

RSM's Asset Management Proof of Concept

Take the first step in learning the benefits of an integrated Asset Management System and the true cost of asset ownership

RSM's Asset Management PoC will allow an organization more efficient use of time while determining the feasibility of using Asset Management.

ABOUT RSM's Asset Management Proof of Concept

Asset Management will aid organizations that have realized the benefits of Microsoft Dynamics 365 Finance and Dynamics 365 Supply Chain Management to realize optimized and efficient maintenance practices. If you are currently performing maintenance using a 3rd party software or pen-and-paper system, you are not truly realizing the benefits of an integrated Enterprise Asset Management system. The Dynamics 365 Asset Management solution will add value to your organization by allowing users to know the true costs of maintaining your facility and assets from acquisition to retirement.

The D365 Asset Management solution will not only manage the asset maintenance of physical assets, but also allows users to realize the total cost of ownership of their assets. This will include work order management of both preventive and reactive maintenance, planning and scheduling with visibility to production and spare parts inventory, warranties, fault management, downtime, safety and jurisdictional compliance. The possibilities to make data driven decisions about assets using will be greatly increased and Reliability Centered Maintenance can be performed.

RSM's RVM (Rapid Verification Model) for Asset Management uses proven maintenance processes, data and system configurations to make this Proof of Concept possible. This includes help content for each standard process.

WHAT RSM OFFERS

Timeline & Approach

- 2-week timeline
- D365 F&SC must be deployed
- Dependent on RSM's Rapid Verification Model
- Performed in a non-production environment with data provided by client
- Success criteria will be defined as part of the Statement of Work

Scope

- Requirements gathering
- Maintenance & business process review
- Asset register review
- Work order process review
- Demonstration of Asset Management functionality with client data
- Follow-up with "Lunch & Learn" sessions

Functionality

- Fully integrated module within D365 F&SC
- No integrations with financial software needed
- Leverages Warehouse and Inventory Management, Procurement, Finance, Production, Human Resources, Projects and Organization Administration modules

Perks

- True asset ownership cost realization
- Preventive, Predictive and Reactive Work Order Management
- Maintenance planning and scheduling
- Data driven decision making
- Reliability Centered Maintenance compliant
