

Salto for MS Entra ID

Protect your Entra ID with automated configuration backup and stress-free recovery.
Automatically copy changes between tenants, plan changes and understand configuration dependencies

[Request a demo](#)

Configuration backup and restore

Back up your configuration and restore from previous version to minimize downtime, or pick and choose a bad change to revert.

Reduce risk of errors

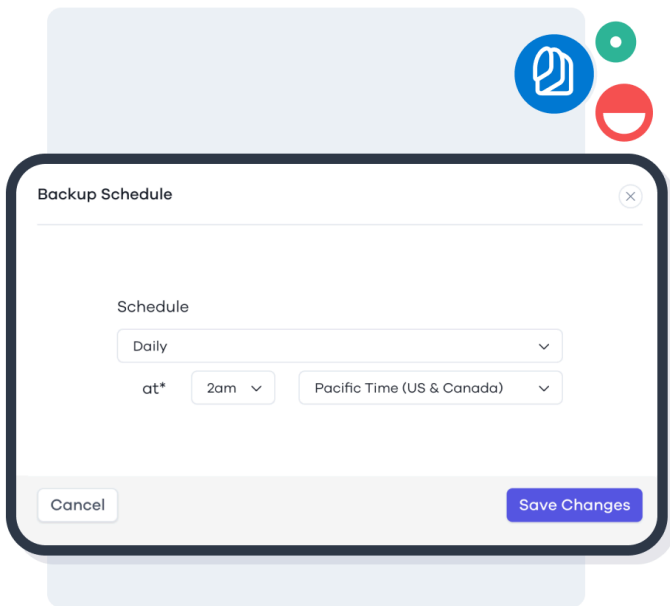

Plan changes with full visibility of your configuration, test changes before they go live without impacting production and monitor changes made by others.

Automate your manual tasks

Streamline time consuming and error prone manual processes like copying changes between tenants, documenting changes, making bulk changes and more.

Backup your configuration

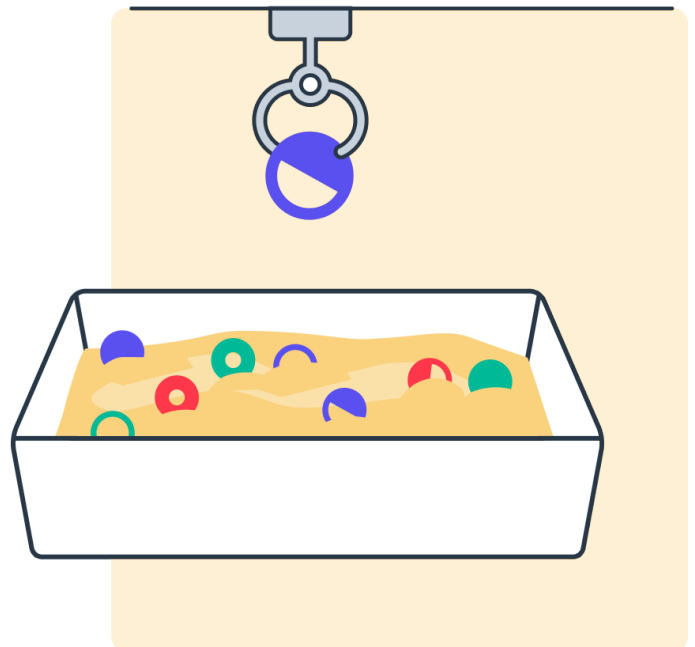

Easily restore your configuration from a previous version to ensure availability and integrity of your Entra ID objects. Schedule configuration backup up to an hourly frequency and with extensive type coverage.

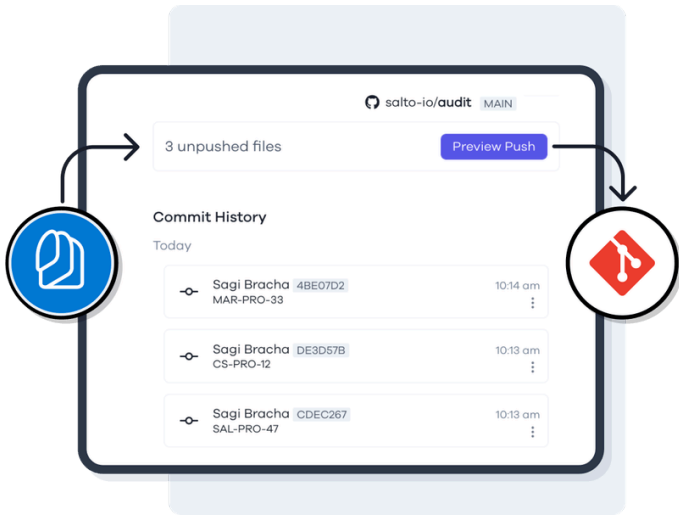

.....

Pick and choose what you want to deploy

Be completely selective about what you want to deploy to production. Pick and choose only the elements that are ready to move to your production tenant without disrupting ongoing development work.

.....

