

AP Automation

AP Automation: Main features

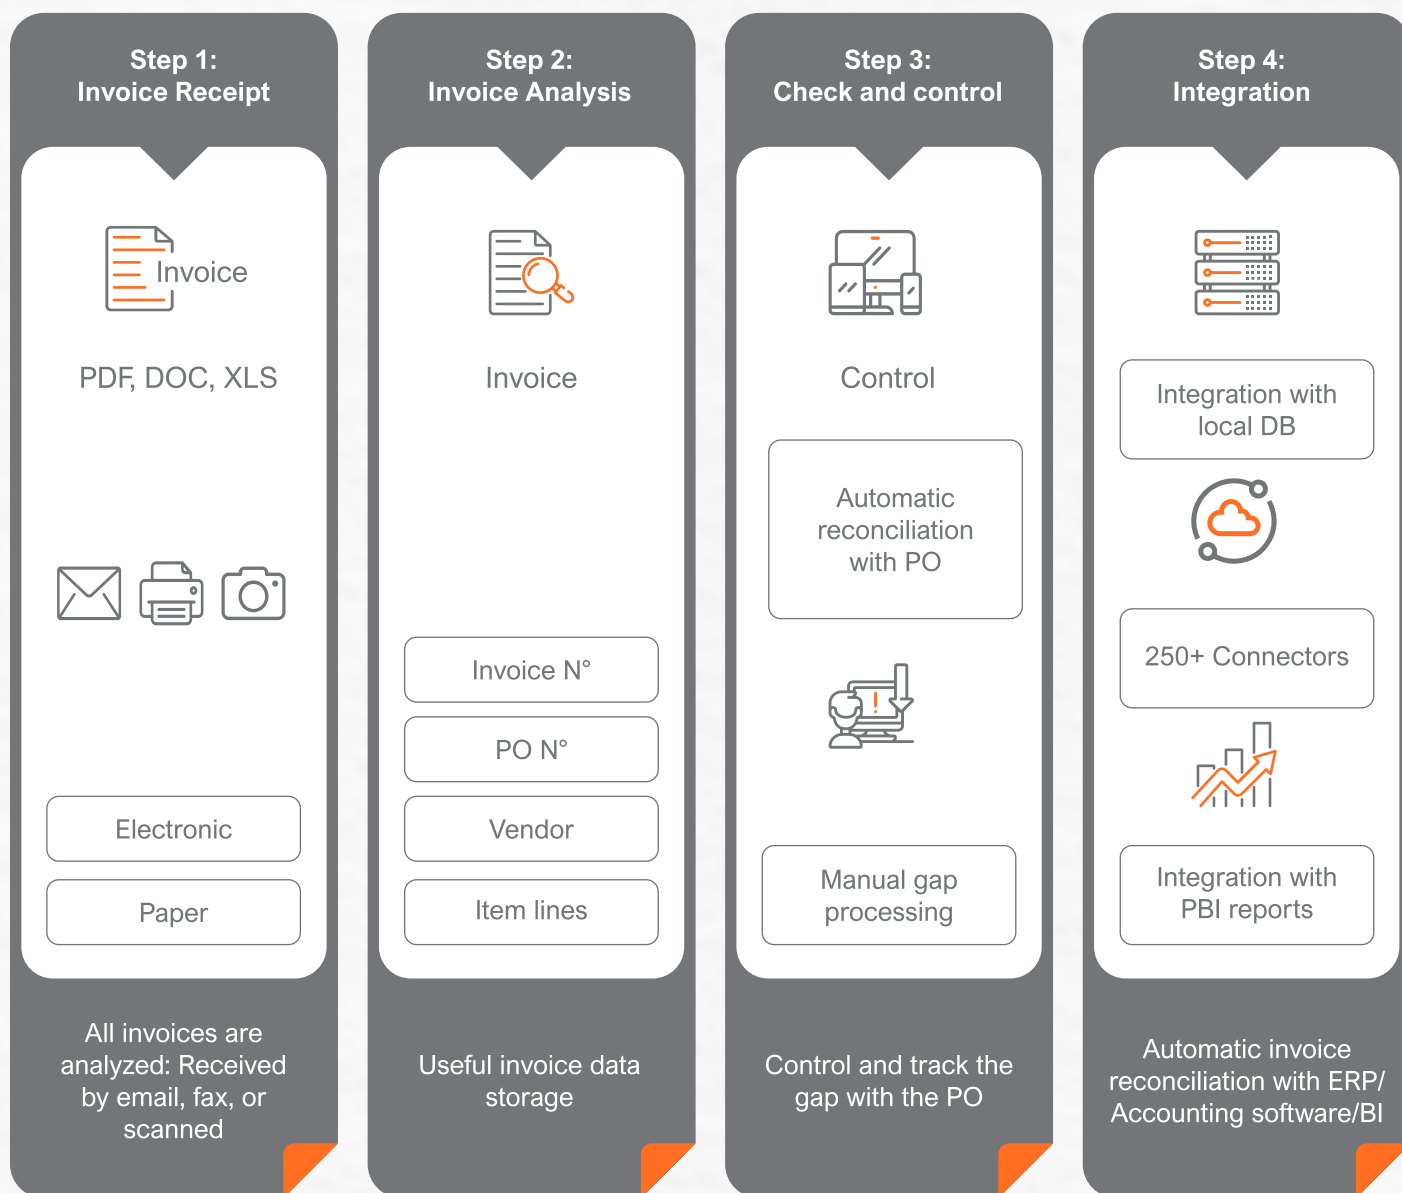

- Automation of the processing of scanned or electronic invoices received by email.
- With AI, the invoice data is captured, stored, and reconciled with your ERP data.
- A Microsoft Power Apps interface allows the user to process any discrepancies in order to integrate the invoice with your ERP or accounting software.

Why choose AP Automation?

The AP Automation solution is based on Microsoft Power Platform technology, allowing your organization to leverage AI combined with Power Automate and Power Apps in order to automate the vendor data capture, the reconciliation with your ERP data (purchase and /or receipt order) to show only the lines that present discrepancy for processing. All invoices that do not have a discrepancy with the purchase and /or receipt order can be automatically integrated into the ERP.

Different solutions are available to receive the invoices, whether they are in a hard copy format to be scanned and saved in a OneDrive directory, taken in photo via the Power Apps application, or electronic version received by email. Power Automate enables you to automate the processing to analyze the invoice and save its data while retrieving the purchase/receipt order from your ERP for reconciliation.

