The Rubicon Scan To Teams Migration Accelerator

Personal drives, Department drives and Company file-server storage drives, we all know and most likely still use them. Migrating local file-server data into the Microsoft cloud can be time consuming, complex and expensive. But using "The Rubicon Scan To Teams Migration Accelerator" will make complex migrations a thing of the past.

The Rubicon Scan To Teams Migrations Accelerator scans, creates and migrates local file-server storage locations directly into new Microsoft Teams. Based on usage, date last modified, folder structure and by using the latest migration technology data is migrated and new Teams environments are created. Follow the progress by using the powerful user-friendly dashboards, see how much and which data has been migrated, how much still needs to be migrated and which environments are ready for use.

Why customers use The Rubicon Scan To Teams Accelerator
