

Versa Networks' Security Posture Gets a Boost with Microsoft Defender for Endpoint

Zero trust foundation is the key to improving security posture of Versa Networks. By protecting endpoint devices, employees can work safely, knowing their data and work are protected not only in the cloud but also on local devices. As a value-added Microsoft partner in Modern Work domain, RITSnet helped Versa Networks onboarding around 500+ devices to Microsoft Defender for monitoring and protection from malware and other threats in real-time.

RITSNET, Versa Networks, and Microsoft Defender for Endpoint

Customer challenges

With the rise of remote work and the use of personal devices to connect to work networks, employees are more vulnerable than ever to cyber threats. Connecting to networks with non-secured devices can lead to employees unwittingly falling victim to phishing attacks, where attackers trick users into divulging passwords. Performing non-work-related tasks on company devices can increase the risk of cyber attacks. Therefore, it is crucial for Versa Networks to protect their employee devices.

Partner solutions

Microsoft Defender for Endpoint is an enterprise endpoint security. RITSnet proposed this solution to Versa Networks to help enterprise networks prevent, detect, investigate, and respond to advanced threats.

Customer benefits

With this solution in place, employees' devices are monitored and protected from cyber threats in real-time. It helps IT team to secure effortlessly employees' laptop. IT team can gain an upper hand against sophisticated cyberthreats such as ransomware. They can rapidly stop cyberthreats, elevate security posture.

Rich features supported with cost effective licensing model

Improve security posture starting with protection of endpoint devices in real-time. Free IT security team from simple tasks to focus on high priority tasks

Evolve security system beyond the endpoints and mature company security based on a foundation of extended detection and response and Zero Trust
