

SUPPLY CHAIN OPTIMIZATION SOLUTION

GET THE MOST VALUE FROM YOUR SUPPLY CHAIN DECISION-MAKING PROCESSES

Leverage your data to discover actionable, prescriptive insights and drive strategic organizational alignment through cloud-based analytics and customizable dashboards

Outdated decision-making methods cause inefficiencies and lost productivity for supply chains

A supply chain organization's data set is a rich source of valuable information which can provide operational insights that lead to increased revenue, improved margins, and better customer experience. However, without the appropriate analytics to provide forward-looking insights into trade-off decisions, companies fail to generate value from that data. Many organizations are still trying to make decisions using complex spreadsheet models, causing them to miss out on opportunities, inaccurately interpret information, increase costs, and lose productivity.

A proactive approach that ensures business value creation through advanced analytics

Bringing together strategic, industry expertise paired with application technology, West Monroe takes the guess work out of complex supply chain decision making. With over 50 years of cumulative manufacturing and distribution experience, West Monroe leverages River Logic's Supply Chain Optimization (SCO) innovative optimization technology to ensure organizations get unmatched value from their multi-source, supply chain data.

West Monroe can help you identify potential opportunities by empowering strategic decisions through the utilization of advanced analytics. Our team helps your organization identify and align on key operational priorities. We work to define business strategies and financial objectives and align them to the optimization model and scenarios analysis. With your team, we collect and load your supply chain data into the SCO solution and leverage the model capabilities to provide insights that support your organization's needs.

THE BOTTOM LINE

ORGANIZATIONS THAT IMPLEMENT THE SCO SOLUTION CAN EXPECT TO:

- See value add ranging from 10% reduction in costs to profit improvements equal to 1-2% of annual revenue
- Recognize a return on your investment in as little as 6 weeks
- Master decision-making agility by reducing the time it takes to create plans and respond to unforeseen events

A solution built for unique supply chain business needs

The resulting customizable dashboards are equipped with different drill-down capabilities via Microsoft PowerBI reports, such as scenario comparisons, financial summaries and prescriptive actions, and results for operational and financial improvement within the supply chain.

Utilization of the River Logic SCO solution enables organizations to:

- ◆ Instantly understand the value or cost of your decisions to find ways to better use existing resources within the unique constraints of your business
- ◆ Balance multiple competing objectives, such

- as lowering costs, improving service levels, boosting margins, and right-sizing inventory
- ◆ From supplier to customer, use rapid scenario analysis to respond to unforeseen changes, like natural disasters or new market share opportunities, without sacrificing key performance objectives
- ◆ Spend less time wrangling spreadsheets and data and more time exploring the answers to new questions
- ◆ Operate with one source of truth to build accountability and trust among business functions
- ◆ Leverage the business and industry expertise of West Monroe’s supply chain capabilities and Operations Excellence practice for a defined methodology and roadmap approach to supply chain and organizational transformation