Turn outdated into automated

Discover a better way to get things done across your organization

Automate quickly and more securely

Empower everyone to build automated processes using low-code, drag-and-drop tools. With hundreds of pre-built connectors, thousands of templates, and AI assistance, it's easy to automate repetitive tasks.

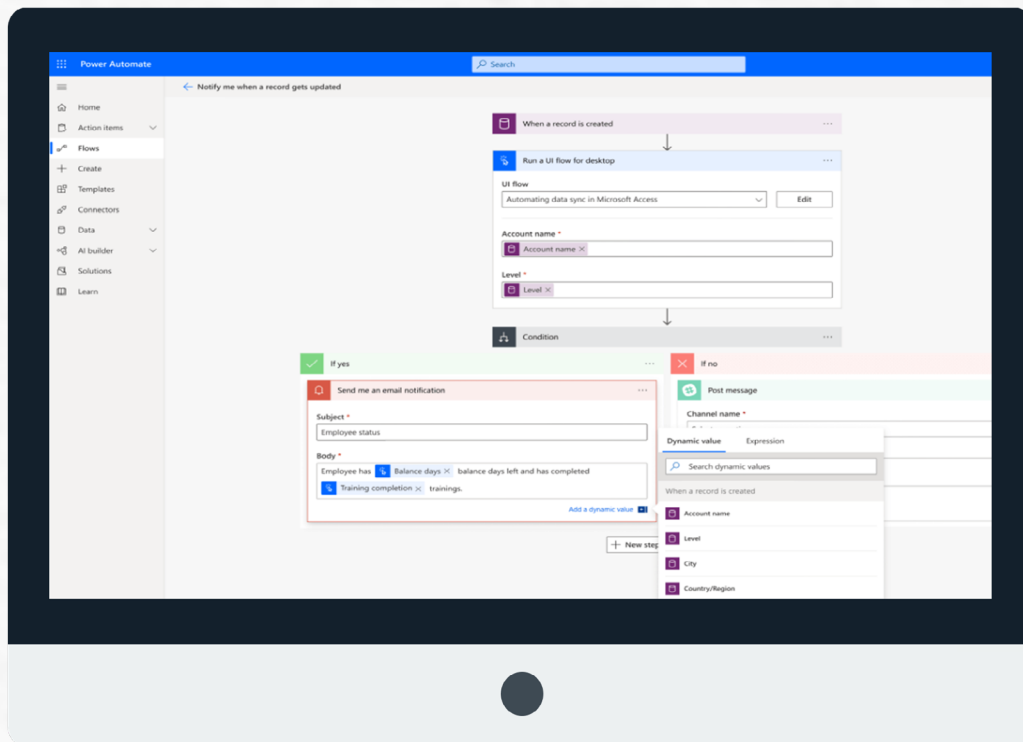

Boost efficiency

Record and visualize end-to-end processes using process and task mining with process advisor. It takes the guesswork out of what to automate by providing guided recommendations for creating flows.

Enhance workflows with AI

Quickly process forms using document automation, plus process approvals, detect images and text, or create with prebuilt models.

About sa.global

Founded in 1990, sa.global is one of the world's leading Microsoft partners, helping more than 800,000 users of Microsoft solutions in more than 80 countries around the world every day to deliver operational excellence and financial performance to their businesses.
