPANY 1:

300-user software company operates in the global conferencing services market.

OBJECTIVES:

- Meet regulatory requirements e.g. achieve ISO270001 accreditation
- Demonstrate that Client data and solutions using Azure platform meet the right level of security.
- Review security posture after migration to Microsoft Office 365 and utilise full portfolio of M365 services.

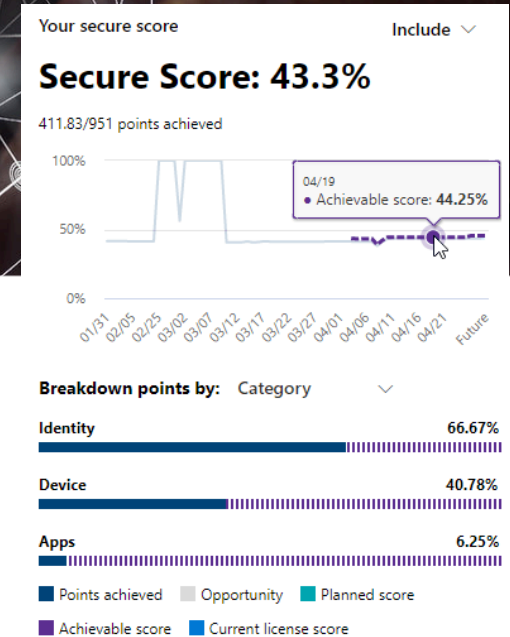

SOLUTION:

Ricoh quickly identified a low security rating and vulnerabilities in the legacy security protocols. A series of workshops demonstrated the M365 security capabilities and developed priority actions over a 6 month period.

Once the workshop was completed, Ricoh carried out the remediation activities working side by side to upskill the customers team.

TECHNOLOGIES:

Cloud app security, Windows Defender ATP, Intune & SCCM.

BENEFIT:

The customer is now progressing to achieve their ISO270001 accreditation and has confidence in their security within M365 and a defined roadmap to continue to build upon.

COMPANY 2:

A multinational logistics organisation and a long-standing customer of Ricoh.

OBJECTIVES:

- Understand the security service maturity following acquisition
- Protect the investment in the organisation
Mitigate risks highlighted by a 3rd party audit

SOLUTION:

Ricoh worked with the new Security team to align the business and the new security requirements utilising the wider Microsoft suite of security products. The Microsoft Security Workshop gave them a point in time status and a definitive plan of action based upon their specific needs.

TECHNOLOGIES:

Defender for Endpoint, Defender for Windows Servers, Defender for Office 365, Windows 10, Intune, MFA & CM.

BENEFIT:

The customer quickly understood where to focus their attention which led to a higher rate of adoption of the security and compliance features in M365. The business achieved Cyber Essentials Plus security rating and the organisation's confidence in their cloud security increased.

**Collaborate with a
partner for greater success**

At Ricoh, we have been successfully solving business technology problems for more than 80 years. We are a long-standing certified **Microsoft Gold Partner.**
