

Rubicon M365 Data Modernizer

The number of documents and information within Microsoft 365 environments is growing by the day. In order to keep data manageable, it need to be enriched.

The Rubicon M365 Data Modernizer, will configure the capability within your tenant to enrich your documents and information (automatically or manually). By doing so, this will protect, retain and prevent data leakage. Users will save time searching for the right documents or information and they have no longer to worry about when and how to classify their documents or enrich information with metadata.
