

Microsoft Solution Assessment Program

Actionable Assessments to Support Your Journey in the Cloud

Today's new reality can be complex no matter where you're at in your cloud journey. Capitalizing on the shift to digital modernization is key to your organization's innovation and growth, but it can be daunting knowing where to start.

Microsoft's Solution Assessments are personalized, Microsoft-funded programs* that assess a customer's data landscape, analyze the deployed environment and provide insights for recommendations. Each assessment will help determine actionable steps for digital transformations, cloud migrations and enhanced security posture. Solution Assessments harness the power of technology for continued business success—stability, productivity, innovation, collaboration, and growth that will define your organization's future.

Assessments to Meet Your Organization's Needs

Microsoft Solution Assessments will deliver insights specific to your organization, your infrastructure, and your business requirements. You choose the best assessment type to align with your organization's priorities.

ARE YOU PLANNING A CLOUD MIGRATION?

Your successful business strategy requires in-depth understanding of the opportunities available to improve productivity, reduce costs, and optimize investments. Solution Assessments utilize cutting edge tools to review your current business landscape, analyze your data estate, and provide actionable, data-backed recommendations.

ARE YOU LEVERAGING INCREASED CLOUD SECURITY PROTOCOLS?

Cyber security is top of mind for CIOs, CISOs, CTOs, and business leaders in every industry. The threat of cyber-attacks is an ever-changing landscape and requires proactive mitigation planning. The impacts of a cyber hack can be devastating to customer trust and potential for significant business interruption leading to material revenue loss.

ARE YOU ABLE TO VALIDATE YOUR CLOUD INVESTMENT?

Your successful business strategy requires in-depth understanding of the opportunities available to improve productivity, reduce costs, and optimize investments. Microsoft Solution Assessments provide customers with detailed analysis based on real time data to understand total cost of ownership, and cost savings.

Microsoft Solution Assessment Programs

Our portfolio of Microsoft Solution Assessments is designed to meet your organization where you are on your cloud adoption and digital transformation efforts. Each assessment is a collaboration between Protiviti, Microsoft and your team. Together, we will move through a phased approach to deliver the business insights you need.

Holistic Business Case Assessment

The Holistic Business Case Assessment helps customers with limited cloud adoption plan their move with confidence. The Assessment provides an **end-to-end view across your IT landscape**, covering infrastructure, databases, and applications and provides a financial business case to migrate or modernize your IT estate.

Data & Infrastructure Migration Assessment

The Data & Infrastructure Migration Assessment helps customers **take the first step in their migration** once planning is complete. The Assessment provides a comprehensive review of customer's infrastructure and databases which helps prioritize initial migration workloads to the cloud.

Applications & Database Modernization Assessment

Aging systems and legacy applications cannot take full advantage of today's customer-centric technologies, like cloud and mobile computing. The **Application Assessment** provides an in-depth identification and analysis of a specific **application for migration to Azure** complete with business case, architecture design, and migration plans.

Analytics Assessment

The Analytics Assessment is designed for customers who wish to modernize their legacy **data platform** to one which leverages native Azure services. The Assessment provides a plan to modernize the data estate in Azure complete with production ready proof-of-concept, and hands-on training to show the power of **data in Azure**.

Modern Workplace Assessment

This Assessment helps customers understand the **collaboration tools** and technology available for improving productivity and suggesting recommendations to optimize security in Microsoft 365. This analysis will help maximize the value of investments by identifying opportunities to reduce duplicative costs.

Cloud Security Assessment

This Assessment will evaluate the **security posture**, **identify potential vulnerabilities and risks**, and provide mitigation recommendations across the Microsoft stack. You will receive a comprehensive look at the cybersecurity infrastructure and deliver key insights to help establish the right processes for cyber-risk reduction in the cloud.

Contact us today to schedule your Solution Assessment

As a Managed, Microsoft Solution Partner, Protiviti is uniquely qualified to deliver Microsoft-funded* Solution Assessments to eligible organizations. Contact us today to determine which assessment will meet your business needs and to schedule time with an expert.
