

# Translate your reports in a matter of seconds

Easily translate display elements in Power BI reports **into almost any language**. An average person is able to manually translate 1 page of a report in 30 minutes. Power Translate automatically processes **5 pages in 30 seconds**.

**With Power Translate you are able to modify translated phrases according to company's nomenclature.**

Save your time and money.  
Get the information faster.

**Power Translate** is an on-line tool created to help you quickly translate elements such as **titles, headers, name of measures etc.** in **Power BI** reports. The tool supports most of the world's languages.

**Power Translate** tool offers two modes: automatic and manual.

- In automatic mode you just need to upload a .pbit file, select languages and hit the button. That's all. You receive a new **.pbit** file with all of the labels translated **into the chosen language**.
- Manual mode allows you to make changes in translated phrases. As a result you get an editable **.xlsx** file with a translated report's dictionary. You can also decide to receive only phrases exported from the report. This feature is especially useful if your company is **using custom nomenclature**.

We deliver modern solutions supporting sales, data integration and analytics. From the sales support system, through address databases, data integration services, to an advanced analytical environment.
