Microsoft Agent 365 Solutions

protiviti®
Global Business Consulting

As AI agents rapidly move from experimentation to operating as autonomous digital workers, organizations struggle to maintain governance, security, and visibility at scale. Microsoft Agent 365 addresses this challenge by delivering an enterprise-grade control plane that enables organizations to centrally manage, govern, and trust AI agents across Microsoft 365.

Client Challenges

Lack of visibility into AI agents: Organizations lack centralized visibility into the AI agents operating across teams, tools, and environments.

Insufficient governance for non-human actors: Traditional IT controls weren't designed to govern autonomous AI agents with identity, access, and lifecycle needs.

Security and compliance risks: Autonomous agents increase the risk of data exposure, unauthorized access, and compliance violations.

Inability to scale beyond pilots: Organizations struggle to safely scale AI agents from experimentation to enterprise-wide adoption.

Business Outcomes

- ✓ **Confident, scalable AI adoption:** Move AI agents from pilot to production through a single control plane.
- ✓ **Reduced risk and stronger compliance:** Secure AI agents with enterprise identity, security, and audit controls.
- ✓ **Centralized visibility and accountability:** Get a single source of truth for AI agent ownership and usage.
- ✓ **Faster time to value:** Deploy and scale AI agents quickly with standardized governance.
- ✓ **Improved IT and security efficiency:** Manage AI agents using existing Microsoft security and admin tools.
- ✓ **Measurable business impact and ROI:** Track agent performance to scale high-value use cases and retire the rest.

Protiviti helps organizations securely adopt and scale AI agents using Microsoft Agent 365 by delivering governance strategy, pilot implementation, and enterprise controls. Our team enables customers to move quickly from experimentation to secure, observable, and audit-ready agent operations.

Get Started with Protiviti's Agent 365 Foundation Assessment & Roadmap

Protiviti's Agent 365 Foundations Assessment & Roadmap helps organizations gain early visibility and control of AI agents so they can scale securely and confidently.

Objectives

- Understand current Microsoft agent governance landscape
- Discovery of current technical controls for agents in Production M365 tenant
- Establish understanding of Agent 365 capabilities
- Breakdown roles/responsibilities required to support Agent 365
- Mapping Agent 365 features to current M365 tenant
- Identify initial use cases to implement Agent 365
- Deliver a pilot program for Agent 365
- Provide an Agent 365 controls implementation roadmap

Customer Benefits

- Agent governance pain points aligned to Agent 365 solutions
- Technical workshops for Agent 365
- Role playbook for Agentic AI administrator roles (RACI)
- Foundational policies and procedures for agent governance
- Identification of existing Agents in M365 via Agent 365 pilot
- Gap analysis of Agent 365 features vs identified requirements
- Documented strategy for Agent 365
