SAP Data Custodian

WHAT WE OFFER

Protect your data in the cloud with SAP Data Custodian

SAP Data Custodian delivers five primary benefits:

Transparency / Audit Reporting

Create policies to monitor your data in terms of data access and data placement for your full cloud stack including infrastructure and applications layers. This includes accesses from the Cloud Provider side.

Contextual Application Control

Create contextual application control policies to help comply with your data protection regulations and business compliance needs. Create access policies based on user context including location, citizenship, department,

Data Localization

Create data residency control policies to restrict storage of your all data or a specific category of data in a particular country or a set of countries based on your data sovereignty requirements.

Customer Controlled Encryption Keys

Get full control over your data encryption keys for SAP Applications with SAP Data Custodian Key Management Service. You manage complete lifecycle of your data encryption keys

Policy Templates

Make regulatory compliance (GDPR, CCSL CCRF, PCI and more) in the cloud easier with policy templates, data classification, and more

WHAT OUR CUSTOMERS ARE SAYING
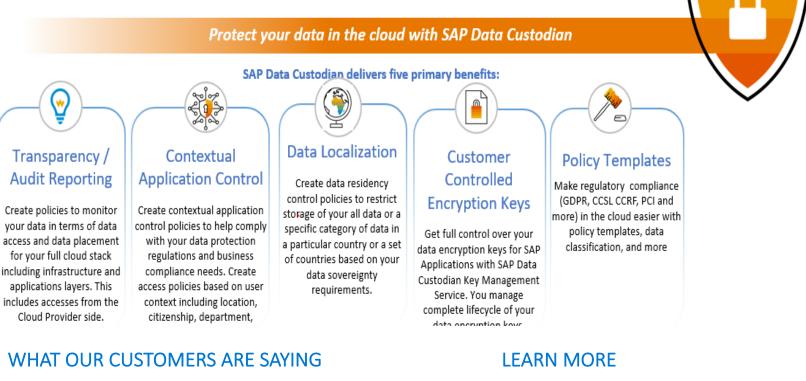

"Paste in a customer reference quote about the application that will fill this column. Paste in a customer reference quote about the application that will fill this column. Paste in a customer reference quote about the application that…"