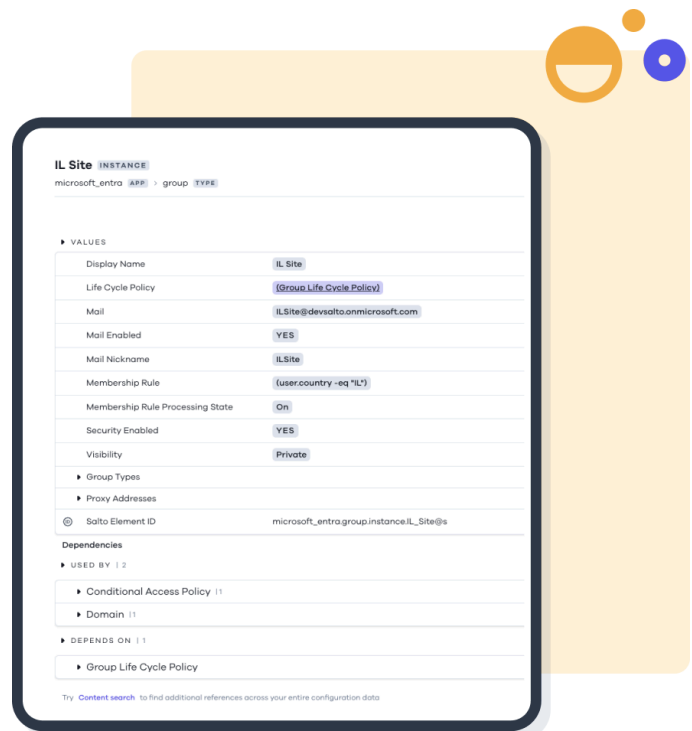

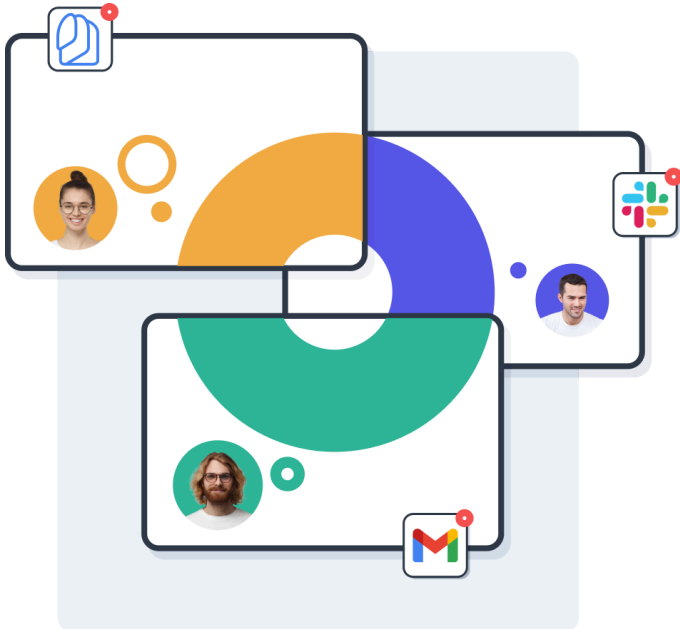

Complete change tracking via version control

Gain comprehensive control over your configuration with detailed tracking of changes.

Search your configuration and understand how everything connects

Salto automatically surfaces dependencies in your configuration. Use text search to find where your applications, policies and groups are used and explore dependencies between them. See their references and how they compare across tenants and make bulk changes easily with Find and Replace.

Get alerts on changes in your Entra ID tenant

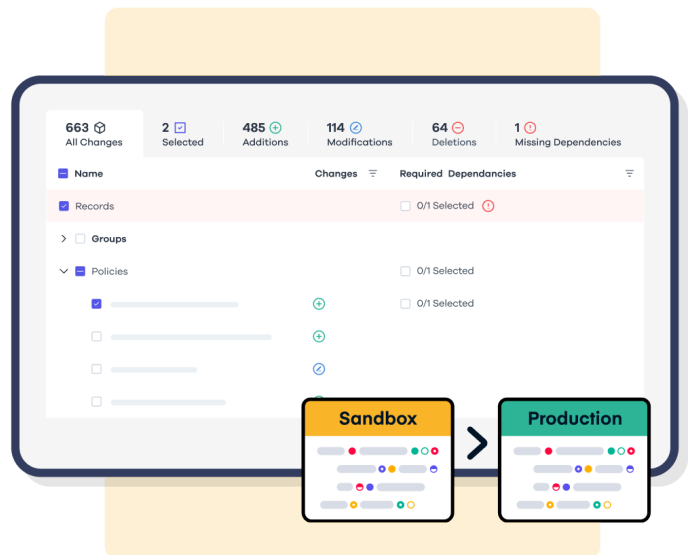

Easily set up alerts for modifications made in your tenant, ensuring that you always remain in control of what's happening to policies, MFA settings, compliance configurations and other objects.

.....

Push configuration changes between tenants

Seamlessly move configurations between any two tenants in a single action. Easily keep your test tenants in sync with your production, so you never have to re-build from scratch.

.....

Use Salto for all your enterprise applications
